Explosive. Any substance classified as an explosive by the Department of Transportation in 49 CFR 173.53, 173.88, and 173.100. This document is available at any MSHA Metal and Nonmetal Safety and Health district office.

Explosive material. Explosives, blasting agents, and detonators.

Flash point. The minimum temperature at which sufficient vapor is released by a liquid to form a flammable vapor-air mixture near the surface of the liquid.

Igniter cord. A fuse that burns progressively along its length with an external flame at the zone of burning, used for lighting a series of safety fuses in a desired sequence.

Laminated partition. A partition composed of the following material and minimum nominal dimensions: ½-inch-thick plywood, ½-inch-thick gypsum wallboard, ⅛-inch-thick low carbon steel, and ¼ inch thick plywood, bonded together in that order. Other combinations of material may be used, such as plywood, wood, or gypsum wallboard as insulators, and steel or wood as structural elements, provided that the partition is equivalent to a laminated partition for both insulation and structural purposes as determined by appropriate testing. The Institute of Makers of Explosives (IME) 22 container or compartment, described in IME Safety Library Publication 22 (Jan. 1985), meets the criteria of a laminated partition. This document is available at any MSHA Metal and Nonmetal Safety and Health district office.

Loading. Placing explosive material either in a blasthole or against the material to be blasted.

Magazine. A bullet-resistant, theft-resistant, fire-resistant, weather-resistant, ventilated facility for the storage of explosives and detonators (BATF Type 1 or Type 2 facility).

Misfire. The complete or partial failure of explosive material to detonate as planned. The term also is used to describe the explosive material itself that has failed to detonate.

Multipurpose dry-chemical fire extinguisher. An extinguisher having a rating of at least 2–A:10–B:C and containing a nominal 4.5 pounds or more of dry-chemical agent.

Primer. A unit, package, or cartridge of explosives which contains a detonator and is used to initiate other explosives or blasting agents.

Safety switch. A switch that provides shunt protection in blasting circuits between the blast site and the switch used to connect a power source to the blasting circuit.

Slurry. An explosive material containing substantial portions of a liquid, oxidizers, and fuel, plus a thickener.

Storage facility. The entire class of structures used to store explosive materials. A "storage facility" used to store blasting agents corresponds to a BATF Type 4 or 5 storage facility.

Water gel. An explosive material containing substantial portions of water, oxidizers, and fuel, plus a cross-linking agent.

Storage

§ 56.6100 Separation of stored explosive material.

(a) Detonators shall not be stored in the same magazine with other explosive material.

(b) When stored in the same magazine, blasting agents shall be separated from explosives, safety fuse, and detonating cord to prevent contamination.

§ 56.6101 Areas around explosive material storage facilities.

(a) Areas surrounding storage facilities for explosive material shall be clear of rubbish, brush, dry grass, and trees for 25 feet in all directions, except that live trees 10 feet or taller need not be removed.

(b) Other combustibles shall not be stored or allowed to accumulate within 50 feet of explosive material. Combustible liquids shall be stored in a manner that ensures drainage will occur away from the explosive material storage facility in case of tank rupture.

§ 56.6102 Explosive material storage practices.

(a) Explosive material shall be—

(1) Stored in a manner to facilitate use of oldest stocks first;

(2) Stored according to brand and grade in such a manner as to facilitate identification; and

(3) Stacked in a stable manner but not more than 8 feet high.

(b) Explosives and detonators shall be stored in closed nonconductive containers except that nonelectric detonating devices may be stored on nonconductive racks provided the case-insert instructions and the date-plant-shift code are maintained with the product.

§ 56.6130 Explosive material storage facilities.

(a) Detonators and explosives shall be stored in magazines.

(b) Packaged blasting agents shall be stored in a magazine or other facility which is ventilated to prevent dampness and excessive heating, weather-resistant, and locked or attended. Drop trailers do not have to be ventilated if they are currently licensed by the Federal, State, or local authorities for over-the-road use. Facilities other than magazines used to store blasting agents shall contain only blasting agents.

(c) Bulk blasting agents shall be stored in weather-resistant bins or tanks which are locked, attended, or otherwise inaccessible to unauthorized entry.

(d) Facilities, bins or tanks shall be posted with the appropriate United States Department of Transportation placards or other appropriate warning signs that indicate the contents and are visible from each approach.

§ 56.6131 Location of explosive material storage facilities.

(a) Storage facilities for any explosive material shall be—

(1) Located so that the forces generated by a storage facility explosion will not create a hazard to occupants in mine buildings and will not damage dams or electric substations; and

(2) Detached structures located outside the blast area and a sufficient distance from powerlines so that the powerlines, if damaged, would not contact the magazines.

(b) Operators should also be aware of regulations affecting storage facilities in 27 CFR part 55, in particular, §§ 55.218 and 55.220. This document is available at any MSHA Metal and Nonmetal Safety and Health district office.

§ 56.6132 Magazine requirements.

(a) Magazines shall be—

(1) Structurally sound;

(2) Noncombustible or the exterior covered with fire-resistant material;

(3) Bullet resistant;

(4) Made of nonsparking material on the inside;

(5) Ventilated to control dampness and excessive heating within the magazine;

(6) Posted with the appropriate United States Department of Transportation placards or other appropriate warning signs that indicate the contents and are visible from each approach, so located that a bullet passing through any of the signs will not strike the magazine;

(7) Kept clean and dry inside;

(8) Unlighted or lighted by devices that are specifically designed for use in magazines and which do not create a fire or explosion hazard;

(9) Unheated or heated only with devices that do not create a fire or explosion hazard;

(10) Locked when unattended; and

(11) Used exclusively for the storage of explosive material except for essential nonsparking equipment used for the operation of the magazine.

(b) Metal magazines shall be equipped with electrical bonding connections between all conductive portions so the entire structure is at the same electrical potential. Suitable electrical bonding methods include welding, riveting, or the use of securely tightened bolts where individual metal portions are joined. Conductive portions of nonmetal magazines shall be grounded.

(c) Electrical switches and outlets shall be located on the outside of the magazine.

§ 56.6133 Powder chests.

(a) Powder chests (day boxes) shall be—

(1) Structurally sound, weather-resistant, equipped with a lid or cover, and with only nonsparking material on the inside;

(2) Posted with the appropriate United States Department of Transportation placards or other appropriate warning signs that indicate the contents and are visible from each approach;

(3) Located out of the blast area once loading has been completed;

(4) Locked or attended when containing explosive material; and

(5) Emptied at the end of each shift with the contents returned to a magazine or other storage facility, or attended.

(b) Detonators shall be kept in separate chests from explosives or

VOL 58 ISS 249 DEC 30 1993 UMI

blasting agents, except if separated by 4 inches of hardwood, laminated partition, or equivalent.

Transportation

§ 56.6200 Delivery to storage or blast site areas.

Explosive material shall be transported without undue delay to the storage area or blast site.

§ 56.6201 Separation of transported explosive material.

Detonators shall not be transported on the same vehicle or conveyance with other explosives except as follows:

(a) Detonators in quantities of more than 1000 may be transported in a vehicle or conveyance with explosives or blasting agents provided the detonators are—

(1) Maintained in the original packaging as shipped from the manufacturer; and

(2) Separated from the explosives or blasting agents by 4 inches of hardwood, laminated partition, or equivalent. The hardwood, laminated partition, or the equivalent shall be fastened to the vehicle or conveyance.

(b) Detonators in quantities of 1000 or fewer may be transported with explosives or blasting agents provided the detonators are—

(1) Kept in closed containers; and

(2) Separated from the explosives or blasting agents by 4 inches of hardwood, laminated partition, or equivalent. The hardwood, laminated partition, or equivalent shall be fastened to the vehicle or conveyance.

§ 56.6202 Vehicles.

(a) Vehicles containing explosive material shall be—

(1) Maintained in good condition and shall comply with the requirements of subpart M of this part;

(2) Equipped with sides and enclosures higher than the explosive material being transported or have the explosive material secured to a nonconductive pallet;

(3) Equipped with a cargo space that shall contain the explosive material (passenger areas shall not be considered cargo space);

(4) Equipped with at least two multipurpose dry-chemical fire extinguishers or one such extinguisher and an automatic fire suppression system;

(5) Posted with warning signs that indicate the contents and are visible from each approach;

(6) Occupied only by persons necessary for handling the explosive material;

(7) Attended or the cargo compartment locked, except when parked at the blast site and loading is in progress; and

(8) Secured while parked by having—

(i) The brakes set;

(ii) The wheels chocked if movement could occur; and

(iii) The engine shut off unless powering a device being used in the loading operation.

(b) Vehicles containing explosives shall have—

(1) No sparking material exposed in the cargo space; and

(2) Only properly secured nonsparking equipment in the cargo space with the explosives.

(c) Vehicles used for dispensing bulk explosive material shall—

(1) Have no zinc or copper exposed in the cargo space; and

(2) Provide any enclosed screw-type conveyors with protection against internal pressure and frictional heat.

§ 56.6203 Locomotives.

Explosive material shall not be transported on a locomotive. When explosive material is hauled by trolley locomotive, covered, electrically insulated cars shall be used.

§ 56.6204 Hoists.

(a) Before explosive material is transported in hoist conveyances, the hoist operator shall be notified.

(b) Explosive material transported in hoist conveyances shall be placed within a container which prevents shifting of the cargo that could cause detonation of the container by impact or by sparks. The manufacturer's container may be used if secured to a nonconductive pallet. When explosives are transported, they shall be secured so as not to contact any sparking material.

(c) No explosive material shall be transported during a mantrip.

§ 56.6205 Conveying explosives by hand.

Closed, nonconductive containers shall be used to carry explosives and detonators to and from blast sites. Separate containers shall be used for explosives and detonators.

Use

§ 56.6300 Control of blasting operations.

(a) Only persons trained and experienced in the handling and use of explosive material shall direct blasting operations and related activities.

(b) Trainees and inexperienced persons shall work only in the immediate presence of persons trained and experienced in the handling and use of explosive material.

§ 56.6301 Blasthole obstruction check.

Before loading, blastholes shall be checked and, wherever possible, cleared of obstructions.

§ 56.6302 Explosive material protection.

(a) Explosives and blasting agents shall be kept separated from detonators until loading begins.

(b) Explosive material shall be protected from impact and temperatures in excess of 150 °F when taken to the blast site.

§ 56.6303 Initiation preparation.

(a) Primers shall be made up only at the time of use and as close to the blast site as conditions allow.

(b) Primers shall be prepared with the detonator contained securely and completely within the explosive or contained securely and appropriately for its design in the tunnel or cap well.

(c) When using detonating cord to initiate another explosive, a connection shall be prepared with the detonating cord threaded through, attached securely to, or otherwise in contact with the explosive.

§ 56.6304 Primer protection.

(a) Tamping shall not be done directly on a primer.

(b) Rigid cartridges of explosives or blasting agents that are 4 inches (100 millimeters) in diameter or larger shall not be dropped on the primer except where the blasthole contains sufficient depth of water to protect the primer from impact. Slit packages of prill, water gel, or emulsions are not considered rigid cartridges and may be drop loaded.

§ 56.6305 Unused explosive material.

Unused explosive material shall be moved to a protected location as soon as practical after loading operations are completed.

§ 56.6306 Loading and blasting.

(a) Vehicles and equipment shall not be driven over explosive material or initiating systems in a manner which could contact the material or system, or create other hazards.

(b) Once loading begins, the only activities permitted within the blast site shall be those activities directly related to the blasting operation and the activities of surveying, stemming, sampling of geology, and reopening of holes provided that reasonable care is exercised. Haulage activity is permitted near the base of the highwall being loaded provided no other haulage access exists.

(c) Loading shall be continuous except where adverse circumstances such as unfavorable atmospheric conditions, large equipment failure, or circumstances beyond the operator's control necessitate an interruption in loading.

(d) In electric blasting prior to connecting to the power source and in nonelectric blasting prior to attaching an initiating device, all persons shall leave the blast area except persons in a blasting shelter or other location that protects them from concussion (shock wave), flying material, and gases.

(e) When loading is completed and circuits are connected, the blasts shall be fired without undue delay unless adverse circumstances such as unfavorable atmospheric conditions, large equipment failure, or circumstances beyond the operator's control necessitate delay. If the time between the connection of circuits and the firing of the blast will exceed 72 hours, the operator shall notify the appropriate MSHA District Office before the 72 hours has elapsed.

(f) Before firing a blast—

(1) Ample warning shall be given to allow all persons to be evacuated;

(2) Clear exit routes shall be provided for persons firing the round; and

(3) All access routes to the blast area shall be guarded or barricaded to prevent the passage of persons or vehicles.

(g) No work shall resume in the blast area until a post-blast examination addressing potential blast-related hazards has been conducted by a person with the ability and experience to perform the examination.

§ 56.6307 Drill stem loading.

Explosive material shall not be loaded into blastholes with drill stem equipment or other devices that could be extracted while containing explosive material. The use of loading hose, collar sleeves, or collar pipes is permitted.

§ 56.6308 Initiation systems.

Initiation systems shall be used in accordance with the manufacturer's instructions.

§ 56.6309 Fuel oil requirements for ANFO.

(a) Liquid hydrocarbon fuels with flash points lower than that of No. 2 diesel oil (125° F) shall not be used to prepare ammonium nitrate-fuel oil, except that diesel fuels with flash points no lower than 100° F may be used at ambient air temperatures below 45° F.

(b) Waste oil, including crankcase oil, shall not be used to prepare ammonium nitrate-fuel oil.

§ 56.6310 Misfire waiting period.

When a misfire is suspected, persons shall not enter the blast area—

(a) For 30 minutes if safety fuse and blasting caps are used; or

(b) For 15 minutes if any other type detonators are used.

§ 56.6311 Handling of misfires.

(a) Faces and muck piles shall be examined for misfires after each blasting operation.

(b) Only work necessary to remove a misfire and protect the safety of miners engaged in the removal shall be permitted in the affected area until the misfire is disposed of in a safe manner.

(c) When a misfire cannot be disposed of safely, each approach to the area affected by the misfire shall be posted with a warning sign at a conspicuous location to prohibit entry, and the condition shall be reported immediately to mine management.

(d) Misfires occurring during the shift shall be reported to mine management not later than the end of the shift.

§ 56.6312 Secondary blasting.

Secondary blasts fired at the same time in the same work area shall be initiated from one source.

§ 56.6313 Blast site security.

Areas in which loading is suspended or loaded holes are awaiting firing shall be attended, barricaded and posted, or flagged against unauthorized entry.

Electric Blasting

§ 56.6400 Compatibility of electric detonators.

All electric detonators to be fired in a round shall be from the same manufacturer and shall have similar electrical firing characteristics.

§ 56.6401 Shunting.

Except during testing—

(a) Electric detonators shall be kept shunted until connected to the blasting line or wired into a blasting round;

(b) Wired rounds shall be kept shunted until connected to the blasting line; and

(c) Blasting lines shall be kept shunted until immediately before blasting.

§ 56.6402 Deenergized circuits near detonators.

Electrical distribution circuits within 50 feet of electric detonators at the blast site shall be deenergized. Such circuits need not be deenergized between 25 to 50 feet of the electric detonators if stray current tests, conducted as frequently as necessary, indicate a maximum stray current of less than 0.05 amperes through a 1-ohm resistor as measured at the blast site.

§ 56.6403 Branch circuits.

(a) If electric blasting includes the use of branch circuits, each branch shall be equipped with a safety switch or equivalent method to isolate the circuits to be used.

(b) At least one safety switch or equivalent method of protection shall be located outside the blast area and shall be in the open position until persons are withdrawn.

§ 56.6404 Separation of blasting circuits from power source.

(a) Switches used to connect the power source to a blasting circuit shall be locked in the open position except when closed to fire the blast.

(b) Lead wires shall not be connected to the blasting switch until the shot is ready to be fired.

§ 56.6405 Firing devices.

(a) Power sources shall be capable of delivering sufficient current to energize all electric detonators to be fired with the type of circuits used. Storage or dry cell batteries are not permitted as power sources.

(b) Blasting machines shall be tested, repaired, and maintained in accordance with manufacturer's instructions.

(c) Only the blaster shall have the key or other control to an electrical firing device.

§ 56.6406 Duration of current flow.

If any part of a blast is connected in parallel and is to be initiated from powerlines or lighting circuits, the time of current flow shall be limited to a maximum of 25 milliseconds. This can be accomplished by incorporating an arcing control device in the blasting circuit or by interrupting the circuit with an explosive device attached to one or both lead lines and initiated by a 25-millisecond delay electric detonator.

§ 56.6407 Circuit testing.

A blasting galvanometer or other instrument designed for testing blasting circuits shall be used to test the following:

(a) Continuity of each electric detonator in the blasthole prior to stemming and connection to the blasting line.

(b) Resistance of individual series or the resistance of multiple balanced series to be connected in parallel prior to their connection to the blasting line.

(c) Continuity of blasting lines prior to the connection of electric detonator series.

(d) Total blasting circuit resistance prior to connection to the power source.

VOL 58 ISS 249 DEC 30 1993 UMI

Nonelectric Blasting

§ 56.6500 Damaged initiating material.

A visual check of the completed circuit shall be made to ensure that the components are properly aligned and connected. Safety fuse, igniter cord, detonating cord, shock or gas tubing, and similar material which is kinked, bent sharply, or damaged shall not be used.

§ 56.6501 Nonelectric initiation systems.

(a) When the nonelectric initiation system uses shock tube—

(1) Connections with other initiation devices shall be secured in a manner which provides for uninterrupted propagation;

(2) Factory-made units shall be used as assembled and shall not be cut except that a single splice is permitted on the lead-in trunkline during dry conditions; and

(3) Connections between blastholes shall not be made until immediately prior to clearing the blast site when surface delay detonators are used.

(b) When the nonelectric initiation system uses detonating cord—

(1) The line of detonating cord extending out of a blasthole shall be cut from the supply spool immediately after the attached explosive is correctly positioned in the hole;

(2) In multiple row blasts, the trunkline layout shall be designed so that the detonation can reach each blasthole from at least two directions;

(3) Connections shall be tight and kept at right angles to the trunkline;

(4) Detonators shall be attached securely to the side of the detonating cord and pointed in the direction in which detonation is to proceed;

(5) Connections between blastholes shall not be made until immediately prior to clearing the blast site when surface delay detonators are used; and

(6) Lead-in lines shall be manually unreeled if connected to the trunklines at the blast site.

(c) When the nonelectric initiation system uses gas tube, continuity of the circuit shall be tested prior to blasting.

§ 56.6502 Safety fuse.

(a) The burning rate of each spool of safety fuse to be used shall be measured, posted in locations which will be conspicuous to safety fuse users, and brought to the attention of all persons involved with the blasting operation.

(b) When firing with safety fuse ignited individually using handheld lighters, the safety fuse shall be of lengths which provide at least the minimum burning time for a particular size round, as specified in the following table.

TABLE E–1—SAFETY FUSE—MINIMUM BURNING TIME

Number of holes in a round	Minimum burning time
1	2 minutes.[1]
2–5	2 minutes 40 seconds.
6–10	3 minutes 20 seconds.
11–15	5 minutes.

[1] For example, at least a 36-inch length of 40-second-per-foot safety fuse or at least a 48-inch length of 30-second-per-foot safety fuse would have to be used to allow sufficient time to evacuate the area.

(c) Where flyrock might damage exposed safety fuse, the blast shall be timed so that all safety fuses are burning within the blastholes before any blasthole detonates.

(d) Fuse shall be cut and capped in dry locations.

(e) Blasting caps shall be crimped to fuse only with implements designed for that purpose.

(f) Safety fuse shall be ignited only after the primer and the explosive material are securely in place.

(g) Safety fuse shall be ignited only with devices designed for that purpose. Carbide lights, liquefied petroleum gas torches, and cigarette lighters shall not be used to light safety fuse.

(h) At least two persons shall be present when lighting safety fuse, and no one shall light more than 15 individual fuses. If more than 15 holes per person are to be fired, electric initiation systems, igniter cord and connectors, or other nonelectric initiation systems shall be used.

Extraneous Electricity

§ 56.6600 Loading practices.

If extraneous electricity is suspected in an area where electric detonators are used, loading shall be suspended until tests determine that stray current does not exceed 0.05 amperes through a 1-ohm resister when measured at the location of the electric detonators. If greater levels of extraneous electricity are found, the source shall be determined and no loading shall take place until the condition is corrected.

§ 56.6601 Grounding.

Electric blasting circuits, including powerline sources when used, shall not be grounded.

§ 56.6602 Static electricity dissipation during loading.

When explosive material is loaded pneumatically or dropped into a blasthole in a manner that could generate static electricity—

(a) An evaluation of the potential static electricity hazard shall be made and any hazard shall be eliminated before loading begins;

(b) The loading hose shall be of a semiconductive type, have a total of not more than 2 megohms of resistance over its entire length and not less than 1000 ohms of resistance per foot;

(c) Wire-countered hoses shall not be used;

(d) Conductive parts of the loading equipment shall be bonded and grounded and grounds shall not be made to other potential sources of extraneous electricity; and

(e) Plastic tubes shall not be used as hole liners if the hole contains an electric detonator.

§ 56.6603 Air gap.

At least a 15-foot air gap shall be provided between the blasting circuit and the electric power source.

§ 56.6604 Precautions during storms.

During the approach and progress of an electrical storm, blasting operations shall be suspended and persons withdrawn from the blast area or to a safe location.

§ 56.6605 Isolation of blasting circuits.

Lead wires and blasting lines shall be isolated and insulated from power conductors, pipelines, and railroad tracks, and shall be protected from sources of stray or static electricity. Blasting circuits shall be protected from any contact between firing lines and overhead powerlines which could result from the force of a blast.

Equipment/Tools

§ 56.6700 Nonsparking tools.

Only nonsparking tools shall be used to open containers of explosive material or to punch holes in explosive cartridges.

§ 56.6701 Tamping and loading pole requirements.

Tamping and loading poles shall be of wood or other nonconductive, nonsparking material. Couplings for poles shall be nonsparking.

Maintenance

§ 56.6800 Storage facilities.

When repair work which could produce a spark or flame is to be performed on a storage facility—

(a) The explosive material shall be moved to another facility, or moved at least 50 feet from the repair activity and monitored; and

(b) The facility shall be cleaned to prevent accidental detonation.

§ 56.6801 Vehicle repair.

Vehicles containing explosive material and oxidizers shall not be taken into a repair garage or shop.

§ 56.6802 Bulk delivery vehicles.

No welding or cutting shall be performed on a bulk delivery vehicle until the vehicle has been washed down and all explosive material has been removed. Before welding or cutting on a hollow shaft, the shaft shall be thoroughly cleaned inside and out and vented with a minimum ½-inch diameter opening to allow for sufficient ventilation.

§ 56.6803 Blasting lines.

Permanent blasting lines shall be properly supported. All blasting lines shall be insulated and kept in good repair.

General Requirements

§ 56.6900 Damaged or deteriorated explosive material.

Damaged or deteriorated explosive material shall be disposed of in a safe manner in accordance with the instructions of the manufacturer.

§ 56.6901 Black powder.

(a) Black powder shall be used for blasting only when a desired result cannot be obtained with another type of explosive, such as in quarrying certain types of dimension stone.

(b) Containers of black powder shall be—

(1) Nonsparking;

(2) Kept in a totally enclosed cargo space while being transported by a vehicle;

(3) Securely closed at all times when—

(i) Within 50 feet of any magazine or open flame,

(ii) Within any building in which a fuel-fired or exposed-element electric heater is operating, or

(iii) In an area where electrical or incandescent-particle sparks could result in powder ignition; and

(4) Open only when the powder is being transferred to a blasthole or another container and only in locations not listed in paragraph (b)(3) of this section.

(c) Black powder shall be transferred from containers only by pouring.

(d) Spills shall be cleaned up promptly with nonsparking equipment. Contaminated powder shall be put into a container of water and shall be disposed of promptly after the granules have disintegrated, or the spill area shall be flushed promptly with water until the granules have disintegrated completely.

(e) Misfires shall be disposed of by washing the stemming and powder charge from the blasthole, and removing and disposing of the initiator in accordance with the requirement for damaged explosives.

(f) Holes shall not be reloaded for at least 12 hours when the blastholes have failed to break as planned.

§ 56.6902 Excessive temperatures.

(a) Where heat could cause premature detonation, explosive material shall not be loaded into hot areas, such as kilns or sprung holes.

(b) When blasting sulfide ores where hot holes occur that may react with explosive material in blastholes, operators shall—

(1) Measure an appropriate number of blasthole temperatures in order to assess the specific mine conditions prior to the introduction of explosive material;

(2) Limit the time between the completion of loading and the initiation of the blast to no more than 12 hours; and

(3) Take other special precautions to address the specific conditions at the mine to prevent premature detonation.

§ 56.6903 Buring explosive material.

If explosive material is suspected of burning at the blast site, persons shall be evacuated from the endangered area and shall not return for at least one hour after the burning or suspected burning has stopped.

§ 56.6904 Smoking and open flames.

Smoking and use of open flames shall not be permitted within 50 feet of explosive material except when separated by permanent noncombustible barriers. This standard does not apply to devices designed to ignite safety fuse or to heating devices which do not create a fire or explosion hazard.

PART 57—[AMENDED]

1. The authority citation for part 57 is revised to read as follows:

Authority: 30 U.S.C. 811, 956, 961.

2. The expiration date published in the **Federal Register** of June 7, 1993 (58 FR 31908), for §§ 57.6140, 57.6220, 57.6320, 57.6330, 57.6331, 57.6375, and 57.6382 is extended to January 31, 1994.

3. The delay of effectiveness published in the **Federal Register** of June 7, 1993 (58 FR 31908), for the definition of "blast site" in § 57.6000, the first sentence in § 57.6130(b), and §§ 57.6131(a)(1), 57.6202(a)(1), 57.6304(b), 57.6306, 57.6501(a), 57.6902(b), 57.6903 and appendix I to subpart E, is delayed until January 31, 1994.

4. Effective January 31, 1994, subpart E of part 57 is revised to read as follows

Subpart E—Explosives

Sec.
57.6000 Definitions.

Storage—Surface and Underground

57.6100 Separation of stored explosive material.
57.6101 Area around explosive material storage facilities.
57.6102 Explosive material storage practices.

Storage—Surface Only

57.6130 Explosive material storage facilities.
57.6131 Location of explosive material storage facilities.
57.6132 Magazine requirements.
57.6133 Powder chests.

Storage—Underground Only

57.6160 Main facilities.
57.6161 Auxiliary facilities.

Transportation—Surface and Underground

57.6200 Delivery to storage or blast site areas.
57.6201 Separation of transported explosive material.
57.6202 Vehicles.
57.6203 Locomotives.
57.6204 Hoists.
57.6205 Conveying explosives by hand.

Use—Surface and Underground

57.6300 Control of blasting operations.
57.6301 Blasthole obstruction check.
57.6302 Explosive material protection.
57.6303 Initiation preparation.
57.6304 Primer protection.
57.6305 Unused explosive material.
57.6306 Loading and blasting.
57.6307 Drill stem loading.
57.6308 Initiation systems.
57.6309 Fuel oil requirements for ANFO.
57.6310 Misfire waiting period.
57.6311 Handling of misfires.
57.6312 Secondary blasting.
57.6313 Blast site security.

Electric Blasting—Surface and Underground

57.6400 Compatibility of electric detonators.
57.6401 Shunting.

General Requirements—Surface and Underground

57.6900 Damaged or deteriorated explosive material.
57.6901 Black powder.
57.6902 Excessive temperatures.
57.6903 Burning explosive material.
57.6904 Smoking and open flames.

General Requirements—Underground Only

57.6960 Mixing of explosive material.

Subpart E—Explosives

§57.6000 Definitions.

The following definitions apply in this subpart.

Attended. Presence of an individual or continuous monitoring to prevent unauthorized entry or access. In addition, areas containing explosive material at underground areas of a mine can be considered attended when all access to the underground areas of the mine is secured from unauthorized entry. Vertical shafts shall be considered secure. Inclined shafts or adits shall be considered secure when locked at the surface.

Barrier. A "material object, or objects that separates, keeps apart, or demarcates in a conspicuous manner such as cones, a warning sign, or tape."

Blast area. The area in which concussion (shock wave), flying material, or gases from an explosion may cause injury to persons. In determining the blast area, the following factors shall be considered:

(1) Geology or material to be blasted.
(2) Blast pattern.
(3) Burden, depth, diameter, and angle of the holes.
(4) Blasting experience of the mine.
(5) Delay system, powder factor, and pounds per delay.
(6) Type and amount of explosive material.
(7) Type and amount of stemming.

Blast site. The area where explosive material is handled during loading, including the perimeter formed by the loaded blastholes and 50 feet (15.2 meters) in all directions from loaded holes. A minimum distance of 30 feet (9.1 meters) may replace the 50-foot (15.2-meter) requirement if the perimeter of loaded holes is demarcated with a barrier. The 50-foot (15.2-meter) and alternative 30-foot (9.1-meter) requirements also apply in all directions along the full depth of the hole. In underground mines, at least 15 feet (4.6 meters) of solid rib, pillar, or broken rock can be substituted for the 50-foot (15.2-meter) distance. In underground mines utilizing a block-caving system or similar system, at least 6 feet (1.8 meters) of solid rib or pillar, including concrete reinforcement of at least 10 inches (254 millimeters), with overall dimensions of not less than 6 feet (1.8 meters), may be substituted for the 50-foot (15.2-meter) distance requirement.

Blasting agent. Any substance classified as a blasting agent by the Department of Transportation in 49 CFR 173.114a(a). This document is available at any MSHA Metal and Nonmetal Safety and Health district office.

Detonating cord. A flexible cord containing a center core of high explosives which may be used to initiate other explosives.

Detonator. Any device containing a detonating charge used to initiate an explosive. These devices include electric or nonelectric instantaneous or delay blasting caps, and delay connectors. The term "detonator" does not include detonating cord. Detonators may be either "Class A" detonators or "Class C" detonators, as classified by the Department of Transportation in 49 FR 173.53, and 173.100. This document is available at any MSHA Metal and Nonmetal Safety and Health district office.

Emulsion. An explosive material containing substantial amounts of oxidizers dissolved in water droplets, surrounded by an immiscible fuel.

Explosive. Any substance classified as an explosive by the Department of Transportation in 49 CFR 173.53, 173.88, and 173.100. This document is available at any MSHA Metal and Nonmetal Safety and Health district office.

Explosive material. Explosives, blasting agents, and detonators.

Flash point. The minimum temperature at which sufficient vapor is released by a liquid to form a flammable vapor-air mixture near the surface of the liquid.

Igniter cord. A fuse that burns progressively along its length with an external flame at the zone of burning, used for lighting a series of safety fuses in a desired sequence.

Laminated partition. A partition composed of the following material and minimum nominal dimensions: ½-inch-thick plywood, ½-inch-thick gypsum wallboard, ⅛-inch-thick low carbon steel, and ¼-inch-thick plywood, bonded together in that order. Other combinations of materials may be used, such as plywood, wood or gypsum wallboard as insulators, and steel or wood as structural elements, provided that the partition is equivalent to a laminated partition for both insulation and structural purposes as determined by appropriate testing. The Institute of Makers of Explosives (IME) 22 container or compartment, described in IME Safety Library Publication 22 (Jan. 1985), meets the criteria of a laminated partition. This document is available at any MSHA Metal and Nonmetal Safety and Health district office.

Loading. Placing explosive material either in a blasthole or against the material to be blasted.

Magazine. A bullet-resistant, theft-resistant, fire-resistant, weather-resistant, ventilated facility for the storage of explosives and detonators (BATF Type 1 or Type 2 facility).

Misfire. The complete or partial failure of explosive material to detonate as planned. The term also is used to describe the explosive material itself that has failed to detonate.

Multipurpose dry-chemical fire extinguisher. An extinguisher having a rating of at least 2–A:10–B:C and containing a nominal 4.5 pounds or more of dry-chemical agent.

Primer. A unit, package, or cartridge or explosives which contains a detonator and is used to initiate other explosives or blasting agents.

Safety switch. A switch that provides shunt protection in blasting circuits between the blast site and the switch used to connect a power source to the blasting circuit.

Slurry. An explosive material containing substantial portions of a liquid, oxidizers, and fuel, plus a thickener.

Storage facility. The entire class of structures used to store explosive materials. A "storage facility" used to store blasting agents corresponds to a BATF Type 4 or 5 storage facility.

Water gel. An explosive material containing substantial portions of water, oxidizers, and fuel, plus a cross-linking agent.

Storage—Surface and Underground

§57.6100 Separation of stored explosive material.

(a) Detonators shall not be stored in the same magazine with other explosive material.

(b) When stored in the same magazine blasting agents shall be separated from explosives, safety fuse, and detonating cord to prevent contamination.

§57.6101 Areas around explosive material storage facilities.

(a) Areas surrounding storage facilities for explosive material shall be clear of rubbish, brush, dry grass, and trees for 25 feet in all directions, except that live trees 10 feet or taller need not be removed.

(b) Other combustibles shall not be stored or allowed to accumulate within 50 feet of explosive material. Combustible liquids shall be stored in a manner that ensures drainage will occur away from the explosive material storage facility in case of tank rupture.

§57.6102 Explosive material storage practices.

(a) Explosive material shall be—

(1) Stored in a manner to facilitate use of oldest stocks first;

(2) Stored according to brand and grade in such a manner as to facilitate identification; and

(3) Stacked in a stable manner but not more than 8 feet high.

(b) Explosives and detonators shall be stored in closed nonconductive containers except that nonelectric detonating devices may be stored on nonconductive racks provided the case-insert instructions and the date-plant-shift code are maintained with the product.

Storage—Surface Only

§57.6130 Explosive material storage facilities.

(a) Detonators and explosives shall be stored in magazines.

(b) Packaged blasting agents shall be stored in a magazine or other facility which is ventilated to prevent dampness and excessive heating, weather-resistant, and locked or attended. Drop trailers that are currently licensed by the Federal, State, or local authorities for over-the-road use do not have to be ventilated. Facilities other than magazines used to store blasting agents shall contain only blasting agents.

(c) Bulk blasting agents shall be stored in weather-resistant bins or tanks which are locked, attended, or otherwise inaccessible to unauthorized entry.

(d) Facilities, bins or tanks shall be posted with the appropriate United States Department of Transportation placards or other appropriate warning signs that indicate the contents and are visible from each approach.

§57.6131 Location of explosive material storage facilities.

(a) Storage facilities for any explosive material shall be—

(1) Located so that the forces generated by a storage facility explosion will not create a hazard to occupants in mine buildings and will not damage dams or electric substations; and

(2) Detached structures located outside the blast area and a sufficient distance from powerlines so that the powerlines, if damaged, would not contact the magazines.

(b) Operators should also be aware of regulations affecting storage facilities in 27 CFR part 55, in particular, §§ 55.218 and 55.220. This document is available at any MSHA Metal and Nonmetal Safety and Health district office.

§57.6132 Magazine requirements.

(a) Magazines shall be—

(1) Structurally sound;

(2) Noncombustible or the exterior covered with fire-resistant material;

(3) Bullet resistant;

(4) Made of nonsparking material on the inside;

(5) Ventilated to control dampness and excessive heating within the magazine;

(6) Posted with the appropriate United States Department of Transportation placards or other appropriate warning signs that indicate the contents and are visible from each approach, so located that a bullet passing through any of the signs will not strike the magazine;

(7) Kept clean and dry inside;

(8) Unlighted or lighted by devices that are specifically designed for use in magazines and which do not create a fire or explosion hazard;

(9) Unheated or heated only with devices that do not create a fire or explosion hazard;

(10) Locked when unattended; and

(11) Used exclusively for the storage of explosive material except for essential nonsparking equipment used for the operation of the magazine.

(b) Metal magazines shall be equipped with electrical bonding connections between all conductive portions so the entire structure is at the same electrical potential. Suitable electrical bonding methods include welding, riveting, or the use of securely tightened bolts where individual metal portions are joined. Conductive portions of nonmetal magazines shall be grounded.

(c) Electrical switches and outlets shall be located on the outside of the magazine.

§57.6133 Powder chests.

(a) Powder chests (day boxes) shall be—

(1) Structurally sound, weather-resistant, equipped with a lid or cover, and with only nonsparking material on the inside;

(2) Posted with the appropriate United States Department of Transportation placards or other appropriate warning signs that indicate the contents and are visible from each approach;

(3) Located out of the blast area once loading has been completed;

(4) Locked or attended when containing explosive material; and

(5) Emptied at the end of each shift with the contents returned to a magazine or other storage facility, or attended.

(b) Detonators shall be kept in separate chests from explosives or blasting agents, except if separated by 4-inches of hardwood, laminated partition, or equivalent.

Storage—Underground Only

§57.6160 Main facilities.

(a) Main facilities used to store explosive material underground shall be located—

(1) In stable or supported ground;

(2) So that a fire or explosion in the storage facilities will not prevent escape from the mine, or cause detonation of the contents of another storage facility;

(3) Out of the line of blasts, and protected from vehicular traffic, except that accessing the facility;

(4) At least 200 feet from work places or shafts;

(5) At least 50 feet from electric substations;

(6) A safe distance from trolley wires; and

(7) At least 25 feet from detonator storage facilities.

(b) Main facilities used to store explosive material underground shall be—

(1) Posted with warning signs that indicate the contents and are visible from any approach;

(2) Used exclusively for the storage of explosive material and necessary equipment associated with explosive material storage and delivery;

(i) Portions of the facility used for the storage of explosives shall only contain nonsparking material or equipment.

(ii) The blasting agent portion of the facility may be used for the storage of other necessary equipment.

(3) Kept clean, suitably dry, and orderly;

(4) Provided with unobstructed ventilation openings;

(5) Kept securely locked unless all access to the mine is either locked or attended; and

(6) Unlighted or lighted only with devices that do not create a fire or explosion hazard and which are specifically designed for use in magazines.

VOL 58 ISS 249 DE 30 1993 UMI

(c) Electrical switches and outlets shall be located outside the facility.

§ 57.6161 Auxiliary facilities.

(a) Auxiliary facilities used to store explosive material near work places shall be wooden, box-type containers equipped with covers or doors, or facilities constructed or mined-out to provide equivalent impact resistance and confinement.

(b) The auxiliary facilities shall be—

(1) Constructed of nonsparking material on the inside when used for the storage of explosives;

(2) Kept clean, suitably dry, and orderly;

(3) Kept in repair;

(4) Located out of the line of blasts so they will not be subjected to damaging shock or flyrock;

(5) Identified with warning signs or coded to indicate the contents with markings visible from any approach;

(6) Located at least 15 feet from all haulageways and electrical equipment, or placed entirely within a mined-out recess in the rib used exclusively for explosive material;

(7) Filled with no more than a one-week supply of explosive material;

(8) Separated by at least 25 feet from other facilities used to store detonators; and

(9) Kept securely locked unless all access to the mine is either locked or attended.

Transportation—Surface and Underground

§ 57.6200 Delivery to storage or blast site areas.

Explosive material shall be transported without undue delay to the storage area or blast site.

§ 57.6201 Separation of transported explosive material.

Detonators shall not be transported on the same vehicle or conveyance with other explosives except as follows:

(a) Detonators in quantities of more than 1000 may be transported in a vehicle or conveyance with explosives or blasting agents provided the detonators are—

(1) Maintained in the original packaging as shipped from the manufacturer; and

(2) Separated from the explosives or blasting agents by 4 inches of hardwood, laminated partition, or equivalent. The hardwood, laminated partition, or equivalent shall be fastened to the vehicle or conveyance.

(b) Detonators in quantities of 1000 or fewer may be transported with explosives or blasting agents provided the detonators are—

(1) Kept in closed containers; and

(2) Separated from the explosives or blasting agents by 4-inches of hardwood, laminated partition, or equivalent. The hardwood, laminated partition, or the equivalent shall be fastened to the vehicle or conveyance.

§ 57.6202 Vehicles.

(a) Vehicles containing explosive material shall be—

(1) Maintained in good condition and shall comply with the requirements of subpart M of this part;

(2) Equipped with sides and enclosures higher than the explosive material being transported or have the explosive material secured to a nonconductive pallet;

(3) Equipped with a cargo space that shall contain the explosive material (passenger areas shall not be considered cargo space);

(4) Equipped with at least two multipurpose dry-chemical fire extinguishers or one such extinguisher and an automatic fire suppression system;

(5) Posted with warning signs that indicate the contents and are visible from each approach;

(6) Occupied only by persons necessary for handling the explosive material;

(7) Attended or the cargo compartment locked at surface areas of underground mines, except when parked at the blast site and loading is in progress; and

(8) Secured while parked by having—

(i) The brakes set;

(ii) The wheels chocked if movement could occur; and

(iii) The engine shut off unless powering a device being used in the loading operation.

(b) Vehicles containing explosives shall have—

(1) No sparking material exposed in the cargo space; and

(2) Only properly secured nonsparking equipment in the cargo space with the explosives.

(c) Vehicles used for dispensing bulk explosive material shall—

(1) Have no zinc or copper exposed in the cargo space; and

(2) Provide any enclosed screw-type conveyors with protection against internal pressure and frictional heat.

§ 57.6203 Locomotives.

Explosive material shall not be transported on a locomotive. When explosive material is hauled by trolley locomotive, covered, electrically insulated cars shall be used.

§ 57.6204 Hoists.

(a) Before explosive material is transported in hoist conveyances—

(1) The hoist operator shall be notified; and

(2) Hoisting in adjacent shaft compartments, except for empty conveyances or counterweights, shall be stopped until transportation of the explosive material is completed.

(b) Explosive material transported in hoist conveyances shall be placed within a container which prevents shifting of the cargo that could cause detonation of the container by impact or by sparks. The manufacturer's container may be used if secured to a nonconductive pallet. When explosives are transported, they shall be secured so as not to contact any sparking material.

(c) No explosive material shall be transported during a mantrip.

§ 57.6205 Conveying explosives by hand.

Closed, nonconductive containers shall be used to carry explosives and detonators to and from blast sites. Separate containers shall be used for explosives and detonators.

Use—Surface and Underground

§ 57.6300 Control of blasting operations.

(a) Only persons trained and experienced in the handling and use of explosive material shall direct blasting operations and related activities.

(b) Trainees and inexperienced persons shall work only in the immediate presence of persons trained and experienced in the handling and use of explosive material.

§ 57.6301 Blasthole obstruction check.

Before loading, blastholes shall be checked and, wherever possible, cleared of obstructions.

§ 57.6302 Explosive material protection.

(a) Explosives and blasting agents shall be kept separated from detonators until loading begins.

(b) Explosive material shall be protected from impact and temperatures in excess of 150° F when taken to the blast site.

§ 57.6303 Initiation preparation.

(a) Primers shall be made up only at the time of use and as close to the blast site as conditions allow.

(b) Primers shall be prepared with the detonator contained securely and completely within the explosive or contained securely and appropriately for its design in the tunnel or cap well.

(c) When using detonating cord to initiate another explosive, a connection shall be prepared with the detonating cord threaded through, attached

securely to, or otherwise in contact with the explosive.

§ 57.6304 Primer protection.

(a) Tamping shall not be done directly on a primer.

(b) Rigid cartridges of explosives or blasting agents that are 4 inches (100 millimeters) in diameter or larger shall not be dropped on the primer except where the blasthole contains sufficient depth of water to protect the primer from impact. Slit packages of prill, water gel, or emulsions are not considered rigid cartridges and may be drop loaded.

§ 57.6305 Unused explosive material.

Unused explosive material shall be moved to a protected location as soon as practical after loading operations are completed.

§ 57.6306 Loading and blasting.

(a) Vehicles and equipment shall not be driven over explosive material or initiating systems in a manner which could contact the material or system, or create other hazards.

(b) Once loading begins, the only activities permitted within the blast site shall be those activities directly related to the blasting operation and the activities of surveying, stemming, sampling of geology, and reopening of holes provided that reasonable care is exercised. Haulage activity is permitted near the base of the highwall being loaded provided no other haulage access exists.

(c) Loading shall be continuous except where adverse circumstances such as unfavorable atmospheric conditions, large equipment failure, or circumstances beyond the operator's control necessitate an interruption in loading.

(d) In electric blasting prior to connecting to the power source and in nonelectric blasting prior to attaching an initiating device, all persons shall leave the blast area except persons in a blasting shelter or other location that protects them from concussion (shock wave), flying material, and gases.

(e) When loading is completed and circuits are connected, the blasts shall be fired without undue delay unless adverse circumstances such as unfavorable atmospheric conditions, large equipment failure, or circumstances beyond the operator's control necessitate delay. If the time between the connection of circuits and the firing of the blast will exceed 72 hours, the operator shall notify the appropriate MSHA District Office before the 72 hours has elapsed.

(f) Before firing a blast—

(1) Ample warning shall be given to allow all persons to be evacuated;

(2) Clear exit routes shall be provided for persons firing the round; and

(3) All access routes to the blast area shall be guarded or barricaded to prevent the passage of persons or vehicles.

(g) No work shall resume in the blast area until a post-blast examination addressing potential blast-related hazards has been conducted by a person with the ability and experience to perform the examination.

§ 57.6307 Drill stem loading.

Explosive material shall not be loaded into blastholes with drill stem equipment or other devices that could be extracted while containing explosive material. The use of loading hose, collar sleeves, or collar pipes is permitted.

§ 57.6308 Initiation systems.

Initiation systems shall be used in accordance with the manufacturer's instructions.

§ 57.6309 Fuel oil requirement for ANFO.

(a) Liquid hydrocarbon fuels with flash points lower than that of No. 2 diesel oil (125° F) shall not be used to prepare ammonium nitrate-fuel oil, except that diesel fuels with flash points no lower than 100° F may be used at ambient air temperatures below 45° F.

(b) Waste oil, including crankcase oil, shall not be used to prepare ammonium nitrate-fuel oil.

§ 57.6310 Misfire waiting period.

When a misfire is suspected, persons shall not enter the blast area—

(a) For 30 minutes if safety fuse and blasting caps are used; or

(b) For 15 minutes if any other type detonators are used.

§ 57.6311 Handling of misfires.

(a) Faces and muck piles shall be examined for misfires after each blasting operation.

(b) Only work necessary to remove a misfire and protect the safety of miners engaged in the removal shall be permitted in the affected area until the misfire is disposed of in a safe manner.

(c) When a misfire cannot be disposed of safely, each approach to the area affected by the misfire shall be posted with a warning sign at a conspicuous location to prohibit entry, and the condition shall be reported immediately to mine management.

(d) Misfires occurring during the shift shall be reported to mine management not later than the end of the shift.

§ 57.6312 Secondary blasting.

Secondary blasts fired at the same time in the same work area shall be initiated from one source.

§ 57.6313 Blast site security.

Areas in which loading is suspended or loaded holes are awaiting firing shall be attended, barricaded and posted, or flagged against unauthorized entry.

Electric Blasting—Surface and Underground

§ 57.6400 Compatibility of electric detonators.

All electric detonators to be fired in a round shall be from the same manufacturer and shall have similar electrical firing characteristics.

§ 57.6401 Shunting.

Except during testing—

(a) Electric detonators shall be kept shunted until connected to the blasting line or wired into a blasting round;

(b) Wired rounds shall be kept shunted until connected to the blasting line; and

(c) Blasting lines shall be kept shunted until immediately before blasting.

§ 57.6402 Deenergized circuits near detonators.

Electrical distribution circuits within 50 feet of electric detonators at the blast site shall be deenergized. Such circuits need not be deenergized between 25 to 50 feet of the electric detonators if stray current tests, conducted as frequently as necessary, indicate a maximum stray current of less than 0.05 amperes through a 1-ohm resistor as measured at the blast site.

§ 57.6403 Branch circuits.

(a) If electric blasting includes the use of branch circuits, each branch shall be equipped with a safety switch or equivalent method to isolate the circuits to be used.

(b) At least one safety switch or equivalent method of protection shall be located outside the blast area and shall be in the open position until persons are withdrawn.

§ 57.6404 Separation of blasting circuits from power source.

(a) Switches used to connect the power source to a blasting circuit shall be locked in the open position except when closed to fire the blast.

(b) Lead wires shall not be connected to the blasting switch until the shot is ready to be fired.

§ 57.6405 Firing devices.

(a) Power sources shall be capable of delivering sufficient current to energize

all electric detonators to be fired with the type of circuits used. Storage or dry cell batteries are not permitted as power sources.

(b) Blasting machines shall be tested, repaired, and maintained in accordance with manufacturer's instructions.

(c) Only the blaster shall have the key or other control to an electrical firing device.

§ 57.6406 Duration of current flow.

If any part of a blast is connected in parallel and is to be initiated from powerlines or lighting circuits, the time of current flow shall be limited to a maximum of 25 milliseconds. This can be accomplished by incorporating an arcing control device in the blasting circuit or by interrupting the circuit with an explosive device attached to one or both lead lines and initiated by a 25-millisecond delay electric detonator.

§ 57.6407 Circuit testing.

A blasting galvanometer or other instrument designed for testing blasting circuits shall be used to test the following:

(a) In surface operations—

(1) Continuity of each electric detonator in the blasthole prior to stemming and connection to the blasting line;

(2) Resistance of individual series or the resistance of multiple balanced series to be connected in parallel prior to their connection to the blasting line;

(3) Continuity of blasting lines prior to the connection of electric detonator series; and

(4) Total blasting circuit resistance prior to connection to the power source.

(b) In underground operations—

(1) Continuity of each electric detonator series; and

(2) Continuity of blasting lines prior to the connection of electric detonators.

Nonelectric Blasting—Surface and Underground

§ 57.6500 Damaged initiating material.

A visual check of the completed circuit shall be made to ensure that the components are properly aligned and connected. Safety fuse, igniter cord, detonating cord, shock or gas tubing, and similar material which is kinked, bent sharply, or damaged shall not be used.

§ 57.6501 Nonelectric initiation systems.

(a) When the nonelectric initiation system uses shock tube—

(1) Connections with other initiation devices shall be secured in a manner which provides for uninterrupted propagation;

(2) Factory-made units shall be used as assembled and shall not be cut except that a single splice is permitted on the lead-in trunkline during dry conditions; and

(3) Connections between blastholes shall not be made until immediately prior to clearing the blast site when surface delay detonators are used.

(b) When the nonelectric initiation system uses detonating cord—

(1) The line of detonating cord extending out of a blasthole shall be cut from the supply spool immediately after the attached explosive is correctly positioned in the hole;

(2) In multiple row blasts, the trunkline layout shall be designed so that the detonation can reach each blasthole from at least two directions;

(3) Connections shall be tight and kept at right angles to the trunkline;

(4) Detonators shall be attached securely to the side of the detonating cord and pointed in the direction in which detonation is to proceed;

(5) Connections between blastholes shall not be made until immediately prior to clearing the blast site when surface delay detonators are used; and

(6) Lead-in lines shall be manually unreeled if connected to the trunklines at the blast site.

(c) When nonelectric initiation systems use gas tube, continuity of the circuit shall be tested prior to blasting.

§ 57.6502 Safety fuse.

(a) The burning rate of each spool of safety fuse to be used shall be measured, posted in locations which will be conspicuous to safety fuse users, and brought to the attention of all persons involved with the blasting operation.

(b) When firing with safety fuse ignited individually using handheld lighters, the safety fuse shall be of lengths which provide at least the minimum burning time for a particular size round, as specified in the following table.

TABLE E–1—SAFETY FUSE—MINIMUM BURNING TIME

Number of holes in a round	Minimum burning time
1	[1] 2 minutes.
2–5	2 minutes 40 seconds.
6–10	3 minutes 20 seconds.
11–15	5 minutes.

[1] For example, at least a 36-inch length of 40-second-per-foot safety fuse or at least a 48-inch length of 30-second-per-foot safety fuse would have to be used to allow sufficient time to evacuate the area.

(c) Where flyrock might damage exposed safety fuse, the blast shall be timed so that all safety fuses are burning within the blastholes before any blasthole detonates.

(d) Fuse shall be cut and capped in dry locations.

(e) Blasting caps shall be crimped to fuse only with implements designed for that purpose.

(f) Safety fuse shall be ignited only after the primer and the explosive material are securely in place.

(g) Safety fuse shall be ignited only with devices designed for that purpose. Carbide lights, liquefied petroleum gas torches, and cigarette lighters shall not be used to light safety fuse.

(h) At least two persons shall be present when lighting safety fuse, and no one shall light more than 15 individual fuses. If more than 15 holes per person are to be fired, electric initiation systems, igniter cord and connectors, or other nonelectric initiation systems shall be used.

Extraneous Electricity—Surface and Underground

§ 57.6600 Loading practices.

If extraneous electricity is suspected in an area where electric detonators are used, loading shall be suspended until tests determine that stray current does not exceed 0.05 amperes through a 1-ohm resister when measured at the location of the electric detonators. If greater levels of extraneous electricity are found, the source shall be determined and no loading shall take place until the condition is corrected.

§ 57.6601 Grounding.

Electric blasting circuits, including powerline sources when used, shall not be grounded.

§ 57.6602 Static electricity dissipation during loading.

When explosive material is loaded pneumatically or dropped into a blasthole in a manner that could generate static electricity—

(a) An evaluation of the potential static electricity hazard shall be made and any hazard shall be eliminated before loading begins;

(b) The loading hose shall be of a semiconductive type, have a total of not more than 2 megohms of resistance over its entire length and not less than 1000 ohms of resistance per foot;

(c) Wire-countered hoses shall not be used;

(d) Conductive parts of the loading equipment shall be bonded and grounded and grounds shall not be made to other potential sources of extraneous electricity; and

(e) Plastic tubes shall not be used as hole liners if the hole contains an electric detonator.

§ 57.6603 Air gap.

At least a 15-foot air gap shall be provided between the blasting circuit and the electric power source.

§ 57.6604 Precautions during storms.

During the approach and progress of an electrical storm—

(a) Surface blasting operations shall be suspended and persons withdrawn from the blast area or to a safe location.

(b) Underground electrical blasting operations that are capable of being initiated by lightning shall be suspended and all persons withdrawn from the blast area or to a safe location.

§ 57.6605 Isolation of blasting circuits.

Lead wires and blasting lines shall be isolated and insulated from power conductors, pipelines, and railroad tracks, and shall be protected from sources of stray or static electricity. Blasting circuits shall be protected from any contact between firing lines and overhead powerlines which could result from the force of a blast.

Equipment/Tools—Surface and Underground

§ 57.6700 Nonsparking tools.

Only nonsparking tools shall be used to open containers of explosive material or to punch holes in explosive cartridges.

§ 57.6701 Tamping and loading pole requirements.

Tamping and loading poles shall be of wood or other nonconductive, nonsparking material. Couplings for poles shall be nonsparking.

Maintenance—Surface and Underground

§ 57.6800 Storage facilities.

When repair work which could produce a spark or flame is to be performed on a storage facility—

(a) The explosive material shall be moved to another facility, or moved at least 50 feet from the repair activity and monitored; and

(b) The facility shall be cleaned to prevent accidental detonation.

§ 57.6801 Vehicle repair.

Vehicles containing explosive material and oxidizers shall not be taken into a repair garage or shop.

§ 57.6802 Bulk delivery vehicles.

No welding or cutting shall be performed on a bulk delivery vehicle until the vehicle has been washed down and all explosive material has been removed. Before welding or cutting on a hollow shaft, the shaft shall be thoroughly cleaned inside and out and vented with a minimum ½-inch diameter opening to allow for sufficient ventilation.

§ 57.6803 Blasting lines.

Permanent blasting lines shall be properly supported. All blasting lines shall be insulated and kept in good repair.

General Requirements—Surface and Underground

§ 57.6900 Damaged or deteriorated explosive material.

Damaged or deteriorated explosive material shall be disposed of in a safe manner in accordance with the instructions of the manufacturer.

§ 57.6901 Black powder.

(a) Black powder shall be used for blasting only when a desired result cannot be obtained with another type of explosive, such as in quarrying certain types of dimension stone.

(b) Containers of black powder shall be—

(1) Nonsparking;

(2) Kept in a totally enclosed cargo space while being transported by a vehicle;

(3) Securely closed at all times when—

(i) Within 50 feet of any magazine or open flame,

(ii) Within any building in which a fuel-fired or exposed-element electric heater is operating; or

(iii) In an area where electrical or incandescent-particle sparks could result in powder ignition; and

(4) Open only when the powder is being transferred to a blasthole or another container and only in locations not listed in paragraph (b)(3) of this section.

(c) Black powder shall be transferred from containers only by pouring.

(d) Spills shall be cleaned up promptly with nonsparking equipment. Contaminated powder shall be put into a container of water and shall be disposed of promptly after the granules have disintegrated, or the spill area shall be flushed promptly with water until the granules have disintegrated completely.

(e) Misfires shall be disposed of by washing the stemming and powder charge from the blasthole, and removing and disposing of the initiator in accordance with the requirement for damaged explosives.

(f) Holes shall not be reloaded for at least 12 hours when the blastholes have failed to break as planned.

§ 57.6902 Excessive temperatures.

(a) Where heat could cause premature detonation, explosive material shall not be loaded into hot areas, such as kilns or sprung holes.

(b) When blasting sulfide ores where hot holes occur that may react with explosive material in blastholes, operators shall—

(1) Measure an appropriate number of blasthole temperatures in order to assess the specific mine conditions prior to the introduction of explosive material;

(2) Limit the time between the completion of loading and the initiation of the blast to no more than 12 hours; and

(3) Take other special precautions to address the specific conditions at the mine to prevent premature detonation.

§ 57.6903 Burning explosive material.

If explosive material is suspected of burning at the blast site, persons shall be evacuated from the endangered area and shall not return for at least one hour after the burning or suspected burning has stopped.

§ 57.6904 Smoking and open flames.

Smoking and use of open flames shall not be permitted within 50 feet of explosive material except when separated by permanent noncombustible barriers. This standard does not apply to devices designed to ignite safety fuse or to heating devices which do not create a fire or explosion hazard.

General Requirements—Underground Only

§ 57.6960 Mixing of explosive material.

(a) The mixing of ingredients to produce explosive material shall not be conducted underground unless prior approval of the MSHA district manager is obtained. In granting or withholding approval, the district manager shall consider the potential hazards created by—

(1) The location of the stored material and the storage practices used;

(2) The transportation and use of the explosive material;

(3) The nature of the explosive material, including its sensitivity;

(4) Any other factor deemed relevant to the safety of miners potentially exposed to the hazards associated with the mixing of the bulk explosive material underground.

(b) Storage facilities for the ingredients to be mixed shall provide drainage away from the facilities for leaks and spills.

RIN 2120–AF09

Training and Checking in Ground Icing Conditions

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Interim final rule; request for comments.

SUMMARY: This interim final rule requires part 125 certificate holders to provide pilot testing on conducting operations in ground icing conditions, part 135 certificate holders to provide pilot training on conducting operations in ground icing conditions, and part 125 and 135 certificate holders to check airplanes for contamination (i.e., frost, ice, or snow) prior to takeoff when ground icing conditions exist. This rule is necessary because accident statistics and experience indicate the importance of effectively determining whether the airplane's wings and control surfaces are free of all frost, ice, or snow prior to beginning a takeoff. The rule is intended to provide an added level of safety to flight operations in ground icing conditions under parts 125 and 135.

DATES: This interim final rule is effective January 31, 1994. Additional comments must be received not later than April 15, 1994.

ADDRESSES: Comments on this interim final rule should be mailed, in triplicate, to: Federal Aviation Administration, Office of the Chief Counsel, Attention: Rules Docket (AGC–200), Docket No. 27459, 800 Independence Ave., SW., Washington, DC 20591. Comments delivered must be marked Docket No. 27459. Comments may be examined in room 915G weekdays between 8:30 a.m. and 5 p.m., except on Federal holidays.

FOR FURTHER INFORMATION CONTACT: Larry Youngblut, Flight Standards Service, Regulations Branch, AFS–240, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591, telephone (202) 267–8096.

SUPPLEMENTARY INFORMATION:

Background

On September 21, 1993, the FAA published proposed requirements for ground deicing procedures for parts 125 and 135 certificate holders (58 FR 49164). Under the proposal and this interim final rule, when ground icing conditions exist, parts 125 and 135 certificate holders are required to check their airplanes for contamination prior to beginning takeoff. In addition, under the proposed and final revisions to part 125, certificate holders are required to provide pilot testing on ground deicing/anti-icing procedures, and under proposed and final revisions to part 135, certificate holders are required to provide pilot training on ground deicing/anti-icing procedures.

The FAA proposed the requirements in response to part 135 accidents that have been caused by pilots beginning takeoff with contamination adhering to critical airplane surfaces. Regulations covering procedures for ground icing conditions under parts 121, 125, and 135 have for many years relied on the basic "clean aircraft" concept, i.e., that no person may take off an airplane when frost, ice, or snow is adhering to the wings, control surfaces, or propellers of the airplane (§§ 121.629, 125.221, 135.227). Under these regulations, ultimate responsibility for determining that the airplane is free of contamination in icing conditions and thus complies with the "clean aircraft" concept rests with the pilot-in-command (PIC). Both the FAA and industry have developed guidance and recommended procedures to assist the PIC in making that determination.

In 1992, due to a number of ground icing related accidents that had occurred in part 121 operations and in response to industry-wide recommendations to improve the safety of operations during ground icing conditions, the FAA amended the part 121 regulations (57 FR 44924, September 29, 1992). The amended regulations retain the "clean aircraft" concept and in addition, require part 121 certificate holders to establish and comply with an FAA-approved ground deicing/anti-icing program.

At the time of the part 121 rulemaking, the FAA did not include parts 125 and 135 because of time constraints associated with that rulemaking and the need for further FAA review to determine the appropriateness of applying a similar rule to other types of operations.

Since that time, the FAA has reviewed the accident history for part 125 and 135 operations, conferred with industry representatives, and studied the recommendations from the National Transportation Safety Board (NTSB) and the General Accounting Office (GAO). Based on this review, the FAA today adopts interim final rules for part 125 and 135 certificate holders that are designed to achieve the same results as the recent part 121 regulations on ground deicing/anti-icing procedures.

This rule is based partly on the different types of aircraft operated under part 135 and the differences between how part 135 certificate holders operate as compared to part 121 certificate holders. It also reflects part 135 accident data which indicates pilots may lack full awareness of the dangers associated with takeoff with contamination adhering to the airplane's critical surfaces. In this rule the FAA is revising part 135 pilot training requirements to include training on the hazards associated with operating in ground icing conditions.

A part 135 operator that does not expect to authorize takeoffs in ground icing conditions is not required to incur the cost of training its pilots on operating aircraft in ground icing conditions. However, no certificate holder may authorize a takeoff and no pilot may take off unless the pilot has completed the training required in § 135.341 and described in § 135.345 for operating in ground icing conditions.

In addition to revised training, the rule also requires that whenever frost, ice, or snow may reasonably be expected to adhere to the airplane, the certificate holder must complete an approved pretakeoff contamination check within 5 minutes of beginning takeoff, comply with an approved alternative procedure (e.g., when technology permits, having approved ice detectors or sensors installed on the airplane's wings and control surfaces), or comply with the part 121 deicing/anti-icing rule.

Operations conducted under part 125 are also included in this rule. Part 125 covers passenger carrying and cargo carrying operations involving airplanes with a seating configuration of 20 or more passengers or a maximum payload capacity of 6,000 pounds or more, when common carriage is not involved. Although the FAA's review of accident history does not reveal any ground icing accidents or incidents during part 125 operations, the types of airplanes flown are similar to those used in parts 121 and 135, the same airports are used and the same weather conditions are encountered. Thus, operations conducted under part 125 are equally susceptible to the hazards associated with operating during ground icing conditions.

While most part 125 operators use the same type airplanes as those used in part 121 operations, the size and scope of part 125 operations are more similar to the size and scope of most part 135 operations. For example, the number of aircraft used, the number of employees, and the extent of direct crew involvement for part 125 operations are more similar to part 135 operations than to part 121 operations. For this reason, the FAA is issuing rules for part 125 certificate holders that are comparable to those being required for part 135 certificate holders.

Unlike part 135, which contains pilot training requirements, part 125 contains pilot testing requirements. Therefore, under the rule, pilots operating under part 125 are required to be tested on the subject areas relating to ground icing conditions and procedures similar to those contained in the part 135 training requirements. Like their part 135 counterparts, part 125 certificate holders are also required to complete a pretakeoff contamination check within 5 minutes prior to beginning takeoff anytime conditions are such that frost, ice, or snow may reasonably be expected to adhere to the airplane. Alternatively, the certificate holder may comply with the part 121 deicing/anti-icing rule or with an approved alternative procedure, such as, when technology permits, having approved ice detectors or sensors installed on the airplane's wings and control surfaces.

This rule does not require part 125 and 135 certificate holders that do not anticipate operating during ground icing conditions to train or test their pilots or develop pretakeoff contamination check procedures. However, if pilots of a certificate holder that chooses not to train or develop deicing procedures encounter ground icing conditions, they will not be able to take off until such conditions no longer exist. Thus, the FAA is providing flexibility for certificate holders so they may determine to what extent this amended rule affects their operations.

The present provisions in parts 125 and 135 allowing takeoff with polished frost on the aircraft are retained. In addition, the amendments to parts 125 and 135 do not change the FAA's policy of permitting takeoff with small amounts of frost on the underwings in the area of fuel tanks of certain airplanes when authorized by the Administrator. The FAA has authorized takeoffs with small amounts of frost near the fuel tanks when this frost is caused by cold soaked fuel and when this frost is within aircraft manufacturer established limits that have been approved by FAA aircraft certification offices and these limits are stated in aircraft maintenance or aircraft flight manuals.

Helicopter operations conducted under part 135 have not been included in this rule because helicopter design characteristics and operations differ in many ways from airplane operations under part 135. However, the "clean aircraft" concept in § 135.227(a) continues to apply to helicopters. The FAA will continue to review whether additional deicing rulemaking is required for helicopters.

Discussion of Comments

General

More than 70 comments were received. Eighty percent of these were from part 135 certificate holders and most of these commenters objected to all or parts of the proposed rule. Comments were also received from associations representing part 135 air carriers, pilots, as well as other organizations dedicated to aviation safety. These associations and organizations, although generally supporting the intent of this rulemaking, also objected to various parts of the proposed rule. The FAA has carefully considered all of the comments received. A full discussion of comments and FAA responses follows.

Additional Comment Period

Several commenters object to the 15-day comment period and many more object to the rush to place this rule in effect for the 1993–1994 winter season. Several suggest that the FAA issue this rule as an interim final rule with time for additional comment as was done for the part 121 rule last year.

FAA Response

While the comment period was shorter than normally provided, the interest of aviation safety requires accelerated rulemaking to assure adequate ground deicing/anti-icing rules for this winter. In response to the comments received, the FAA agrees that it is in the public interest to make this an interim final rule, as proposed, and to provide an additional comment period to obtain further comments on the rule this winter. All comments received before April 15, 1994, will be carefully considered. If warranted, the FAA will make changes to the rule.

Applicability

The proposed and interim final rule apply to certificate holders operating airplanes under parts 125 and 135 in ground icing conditions.

One helicopter operator states that there is no justification for training its personnel on operations in ground icing conditions since helicopters are prohibited from operating in falling or blowing snow or in icing conditions. One commenter states that part 125 operators should be grouped with part 121 operators rather than with part 135 operators. Two persons operating single-engine airplanes, VFR only, questioned the applicability of the proposed rule to their operations. One stated his understanding that the rule would not apply to his business since he does not fly in icing conditions.

The Air Line Pilots Association (ALPA), while generally supporting the proposed rule, states that the proposal fosters "perpetuation of two levels of safety for scheduled air carrier operations." ALPA states that it has a policy goal of one level of safety for the traveling public and that this goal means "that aircraft having 10 seats or more being operated as a scheduled commuter air carrier should be held to the same safety standards required of scheduled part 121 air carriers." ALPA addresses and to some extent disputes each of the factors cited by the FAA (airplane size and design, pilots more personally involved in flight details, faster turn around time, shorter delays) for differentiating between part 135 and part 121 operations. ALPA concludes that "the option to choose § 121.629 requirements for part 135 scheduled commuter air carriers should be changed to a requirement."

The Aviation Consumer Action Project (ACAP) states that it "joins the NTSB, the GAO, the Dryden Commission and the Flight Safety Foundation in advocating one standard of safety for all scheduled air carriers."

FAA Response

The proposed and interim final rule language of §§ 135.227(b) and 135.345(b)(6)(iv) applies to airplane operations. Thus, no new requirements apply to helicopters. Persons who do not operate airplanes in potential ground icing conditions are not affected by this rule. This rule does not address inflight icing conditions.

In regard to ALPA's and ACAP's comments, the FAA believes that this rule provides an equivalent level of safety to the traveling public. Sections 121.629, 125.221, and 135.227 all embody the clean aircraft concept. The differences within these rules are the methods involved in assuring compliance. The FAA's goal in this rulemaking is twofold. First, as in part 121, pilots will be made fully aware, through training, of the dangers involved in beginning takeoff with contamination adhering to the airplane. Second, as in the amended § 121.629, pilots will be required to accomplish one or more checks (pretakeoff and/or pretakeoff contamination) prior to beginning takeoff. Requiring that a pretakeoff contamination check be completed within 5 minutes prior to beginning a takeoff is intended to provide an equivalent level of safety to

§ 121.629. The FAA has fully considered ALPA's comments on the FAA's rationale for differentiating between part 135 and part 121 operations and for proposing different rules for the different types of certificate holders. The FAA believes, for the reasons stated in the preamble to the NPRM and in this rulemaking that significant differences exist, and these differences justify a different means of achieving the same clean aircraft concept that has been required under both parts for many years.

As explained above, part 125 certificate holders have been grouped with part 135 operators in this rulemaking because their operations are more similar to part 135 operations in size and scope than to part 121 operations.

Justification

Virtually all of the adverse comments received question the FAA's justification for the rule. One commenter states that, since there have been no accidents attributed to ground icing by part 125 certificate holders, "that rate will be difficult to reduce."

Most commenters state that the 14 ground-icing related accidents involving airplanes operating under part 135 during the period 1984–1992 do not justify the rule. These commenters point out that in almost all of these accidents it is likely that the operator was in violation of the present requirements. These commenters state that what is needed is compliance with existing rules, not new rules. Also, a large number of commenters state that in most of the cited accidents poor judgment was involved and as one commenter states, "no amount of rule-making or training will improve the judgment or common sense qualities of these types of individuals."

FAA Response

The FAA recognizes that no amount of rulemaking will ensure 100% compliance with the clean aircraft concept; however, the FAA believes that the training and testing required under this rule will create an increased awareness among part 125 and part 135 pilots that will assist and improve pilots' judgment and decision-making skills.

As is stated in the proposed rule preamble, a common thread throughout the accidents and incidents cited was the pilots' apparent lack of awareness of the potential hazard from even small amounts of frost, ice, or snow on an airplane's wings and control surfaces. Thus, the FAA has determined there is sufficient evidence to justify additional training or testing and pretakeoff checking procedures to ensure that the clean aircraft concept is met prior to a pilot beginning takeoff during ground icing conditions. Specifically part 125 pilot testing and part 135 pilot training must address the elements set forth in §§ 125.287(a)(9) and 135.345(b)(6)(iv). Pretakeoff checking procedures are set forth in §§ 125.221(b) and 135.227(b).

Operating Limitations—General

Proposed and final §§ 125.221(a) and 135.227(a), which require a "clean aircraft" in order to take off, contain the same requirements and exception as contained in current §§ 125.221(a) and 135.227(a).

One commenter states that a light coating of frost adhering to a helicopter rotor blade should not pose a threat to the safe operation of the aircraft. The commenter believes that it should be up to the pilot to determine when an accumulation of frost should be removed. The commenter states that no person should attempt to operate a helicopter if ice or snow is adhering to the blades.

Proposed and final §§ 125.221(b) and 135.227(b) are new and require that during ground icing conditions an aircraft may not take off unless the pilot has completed all applicable training as required by §§ 125.287(a)(9) or 135.341 (described in § 135.345) and unless other specified requirements are met. One commenter states that the reference in part 135 should be to § 135.345 (which specifies the required training for operating airplanes during ground icing conditions in paragraph (b)(6)(iv)) rather than to § 135.341.

FAA Response

Prohibiting a pilot from taking off if frost is adhering to a rotor blade has been the rule in part 135 for many years. No change was proposed to this requirement and hence the requirement is not subject to change in the interim final rule.

Proposed § 135.227(b) references § 135.341 because that section specifically requires part 135 certificate holders, other than those that use only one pilot in their operations, to establish and maintain an approved pilot training program. This training is described further in § 135.345.

Underwing Frost

Proposed §§ 125.221(a)(2) and 135.227(a)(2) would allow takeoffs to be made with frost under the wing in the area of the fuel tanks if authorized by the Administrator.

One commenter states that since "no hazard exists from underwing frost in the area of fuel tanks, the requirement for FAA approval should be deleted."

FAA Response

The proposed language in §§ 125.221(a)(2) and 135.227(a)(2) provides a regulatory mechanism for allowing takeoffs with small amounts of unpolished frost in the area of the fuel tanks. Technically, under the existing FAR takeoffs with any amount of unpolished frost are prohibited. Therefore, the reference in the rule to "FAA approval" is retained.

Pretakeoff Contamination Check

Proposed §§ 125.221(b)(1) and 135.227(b)(1) would require a pretakeoff contamination check to ensure that the wings and control surfaces are free of frost, ice, or snow. This check would have to be completed within 5 minutes prior to takeoff.

A number of commenters object to the pretakeoff contamination check contained in new § 135.227(b)(1). The most serious concern of these commenters is the requirement that the check must be completed within 5 minutes prior to takeoff. Commenters state that the 5-minute limitation is unrealistically short and that it would disrupt most operations. The Regional Airline Association (RAA) states that the proposed rule would require this check within 5 minutes of takeoff *"regardless of the elapsed time since being deiced, the type of fluid used, or holdover time* unless the operator complies with the entire part 121 rule or is able to install and use approved ice detectors or sensors." (emphasis in original). RAA states that this proposed rule "is more restrictive than the part 121 rule and is inconsistent with the proposed requirement that pilots must be trained in the use of holdover times for fluids being used." RAA recommends that the FAA in the final rule recognize that takeoff within recognized holdover times would be an acceptable alternative to the pretakeoff contamination check.

The National Air Transportation Association (NATA) states that the 5 minute limit for a contamination check is unnecessary and, perhaps, dangerous. NATA suggests that pilots, "in an effort to get their 'wheels in the well' in less than 5 minutes, may be tempted or even feel compelled to cut corners, to hasten through or abbreviate check lists, etc."

Several commenters point out that the description of the pretakeoff contamination check should read "within 5 minutes prior to beginning takeoff" as it does in part 121 rather than "within 5 minutes prior to takeoff" as proposed. The Aviation Consumer Action Project (ACAP) expresses concern over whether the pretakeoff contamination check can be adequately conducted from inside the airplane. ACAP states that *"it is impossible for pilots to confidently identify the presence or absence of contamination due to ground icing without leaving the cockpit."* (emphasis in original). ACAP cites the November 1992 GAO recommendations in support of its position and urges the FAA to require tactile examination of critical surfaces as part of the approved pretakeoff contamination check for parts 125 and 135.

FAA Response

The FAA agrees with the commenter and to be consistent with the language used in § 121.629(c)(4), the word "beginning" has been inserted into the pretakeoff contamination check definition and the rule language has been changed accordingly. The requirement for a pretakeoff contamination check to be completed within 5 minutes prior to beginning takeoff should not be a burden for most part 125 and 135 certificate holders since, as a practical matter, some type of check must be made to ensure compliance with the clean aircraft concept requirements of the present rules. An approved pretakeoff contamination check is a check to make sure that the wings and control surfaces are free of frost, ice, or snow. The proposed and interim final rule language does not specify the details of this check or how many or what surfaces are to be checked, but leaves the airplane type specific details to be developed by the certificate holder to be submitted to the FAA for approval. This approval is the responsibility of the certificate holder's principal operations inspector (POI). Thus, this check could be the same procedure as presently conducted to assure compliance with the existing rules. Depending on the aircraft design, particularly for aircraft involved in part 135 operations, this check can often be made from inside the airplane.

The FAA believes that the proposed and adopted § 135.227(b)(1) is not more restrictive than the part 121 rule even though this new rule always requires a pretakeoff contamination check be completed within 5 minutes prior to beginning takeoff. A part 135 certificate holder that operates pursuant to § 135.227(b)(1) does not have to comply with several requirements applicable to part 121 certificate holders. Part 121 certificate holders, as part of their approved program, must: (1) Develop a management plan defining personnel responsibilities; (2) train all personnel associated with the ground deicing/anti-icing process; (3) use holdover timetables; and (4) complete pretakeoff check procedures. Despite not applying these requirements to part 135 certificate holders, the FAA believes that an equivalent level of safety is maintained by requiring part 135 certificate holders to always complete a pretakeoff contamination check within 5 minutes prior to beginning takeoff. In any event, § 135.227(b)(3) allows part 135 certificate holders, that find it more advantageous to their operations, to comply with § 121.629(c) in lieu of always accomplishing a pretakeoff contamination check.

The FAA does not believe completing a pretakeoff contamination check 5 minutes prior to beginning takeoff would encourage pilots to "cut corners or hasten through or abbreviate check lists" because the pretakeoff contamination check would be one of the last checks initiated prior to takeoff.

The FAA does not agree with the ACAP assertion that it is impossible for a pilot to complete the required pretakeoff contamination check without leaving the cockpit. The rule, as proposed and as issued, requires this check to be "established by the certificate holder and approved by the Administrator for the specific airplane type * * *" In approving pretakeoff contamination check procedures for different airplane types, the FAA will consider the effects of each airplane's design on the crew's ability to ensure that the clean aircraft concept is met.

Approved Alternative Procedures

Sections 125.221(b)(2) and 135.227(b)(2) allow certificate holders to use an approved alternative procedure (to the pretakeoff contamination check) to ensure that their airplanes are free of frost, ice, or snow.

One commenter questions the availability of guidelines for use by inspectors in the field in implementing such alternative procedures. This commenter says that the only existing guidelines are in § 121.629 and asks if the FAA would accept an alternative procedure that does not meet part 121 requirements. Finally, this commenter says that the technology to detect surface frost, ice, or snow on an aircraft on the ground does not exist. The use of such equipment as part of an alternative procedure, as suggested by the FAA, would therefore not be a viable alternative.

FAA Response

The option to use an approved alternative procedure was included to permit certificate holders to develop alternative check procedures, such as industry development of new technologies. The FAA believes that certificate holders should take the initiative to develop such alternative procedures and submit them to the FAA for approval. Any such alternative procedures must be specifically designed for the type of aircraft and the type of operations in which they would be used. Contrary to the commenter's assertion, § 121.629 does not contain guidance for approval of an alternative procedure. Advisory Circular (AC) 135–XX, which appears in today's issue of the **Federal Register**, provides both guidance and coordination procedures to POI's for evaluating alternative procedures.

Compliance with Part 121 Deicing/Anti-icing Program

Sections 125.221(b)(3) and 135.227(b)(3) allow certificate holders to use an approved deicing/anti-icing program that complies with § 121.629(c) as an alternative means to comply with this rule.

Two commenters point out that there is a difference between part 135 scheduled air carriers and part 135 on-demand air carriers and that the proposed rule can only apply to the former. One of these commenters says that on-demand carriers could not implement this type of program because of the vast number of airports served and the lack of company trained personnel other than pilots.

One of the above commenters also says that training and testing previously completed in voluntary compliance with the part 121 rule and the proposed advisory circular on ground deicing and anti-icing should be accepted as evidence of compliance with § 135.227(b)(3). This commenter says that the final rule or supporting advisory circular should contain language to ensure that field inspectors are aware that they do not have to retrain and retest to comply with the new rule.

One commenter says that the proposed rule's cross reference to § 121.629(c) does not take into account that part 135 operators do not maintain part 121 documents. This commenter says that this part 121 material should be contained in the part 135 proposed rule.

FAA Response

The FAA agrees that a deicing/anti-icing program that complies with § 121.629(c) would not be selected by most part 135 on-demand air carriers. It would probably be more efficient for

VOL 58 ISS 249 DEC 30 1993 UMI

VOL 58 ISS 249 DEC 30 1993 UMI

most of these carriers to comply with the training and pretakeoff contamination check requirements of new § 135.227(b)(1).

Any training voluntarily completed and documented under the part 121 rule would be viewed as satisfying the part 135 deicing/anti-icing pilot training requirements provided the training covered the elements included in this rule and if the training was specific to the aircraft and operations being conducted under part 135. Part 135 certificate holders can obtain the part 121 rule and associated advisory circular by contacting the person identified under **FOR FURTHER INFORMATION CONTACT.**

Initial, Transition, and Upgrade Ground Training

Proposed § 135.345 would require initial, transition, and upgrade ground training for pilots in the knowledge and procedures necessary for operating airplanes during ground icing conditions. (Similarly § 125.287 would require initial and recurrent testing for pilots on such knowledge and procedures.)

Many part 135 certificate holders commented on the proposed training requirements. Most of these commenters say that the proposed training is unnecessary because their training programs already cover frost, ice, and snow removal in accordance with existing part 135 requirements (§ 135.227). Several commenters say that such training is included in their curricula for cold weather operations. One commenter addresses deicing in the "preflight check" portion of its training manual. This commenter also points out that deicing is addressed in FAA Advisory Circular 91–13C, "Removal of Frost, Ice & Snow", as well as in pilot training for a private pilot's license and the private pilot and commercial pilot written tests.

A number of commenters say that it would be cumbersome, time consuming, and costly to create a separate training section on ground deicing. Other commenters say that the proposed rule is not justified considering the low accident rate involving part 135 airplanes where ground icing was the probable cause.

One commenter says that most part 135 operators fly into different type air fields, each with its own deicing procedures, and that it would be impractical to create a training manual to cover all the possible deicing situations.

One commenter says that if "hands on" training with glycol/water solutions becomes required, the result will be a significant environmental impact and much higher costs to the operator.

A number of commenters provide suggestions or alternative ways in which they argue the FAA should require training in ground icing conditions. One commenter says that training for pilots to recognize snow or ice, or its effects, should be covered under pilot certification rules in part 61. Another commenter says that training must be comprehensive to ensure improved pilot technique in icing conditions. A third commenter points out the need for additional training and testing covering the effect of contamination on airfoils and its relationship to aircraft performance for those seeking commercial pilot certification (parts 61 and 91).

Another commenter requests that the FAA develop and publish an Advisory Circular to provide suggested methods to comply with proposed § 135.345, particularly in terms of the 1 hour initial training requirement (during the first year after the effective date of the rule).

FAA Response

The FAA recognizes that most training programs under part 135 already address operations in ground icing conditions. The intent of this rule is to ensure that all pilots being trained under part 135 acquire knowledge and skills in all of the specific topics listed in § 135.345(b)(6)(iv). Certificate holders who already cover all of these topics can obtain approval by showing those parts of their training program to their POI's. Certificate holders who do not currently cover all of these topics will need to add whatever material is missing to their training programs. A separate training section on deicing is not necessary.

The FAA disagrees with commenters who suggest that training on ground icing characteristics should be exclusively covered under part 61 pilot certification rules or part 91 general operating rules. It is only under the part 135 training programs or part 125 testing programs that pilots can learn not only the characteristics of airplane surface contamination, but also the procedures for dealing with such contamination in their particular work environment. Much of the information learned under §§ 125.287(a)(9) and 135.345(b)(6)(iv) will be tailored to the operations of each certificate holder.

FAA developed advisory material is discussed under the implementation section of this preamble.

Recurrent Training

Section 135.351 requires recurrent training for pilots on the subjects required for initial ground training on icing conditions, as appropriate, as well as emergency training.

One commenter says that the changes proposed for § 135.227 and § 135.345 are proposed for airplanes, yet the change proposed for § 135.351 applies to all aircraft.

FAA Response

The language added to § 135.351(b)(2) in both the proposed and interim final rule references §§ 135.341 and 135.345 so that the limitation to airplanes in these sections applies.

Implementation

The NPRM, published on September 21, 1993, allowed a 15-day comment period and proposed an effective date for all part 125 and 135 certificate holders of November 1, 1993. The preamble states that a certificate holder who intends to operate in ground icing conditions on or after that date would have to amend its approved training or testing program, initially train or test its pilots, develop procedures for accomplishing pretakeoff contamination checks for each type airplane, and have the FAA approve these procedures.

The preamble also states that the FAA is aware that requiring all pilots to be fully trained or tested by the effective date could be financially and logistically impractical for some certificate holders. Therefore, if training or testing cannot be completed as part of a certificate holder's established initial training or testing program by the effective date, the FAA announced that it would allow certificate holders to submit training or testing materials for approval by the certificate holder's POI. For this first year, the FAA has determined that approved pilot bulletins or other written take-home training materials (e.g., self-graded quizzes or video tapes) will be sufficient for initial pilot training or testing. If pilots complete these approved materials, the FAA would consider initial training/testing provisions of this rule satisfied. The certificate holder could then integrate these materials into its established training or testing program.

A number of comments were received on implementation. All comments state that the implementation date is unrealistic. One commenter states that the implementation time should be at least as long as that allowed for part 121 and another that the date for completion of pilot training programs should not be sooner than 90 days after issuance of FAA guidance material. Another commenter requests there be a phase-in allowed, beginning with those operations most likely to encounter

ground icing conditions. Several commenters need clarification on what must be accomplished by the implementation date.

Some commenters believe that the FAA cannot approve the programs in such a short time. In connection with FAA approval, one commenter asks what the consequences will be for certificate holders who after complying with the provisions of the new rule do not receive the required Operations Specifications and training program approval from the FAA by the deadline. This commenter would like an FAA policy statement specifying the options available to air charter operators who find themselves not in compliance through no fault of their own. The same commenter asks if an FAA approved annotation in a certificate holder's Operations Specifications to not attempt a takeoff when ground icing or falling snow conditions exist would meet the provisions of the proposed rule. One commenter says that, in its opinion, an amendment to the Aircraft Flight Log, and a new form would have to be developed, approved, and reproduced to show compliance with the pretakeoff contamination check. The time frame for such approval is approximately 90 days.

One commenter points out that FSDO offices are not fully staffed and that it would be difficult for POIs to review and approve these training programs in the time frame outlined in the notice (especially considering the proposed requirement that POIs review and approve pretakeoff contamination check procedures under proposed § 135.227(b)(1)).

One commenter recommends that the final preamble specifically allow for the use of take-home brochures, video tapes, self-grading quizzes or other types of review material as the part 121 interim final rule preamble allowed. Another commenter says that, because of the FAA imposed time line, the FAA should allow initial training and testing material to be distributed to flight crewmembers concurrent with the FAA approval process.

Two commenters mention that the guidance material promised by the FAA has not been issued and that complying with the rule will be difficult without FAA guidance.

FAA Response

The FAA's intent in this action was to have the rule implemented by the winter of this year. The FAA recognized that this would be a short implementation period, but believed that most part 125 and 135 certificate holders operating in ground icing conditions already have some type of procedures for ensuring compliance with the clean aircraft concept while operating during ground icing conditions (in compliance with §§ 125.221 and 135.227) and provide pilot training on these procedures. Therefore, to comply with this interim final rule, a certificate holder must have the training or testing program approved by the FAA, initially train or test its pilots, develop procedures for accomplishing pretakeoff contamination checks for each type airplane, and have these procedures approved by the FAA. If a certificate holder only provides minimal training on procedures for ground icing conditions now, the time frame does impose a greater burden. The FAA has developed a draft advisory circular, AC 135–XX, which when final will provide an outline of the material that the FAA would find acceptable to be included within a certificate holder's training program or testing procedure. The draft AC is published in this issue of the **Federal Register**.

After POI approval and completion of the approved materials by the certificate holder's pilots, the certificate holder will have satisfied the initial training/testing provisions of this rule. As mentioned previously, these materials may be take-home materials, video tapes, self-grading quizzes, or other materials. In effect, this allows a certificate holder to quickly provide initial training to its pilots and provides additional time for the certificate holder to amend its established training program.

The FAA does not believe that a phase-in of ground operating deicing procedures would accomplish the intent of the rule; however, if a certificate holder does not conduct operations with certain airplanes in ground icing conditions, procedures and training for these airplanes are not required by this rule.

The FAA has decided to make the rule effective on January 31, 1994. This will provide approximately the same time allowed after publication of the part 121 rule.

The FAA intends to move quickly to review and approve or deny the pretakeoff contamination check procedures and training or testing materials. The FAA has conducted training sessions for POIs and has provided POIs with guidance materials to facilitate their review.

Discussion of Cost Comments

Actual Operational Costs

One commenter states that the cost figures contained in the NPRM Regulatory Evaluation includes only training costs. Moreover, the commenter states that the actual operational costs need to be analyzed as well, prior to a fair benefit-cost determination. Another commenter states that the most important cost element has been ignored—the cost of purchasing, maintaining, and operating the deicing equipment.

FAA Response

Part 135 operators are not expected to incur significant operational costs. Of the three types of potential operational cost components (training and related functions, deicing fluids, and deicing equipment), only training is expected to impose significant incremental costs. Since deicing equipment is already in place at all major and medium size hub airports, it is unlikely that additional deicing equipment will be required by part 135 operators at these airports. Even though the deicing rule for part 121 had little, if any, impact on small airports, deicing equipment is already being used at these airports. During icing conditions, parts 125 and 135 aircraft operators at all airports (regardless of size) in the U.S. are required by §§ 125.221(b) and 135.227(b) of the FAR to utilize the FAA's "Clean Aircraft Concept," i.e., no aircraft is permitted to take off unless it is free of contamination (i.e., ice, snow, frost, etc.). Because of enhanced safety awareness as a result of the additional testing and training required by this rule, the FAA expects some increase in the use of deicing equipment. However, the need for additional deicing equipment is expected to be insignificant.

The FAA has not included any delay costs in this regulatory evaluation that might be incurred as a result of increased deicing. The FAA believes that delays for part 135 aircraft operations would not be significant for several reasons. First, part 135 operations, because of their flexible runway requirements and quick turnaround times, often do not experience the same delays associated with larger part 121 operations. Also, many part 135 and part 125 operations take place at small airports that do not experience large numbers of simultaneous arrivals and departures associated with the larger air carrier's hub and spoke operations.

The FAA invited comments associated with delay costs for the interim part 121 rule and none were received. However, the FAA invites part 135 and part 125 certificate holders to comment on any delay costs associated with this interim final rule.

VOL 58 ISS 249 DEC 30 1993 UMI

Reduction in Services

One commenter states that the unnecessary requirements of this proposed rule and similar types of programs drive up costs for operators in an already floundering industry. In addition, this commenter contends that higher costs will ultimately reduce the services his company can offer to the flying public.

This commenter also asserts that station and vender auditing will increase dramatically for certain operators. Furthermore, the commenter notes that many of the industry's single-engine 135 operators will require deicing equipment at stations where they previously needed none, or at least require regular auditing of vendors. Currently, these vendors are seldom used, if ever. Additional deicing equipment purchase expenses for these operations will mount astronomically, according to this commenter.

FAA Response

A review of the accident history, as discussed in the background section of the NPRM, indicates this rule is necessary. While the commenter believes that station and vendor auditing will increase, the commenter failed to provide any data for the agency to evaluate nor has the commenter disproved the FAA's original assessment of costs and benefits associated with this rule. The comment regarding the need for additional deicing equipment has been discussed previously.

Loss of Revenue Days

One commenter notes that besides the added cost of the additional training, there will be a loss of revenue on days they are unable to fly due to this rule being implemented too close to the winter season.

FAA Response

The FAA disagrees with this commenter. The loss in revenues on days an air carrier is unable to fly during icing conditions would not be attributed to this rule. Currently, no air carrier can take off from a U.S. airport (regardless of size) unless it is free of contamination, as required by §§ 125.221(b) and 135.227(b) of the FAR. More on this issue and related matters is discussed in detail under "The Implementation" section of this document.

Number of Operators Impacted

This commenter states that the FAA's estimate that 70 percent of the part 135 unscheduled operators are potentially impacted by the proposed rule is not realistic, i.e., this 70 percent estimate should be higher. This commenter also mentions that Docket No. 27459 is unjustified based on potential costs and benefits.

FAA Response

The FAA disagrees with this commenter. As explained in the full regulatory evaluation, an estimated 70 percent of part 135 unscheduled aircraft operators are expected to be impacted by the rule. This assessment is stated as an assumption based on data received from the FAA's Office of Flight Standards, Management Information Section, in Oklahoma City, Oklahoma. The data represent the total number of active parts 125 and 135 certificate holders by city, state, name of operator, number of employees, type of aircraft, and number of seats. Based on this information, the FAA was able to estimate the number of air taxi certificate holders in warm climates who would not be impacted by this proposed rule, since such certificate holders would rarely encounter ground icing conditions. More descriptive information on the derivation of the 70 percent estimate is contained in the full evaluation of this rule.

Lost Revenue and Reduced Aircraft Operations

Several commenters contend that as the result of the proposed rule, additional research will have to be conducted for operations in and out of airports that are not certified for part 121 operations. Furthermore, these commenters state that, in most instances, they have found that smaller airports servicing part 135 on-demand operators do not have deicing equipment readily available that will be required to comply with the proposed rule. Without such equipment at small airports, on-demand operator services could be reduced according to these commenters. In conclusion, these commenters point out that the proposed rule could result in considerable loss in revenue and discontinued operations by some operators.

FAA Response

As stated in the NPRM, the FAA intends to issue an interim final rule. Therefore, the FAA would continue to accept comments from all impacted parties on costs that are not adequately reflected in its regulatory evaluation, especially with regard to the purchase of additional deicing equipment and deicing fluid by operators for use at small airports. As the result of the FAA's current "Clean Aircraft Concept", the FAA believes the demand for additional deicing equipment at small airports will be insignificant, and little if any reduction in on-demand service will occur.

Accurate Cost Estimation

According to several commenters, the cost estimates of the proposed rule cannot be calculated accurately. They contend that additional information is required to make this determination. Such information should contain answers to these questions: what is the availability of deicing equipment at smaller, non-hub airports complying with the NPRM?, how much deicing equipment is available at each destination/departure airport?, will additional equipment be required to complete the pre-takeoff contamination checks?, etc.

FAA Response

The FAA has estimated costs of this rule based on the best available data. These commenters, while disagreeing with the FAA cost estimates, did not provide any additional data. Therefore, the FAA retains its original cost estimates. However, as stated in the NPRM, the FAA is issuing an interim final rule. Therefore, the FAA will continue to accept comments from all impacted parties on costs that are not adequately reflected in its regulatory evaluation, especially with regard to the purchase of additional deicing equipment and deicing fluid by operators.

Modification of Training/Testing Program Costs

One operator asserts that the FAA economic impact of the proposed rule is misstated. According to this commenter, modification of the manuals will take 8 hours for each operator plus at least 8 hours of FAA review time. Coupled with the revision of all manuals for the industry's pilots and training, this commenter estimates the cost burden to his company to be $3,000 rather than $1,350 as estimated by the FAA.

FAA Response

The FAA disagrees with this commenter. Using 8 hours, the FAA was unable to derive the commenter's cost estimate of $3,000 for the modification of its manuals. This problem is due to the fact that the commenter fails to provide specific details of how the cost estimate was derived. In the full regulatory evaluation, the FAA provides detailed means on how it derived its cost estimates of $1,350 to $2,700 for the modification of manuals (and other materials) by operators. Without a similar illustration or explanation, the FAA is unable to evaluate the merits of this commenter's remarks. Therefore, the FAA retains its original cost estimates.

Environmental Analysis

This rule is a federal action that is subject to the National Environmental Policy Act (NEPA). Under applicable guidelines of the President's Council on Environmental Quality and agency procedures implementing NEPA, the FAA normally prepares an environmental assessment (EA) to determine the need for an environmental impact statement (EIS) or whether a finding of no significant impact (FONSI) would be appropriate. (40 CFR 1501.3; FAA Order 1050.1D appendix 7. par 4 (a)). In the NPRM the FAA requested comments on the following:

(1) Whether the proposed rule will increase the use of deicing fluid,

(2) The impact, if any, of using these deicing fluids on taxiways "just prior to takeoff," and

(3) Containment methods currently used that can be adapted to other locations on an airport.

Two commenters state that the proposed rule will lead to increased use of deicing fluids. One commenter believes that the rule will cause excessive and unnecessary use of deicing fluids that will result in disposal problems and increased expense. Another commenter questions FAA's belief that "the rule will not promote significant additional use of deicing fluids" when the use of these fluids is the only method discussed in planned training and testing operations.

FAA Response

An EA that supports a FONSI is included in the docket for this rulemaking. The EA discusses in detail the potential effect of this rule and addresses in general terms the issues raised by the comments summarized above. The following discussion addresses these issues.

With respect to the potential for significantly increased use of deicing fluids, this is unlikely because no changes in deicing/anti-icing operations are required under the proposed rule, and therefore little, if any incremental increase in impact is anticipated due to implementation of the proposed rule. Training on fluids is only required for part 125 and part 135 certificate holders that presently use or plan to use deicing fluids. Training focuses on increased training and awareness for the use of these fluids that will result in more effective use and application of the deicing fluids currently being used.

With respect to increased disposal problems, the characteristics of glycols which are the active component of deicing/anti-icing fluids (e.g., low toxicity, low ecotoxicology, low volatility, high biodegradability) lead to minor environmental and public health impacts. Mitigation measures for air (release reporting under CERCLA) and water quality (storm water discharge NPDES permits) will reduce the possible minor impacts even further, producing no significant impacts overall. And finally, the baseline environment of airports are already affected by ongoing airport operations, including current deicing/anti-icing programs.

Paperwork Reduction Act

Information collection requirements in these amendments to parts 125 and 135 have been approved by the Office of Management and Budget (OMB) under the provisions of the Paperwork Reduction Act of 1980 (Pub. L. 96–511). The OMB control number is 2120–0578.

Regulatory Evaluation Summary

The FAA has determined that this final rule is not a "significant rulemaking action", as defined by Executive Order 12866 (Regulatory Planning and Review). The anticipated costs and benefits associated with this final rule are summarized below. (A detailed discussion of costs and benefits is contained in the full evaluation in the docket for this final rule).

Costs

The FAA estimates that the total compliance cost of this final rule will be $8.1 million over the next 10 years, in 1992 dollars. On a discounted basis (using a 7 percent rate of interest), the total potential cost is $6.7 million. This estimate is based on costs to comply with three requirements: (1) Initial Training/Testing of Pilots, (2) Recurrent Training/Testing of Pilots, and (3) Modification of the Training/Testing Program. The cost of each of these components is discussed below.

Initial Training/Testing of Pilots

The FAA assumes that all pilots under part 125 will receive initial testing and pilots under part 135 will receive initial training of 1 hour during the first year after this rule becomes effective. Training and testing will be for pilots-in-command (PICs) and pilots second-in-command (SICs). Costs for these pilots are based on their hourly wage rates of $62 and $33, respectively. The cost of initial training and testing was derived based on the total number of PICs and SICs that are expected to be trained multiplied by their respective hourly wages.

Based on aircraft data obtained from the FAA Flight Standards Service Office, Information Management Section, there are an estimated 7,950 active fixed-wing aircraft operating under parts 125 and 135 that will be affected by the rule. However, many of these aircraft operate in climates that do not experience icing conditions; therefore, FAA estimates that about 7,950 (approximately 70 percent) will be affected by this rule. In order to estimate the total number of pilots that will be trained, the number of affected airplanes was multiplied by four pilots (two active and two reserve); this is approximately 29,300 pilots. Multiplying the number of pilots trained by their average hourly wage rate of $48 results in initial training/testing costs of $1.4 million (or $1.3 million, discounted).

Recurrent Training/Testing of Pilots

The recurrent training/testing required annually for each pilot will start in the second year of the 10-year time frame of the rule. The FAA estimates that the training will take approximately 15 minutes and cost $12 ($48 per hour x .25) per pilot. This cost estimate multiplied by the total number of pilots (29,300) results in estimated annual recurrent training costs of $350,000. Over the next 10 years, this cost will be $3.2 million (or $2.2 million, discounted).

Modification of Training/Testing Program

While the FAA cannot precisely estimate to what extent operators will incur costs as the result of modifying their respective training/testing programs, this evaluation assumes that some additional costs will be incurred. To calculate these costs, the FAA estimated that this rule will affect 97 scheduled part 135 operators, 2,043 unscheduled part 135 operators, and 26 part 125 operators. The one-time cost estimate of $2,700 (scheduled part 135 operators) and $1,350 (part 125 and unscheduled part 135 operators) for training/testing program modifications multiplied by the total number of operators amounts to $3.1 million (or $2.9 million, discounted). The FAA solicits comments prior to April 15, 1994 from the aviation community, particularly operators under parts 125 and 135, regarding the actual training costs and total compliance costs that are incurred.

VOL 58 ISS 249 DE 30 1993 UMI

Benefits

This final rule will generate potential safety benefits of $14.2 million (or $10.0 million, discounted) over the next 10 years, in 1992 dollars. These benefits will be the reduction in fatalities, serious injuries, and property loss from accidents involving ice contamination for airplane operations under parts 125 and 135.

To estimate the potential benefits associated with this rule, the FAA examined all of the part 135 icing accidents that have occurred from 1984 to 1992. A similar effort was employed for part 125 operations; however, there were no icing accidents or incidents involving part 125 operators. Even though there were no relevant part 125 ground icing accidents during the period examined, the FAA believes that there will be some part 125 future benefits from accidents avoided. Between 1984 and 1992, there were 14 accidents with 7 fatalities, 2 serious injuries, and 8 minor injuries. These accidents were examined closely to answer the following questions:

- To what extent will this rule have prevented the accident from occurring?
- What other factors (other than ice on the airframe) contributed to the accident?
- If there were other factors, how much did these factors contribute to the accident?

The analytical approach employed to quantify the potential safety benefits focuses on the increased safety awareness resulting from this additional training and testing and the improved checking procedures. Under this rule, a pilot will most likely perform a visual pretakeoff contamination check prior to departure. Alternatively, certificate holder's may have FAA approved ice detectors or sensors installed on the airplane's critical surfaces, or may comply with the part 121 deicing/anti-icing interim rule.

The FAA recognizes that there are many uncertainties when dealing with winter storms, human error, etc, and that even under this rule, it is possible that an accident may occur. Some of the 14 known accidents identified in this evaluation may have occurred even in the absence of icing conditions. Consequently, for purposes of this evaluation, the FAA is claiming as benefits generated by this rule, only 60 percent of the casualty losses from those 14 accidents. This estimate is based on the FAA's knowledge of ice contamination, similar issues related to part 121 operations, and review of those part 135 accidents involving icing conditions. The FAA realizes that there is still some uncertainty in the 60 percent effectiveness rate. Therefore, the FAA continues to solicit comments from the aviation community on the likelihood of this rule preventing these types of accidents.

To estimate the potential benefits of this rule, the FAA calculated the average annual number of accidents/incidents over the 9-year period. There were 14 accidents/incidents over the 9-year period averaging 1.6 (14/9) per year. Similarly, the average annual number of fatalities and serious injuries were .8 (7/9) and .2 (2/9), respectively. In order to provide the public and government officials with a benchmark comparison of the expected safety benefits of rulemaking actions with estimated costs in dollars, the FAA currently uses a minimum value of $2.5 million to statistically represent a human fatality avoided and $640,000 for each serious injury. These values are applied to the .8 annual fatalities and .2 annual serious injuries over the next 10 years. After including the average annual replacement value of the airplanes involved in these accidents/incidents, which is estimated to be approximately $280,000, the total benefits will be $23.7 million. Assuming that this rule is approximately 60 percent effective, the potential benefits will be $14.2 million, or $10.0 million discounted.

Conclusion to Cost/Benefit Analysis

This rule is expected to impose total costs estimated at $6.7 million (discounted) compared to total potential safety benefits estimated at $10.0 million (discounted). Therefore, the FAA has determined that this rule is cost-beneficial.

Final Regulatory Flexibility Determination

The Regulatory Flexibility Act of 1980 (RFA) was enacted by Congress to ensure that small entities are not unnecessarily and disproportionately burdened by government regulations. The RFA requires government agencies to determine whether rules that would have "a significant economic impact on a substantial number of small entities" and, in cases where they would, to conduct a Regulatory Flexibility Analysis.

According to FAA Order 2100.14A: Regulatory Flexibility and Guidance, a substantial number of small entities is defined as a number which is not less than eleven and which is more than one-third of the small entities subject to a proposed or existing rule. A significant economic impact on a small entity is an annualized net compliance cost which, when adjusted for inflation, equals or exceeds the significant cost threshold for the entity type under review.

The entities that will be affected by this rule are small operators that own, but not necessarily operate, nine or fewer aircraft. The FAA estimates that there are 26 operators under part 125, with an average of about two aircraft owned per operator. The FAA also estimates that there are 2,140 part 135 operators (97 scheduled and 2,043 unscheduled). On average, the unscheduled operators own fewer than four aircraft each. The scheduled operators own, on average, slightly more than 14 aircraft. Multiplying the $7.7 million cost of this rule by a capital recovery factor of .14278 (10 years, 7%), results in an annualized cost estimate of $1.1 million. This estimate of $1.1 million was subsequently divided by the total number of operators (2,166) and resulted in an estimated annual cost impact of about $500 per operator. This annualized cost estimate is less than the annualized threshold cost of $4,600 (1992 dollars). Therefore, this rule will not impose a significant economic impact on a substantial number of small aircraft operators.

International Trade Impact Statement

This rule will have no impact on the competitive posture of either U.S. carriers doing business in foreign countries or foreign carriers doing business in the United States. This assessment is based on the fact that this rule will impact operators engaged in U.S. domestic operations. These operators do not compete with operators engaged in similar activities in the United States.

Federalism Implications

The regulations herein will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this regulation will not have federalism implications to warrant the preparation of a Federalism Assessment.

Conclusion

The rule has been reviewed by the Office of Management and Budget under Executive Order 12866. This regulation is considered significant under DOT Regulatory Policies and Procedures for Simplification, Analysis, and Review of Regulations. In addition, the FAA certifies that this regulation will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

A final regulatory evaluation of the regulation, including a Final Regulatory Flexibility Determination and International Trade Impact Analysis, has been placed in the docket. A copy may be obtained by contacting the person identified under **FOR FURTHER INFORMATION CONTACT.**

List of Subjects

Air carriers, Air transportation, Aviation safety, Safety.

14 CFR Part 135

Air carriers, Air taxi, Air transportation, Aviation safety, Safety.

The Amendment

In consideration of the foregoing, the Federal Aviation Administration amends parts 125 and 135 of the Federal Aviation Regulations (14 CFR parts 125 and 135) as follows:

PART 125—CERTIFICATION AND OPERATIONS: AIRPLANES HAVING A SEATING CAPACITY OF 20 OR MORE PASSENGERS OR A MAXIMUM PAYLOAD CAPACITY OF 6,000 POUNDS OR MORE

1. The authority citation for part 125 continues to read as follows:

Authority: 49 U.S.C. 1354, 1421 through 1430 and 1502; 49 U.S.C. 106(g) (revised, Pub. L. 97–449, January 12, 1983).

2. Section 125.221 is amended by revising paragraph (a), by redesignating paragraphs (b) through (d) as paragraphs (c) through (e), respectively, and by adding a new paragraph (b) to read as follows:

§ 125.221 Icing conditions: Operating limitations.

(a) No pilot may take off an airplane that has frost, ice, or snow adhering to any propeller, windshield, wing, stabilizing or control surface, to a powerplant installation, or to an airspeed, altimeter, rate of climb, or flight attitude instrument system, except under the follow conditions:

(1) Takeoffs may be made with frost adhering to the wings, or stabilizing or control surfaces, if the frost has been polished to make it smooth.

(2) Takeoffs may be made with frost under the wing in the area of the fuel tanks if authorized by the Administrator.

(b) No certificate holder may authorize an airplane to take off and no pilot may take off an airplane any time conditions are such that frost, ice, or snow may reasonably be expected to adhere to the airplane unless the pilot has completed the testing required under § 125.287(a)(9) and unless one of the following requirements is met:

(1) A pretakeoff contamination check, that has been established by the certificate holder and approved by the Administrator for the specific airplane type, has been completed within 5 minutes prior to beginning takeoff. A pretakeoff contamination check is a check to make sure the wings and control surfaces are free of frost, ice, or snow.

(2) The certificate holder has an approved alternative procedure and under that procedure the airplane is determined to be free of frost, ice, or snow.

(3) The certificate holder has an approved deicing/anti-icing program that complies with § 121.629(c) of this chapter and the takeoff complies with that program.

* * * * *

3. Section 125.287 is amended by removing "and" at the end of paragraph (a)(7), removing the period at the end of paragraph (a)(8) and adding a semicolon in its place, and adding a new paragraph (a)(9) to read as follows:

§ 125.287 Initial and recurrent pilot testing requirements.

(a) * * *

(9) Knowledge and procedures for operating during ground icing conditions, (i.e., any time conditions are such that frost, ice, or snow may reasonably be expected to adhere to the airplane), if the certificate holder expects to authorize takeoffs in ground icing conditions, including:

(i) The use of holdover times when using deicing/anti-icing fluids.

(ii) Airplane deicing/anti-icing procedures, including inspection and check procedures and responsibilities.

(iii) Communications.

(iv) Airplane surface contamination (i.e., adherence of frost, ice, or snow) and critical area identification, and knowledge of how contamination adversely affects airplane performance and flight characteristics.

(v) Types and characteristics of deicing/anti-icing fluids, if used by the certificate holder.

(vi) Cold weather preflight inspection procedures.

(vii) Techniques for recognizing contamination on the airplane.

* * * * *

PART 135—AIR TAXI OPERATORS AND COMMERCIAL OPERATORS

4. The authority citation for part 135 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1355(a), 1421 through 1431, and 1502; 49 U.S.C. 106(g) (Revised Pub. L. 97–449, January 12, 1983).

5. Section 135.227 is amended by revising paragraph (a), by redesignating paragraphs (b) through (e) as paragraphs (c) through (f), respectively, and by adding a new paragraph (b) to read as follows:

§ 135.227 Icing conditions: Operating limitations.

(a) No pilot may take off an aircraft that has frost, ice, or snow adhering to any rotor blade, propeller, windshield, wing, stabilizing or control surface, to a powerplant installation, or to an airspeed, altimeter, rate of climb, or flight attitude instrument system, except under the following conditions:

(1) Takeoffs may be made with frost adhering to the wings, or stabilizing or control surfaces, if the frost has been polished to make it smooth.

(2) Takeoffs may be made with frost under the wing in the area of the fuel tanks if authorized by the Administrator.

(b) No certificate holder may authorize an airplane to take off and no pilot may take off an airplane any time conditions are such that frost, ice, or snow may reasonably be expected to adhere to the airplane unless the pilot has completed all applicable training as required by § 135.341 and unless one of the following requirements is met:

(1) A pretakeoff contamination check, that has been established by the certificate holder and approved by the Administrator for the specific airplane type, has been completed within 5 minutes prior to beginning takeoff. A pretakeoff contamination check is a check to make sure the wings and control surfaces are free of frost, ice, or snow.

(2) The certificate holder has an approved alternative procedure and under that procedure the airplane is determined to be free of frost, ice, or snow.

(3) The certificate holder has an approved deicing/anti-icing program that complies with § 121.629(c) of this chapter and the takeoff complies with that program.

* * * * *

6. Section 135.345 is amended by republishing the introductory text of paragraph (b), revising the introductory text of paragraph (b)(6), removing "and" at the end of paragraph (b)(6)(ii), adding "and" at the end of paragraph (b)(6)(iii),

and adding a new paragraph (b)(6)(iv) to read as follows:

§ 135.345 Pilots: Initial, transition, and upgrade ground training.

* * * * *

(b) For each aircraft type—

* * * * *

(6) Knowledge and procedures for—

* * * * *

(iv) Operating airplanes during ground icing conditions, (i.e., any time conditions are such that frost, ice, or snow may reasonably be expected to adhere to the airplane), if the certificate holder expects to authorize takeoffs in ground icing conditions, including:

(A) The use of holdover times when using deicing/anti-icing fluids;

(B) Airplane deicing/anti-icing procedures, including inspection and check procedures and responsibilities;

(C) Communications;

(D) Airplane surface contamination (i.e., adherence of frost, ice, or snow) and critical area identification, and knowledge of how contamination adversely affects airplane performance and flight characteristics;

(E) Types and characteristics of deicing/anti-icing fluids, if used by the certificate holder;

(F) Cold weather preflight inspection procedures;

(G) Techniques for recognizing contamination on the airplane;

* * * * *

7. Section 135.351(b)(2) is revised to read as follows:

§ 135.351 Recurrent training.

* * * * *

(b) * * *

(2) Instruction as necessary in the subjects required for initial ground training by this subpart, as appropriate, including low-altitude windshear training and training on operating during ground icing conditions, as prescribed in § 135.341 and described in § 135.345, and emergency training.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[AC No. 135-XX]

Proposed Advisory Circular on Ground Deicing and Anti-Icing Training, Testing, and Checking

AGENCY: Federal Aviation Administration, DOT.

ACTION: Request for comments on proposed advisory circular.

SUMMARY: Proposed advisory circular (AC) 135-xx, Ground Deicing and Anti-Icing Training, Testing, and Checking, provides guidance about ground deicing and anti-icing that should be incorporated in an air carrier's approved training program. This AC provides guidance about one method of complying with the requirements of revised Federal Aviation Regulation (FAR) § 135.227.

DATES: Comments must be received on or before February 28, 1999.

ADDRESSES: Written comments are invited on all aspects of the proposed AC. Commenters must identify file number AC 135-xx, Ground Deicing and Anti-Icing Training and Checking. Send all comments on the proposed AC to the following location: Federal Aviation Administration, Flight Standards Service, Commuter/Air Taxi Branch (Attention: AFS250), 800 Independence Avenue, SW., Washington, DC 20591.

FOR FURTHER INFORMATION CONTACT:

David Metzbower, Flight Standards Service, Commuter/Air Taxi Branch, AFS250, 800 Independence Avenue, SW., Washington, DC 20591; telephone: (202) 267-3762 (8 a.m. to 4:30 p.m. EST).

SUPPLEMENTARY INFORMATION: The guidance in this AC provides one method, but not the only method, of complying with the requirements of revised FAR § 135.227. This guidance material supplements the interim final rule, FAR § 135.227, which is being published in this issue. Due to the critical safety nature of this proposed AC, it is published in its entirety in order to allow commenters expedient access to the document.

Issued in Washington, DC on December 23, 1993.

Thomas C. Accardi,

Director, Flight Standards Service.

BILLING CODE 4910-13-P

Ground Deicing and Anti-icing Training and Checking (AFS-250; 135-XX)

1. *Purpose.* This advisory circular (AC) provides one means, but not the only means, of complying with Federal Aviation Regulations (FAR) §§ 135.227, 135.345, and 135.351 (referred to as the FAR part 135 ground deicing rule). This AC provides guidance about FAR §§ 135.227, 135.345, and 135.351. Specifically, the guidance in this AC concerns:

a. Ground deicing and anti-icing training requirements that must be incorporated into an approved training program for certain air carriers;

b. Ground deicing and anti-icing guidance for those air carriers that are not required to have an approved training program; and

c. The pretakeoff contamination aircraft check required of all FAR part 135 air carriers except those that develop an approved alternative procedure or comply with the FAR part 121 ground deicing rule contained in FAR § 121.629(c).

2. *Related FAR sections. a. Part 135, Subpart A—general.* Sections 135.23 and 135.25.

b. Part 135, Subpart B—flight operations. Sections 135.77, 135.79 and 135.81.

c. Part 135, Subpart D—VFR/IFR operating limitations and weather requirements. Section 135.227.

d. Part 135, Subpart E—flight crewmember requirements. Section 135.244.

e. Part 135, Subpart H—training. Sections 135.323, 135.325, 135.327, 135.329, 135.339, 135.341, 135.343, 135.345, 135.347, and 135.351.

f. Special Federal Aviation Regulation (SFAR) no. 58. Advanced Qualification Program.

3. *Related reading material.* The following material should be useful in developing material, instructions, and procedures for incorporation in the certificate holder's training programs and operations manual:

a. AC 20-117, Hazards Following Ground Deicing and Ground Operations in Conditions Conducive to Aircraft Icing.

b. Federal Aviation Administration (FAA) publication, Winter Operations Guidance for Air Carriers and Other Adverse Weather Topics.

c. AC 120-58, Pilot Guide for Large Aircraft Ground Deicing.

d. AC 120-XX Pilot Guide for Ground Deicing of Air Taxi and Commercial Aircraft.

e. AC 135-XX, Ground Deicing and Anti-Icing Training and Checking.

f. Society of Automotive Engineers (SAE):

(1) AMS 1424, Deicing/Anti-Icing Fluid, Aircraft, Newtonian—SAE Type I.

(2) AMS 1428, Fluid, Aircraft Deicing/Anti-Icing, Non-Newtonian, Pseudo-Plastic, SAE Type II.

(3) ARP 4737, Aircraft Deicing/Anti-Icing Methods with Fluids, for Large Transport Aircraft.

g. International Standards Organization (ISO) publications:

(1) ISO 11075, Aerospace—Aircraft de-icing/anti-icing newtonian fluids ISO type I.

(2) ISO 11076, Aerospace—Aircraft de-icing/anti-icing methods with fluids.

(3) ISO 11077, Aerospace—De-icing/anti-icing self propelled vehicles—Functional requirements.

(4) ISO 11078, Aerospace—Aircraft de-icing/anti-icing non-newtonian fluids ISO type II.

4. *Background.* a. The "clean aircraft" concept. The current regulations in FAR parts 121 and 135 rely on the "clean aircraft" concept; i.e., that no person may takeoff an airplane when frost, ice, or snow is adhering to the wings, control surfaces, or propellers of the airplane (FAR §§ 121.629 and 135.227). The rationale behind this concept is that the presence of even minute amounts of frost, ice, or snow (referred to as "contamination") on particular airplane surfaces can cause a potentially dangerous degradation of airplane performance and unexpected changes in

airplane flight characteristics. Under current regulations, ultimate responsibility for determining whether the airplane is free of contamination and complies with the "clean aircraft" concept rests with the pilot-in-command (PIC). Both the FAA and industry have developed guidance and recommended procedures that are designed to help the PIC in making that determination. These procedures include monitoring weather conditions and temperature changes, visual checks, and using deicing/anti-icing fluids. When conditions conducive to the formation of frost, ice, or snow on airplane surfaces exist at the time of takeoff, those surfaces must be checked for contamination in accordance with FAR § 135.227. When contaminants are adhering to airplane surfaces, those contaminants, except as specifically provided, must be removed before takeoff. Because of the wide variations in airplane design and performance characteristics, methods for removing contamination for airplanes operated under FAR parts 121 and 135 vary greatly. Deicing of airplanes may be accomplished:

(1) By applying heated water followed by undiluted glycol-based fluid;

(2) By applying a heated water/glycol solution;

(3) By mechanically brushing the snow or ice off; or

(4) By placing the airplane in a hangar until the frost, ice, or snow melts.

Note: Currently, anti-icing (the treatment of the airplane with undiluted glycol-based fluid to prevent frost, ice, or snow from adhering to aircraft surfaces) is not commonly used in FAR part 135 operations.

b. Accidents related to icing. National Transportation Safety Board (NTSB) records reveal that 14 ground icing-related accidents and incidents involving airplanes operating under FAR part 135 occurred during the period of 1984–1992. While most of these accidents/incidents involved FAR part 135 non-scheduled cargo operations, three involved either non-scheduled or scheduled passenger carrying operations. Four of the accidents resulted in a total of seven fatalities. The NTSB identified other probable causes in some of these accidents/incidents, but in all 14 cases the NTSB identified the existence of frost, ice, or snow on the wings or other critical surfaces of the airplane as a probable cause. A common thread throughout these accidents/incidents was the pilots' apparent lack of awareness of the potential hazard from even small amounts of frost, ice, or snow on an airplane's wings and control surfaces. For instance, one pilot lost his life in an accident involving a non-scheduled cargo operation in Morrisonville, New York, on March 19, 1984. Prior to the accident, after identifying the presence of ice accumulation on the leading edges and upper wing surfaces, the pilot declined the use of a hangar to warm the airplane and instead attempted to remove the ice from the leading edges by hand. In another accident in Vienna, Missouri, on March 3, 1988, a pilot of a night cargo operation and another person lost their lives after taking off in known icing conditions. Before the flight, a line serviceman noticed ice on the aircraft's wings and suggested its removal, but the pilot declined.

5. *Definitions.* The terms used in this AC are not defined in FAR part 1, but are defined herein for better understanding of this material as follows:

a. Deicing. A procedure by which frost, ice, or snow is removed from the aircraft in order to provide clean surfaces.

b. Anti-icing. A precautionary procedure that provides protection against the formation of frost or ice and accumulation of snow on treated surfaces of the aircraft for a limited period of time.

c. Deicing/anti-icing. A combination of the two procedures above. It can be performed in one or two steps.

(1) One-step deicing/anti-icing is carried out with an anti-icing fluid. The fluid used to deice the aircraft remains on aircraft surfaces to provide limited anti-ice capability.

(2) Two-step deicing/anti-icing consists of two distinct steps. The first step (deicing) is followed by the second step (anti-icing) as a separate fluid application. Anti-icing fluid is applied to protect the relevant surfaces, thus providing maximum possible anti-ice capability (holdover time).

d. Holdover time. The estimated time the application of deicing or anti-icing fluid will prevent the formation of frost or ice and the accumulation of snow on the treated surfaces of an aircraft. Holdover time begins when the final application of deicing/anti-icing fluid commences, and it expires when the deicing/anti-icing fluid applied to the aircraft loses its effectiveness as described in the appropriate holdover timetable.

e. Pretakeoff contamination check. A pretakeoff contamination check is a check to make sure the wings and control surfaces are free of frost, ice, or snow. Section 135.227 of the FAR requires that a pretakeoff contamination check be completed within 5 minutes prior to beginning takeoff. Under FAR part 135, depending upon the type of aircraft, it may be accomplished from within or outside the aircraft and may be visual or tactile or a combination, as long as the check is adequate to ensure the absence of contamination. The certificate holder's FAA principal operations inspector (POI) must approve the pretakeoff contamination check procedures for each specific type of aircraft operated by the certificate holder. Also, the pretakeoff contamination check is referenced or described within the certificate holder's operations specifications.

6. *Overview of the FAR part 135 ground deicing rule.* The FAA and the aviation community rely almost exclusively on the PIC's judgment for ensuring the clean aircraft concept. The FAA believes that pilot education is the paramount element to combating the threat of icing. After reassessing its policy and reviewing accident statistics, the FAA still believes that pilot education is a major element in combating these types of accidents, but it must be supplemented by aircraft checks for contamination. To ensure the implementation of the clean aircraft concept, the FAR part 135 ground deicing rule requires education through additional training, and an aircraft check for contamination of the wings and control surfaces prior to beginning takeoff. All part 135 certificate holders whose aircraft expect to takeoff in ground icing conditions must complete a pretakeoff contamination check. The part 135 ground deicing rule allows an operator to develop an approved alternative method of checking the aircraft for contamination such as deice sensors. Additionally, part 135 certificate holders may choose to check the aircraft for contamination by complying with the FAR part 121 deicing rule.

7. *Applicability of the part 135 ground deicing rule. a. General.* The FAR part 135 ground deicing rule requires that a certificate holder who has a required, approved training program to incorporate deicing/anti-icing pilot training and pretakeoff contamination check procedures or an approved alternative to the pretakeoff contamination check (alternative aircraft check) into that approved training program. The procedures for a pretakeoff contamination check or the alternative aircraft check should also be in the certificate holder's operations manual and referenced in its operations specifications. The part 135 ground deicing rule does not apply to part 91 operations conducted by a part 135 operator.

b. Certificate holder who does not operate in ground icing conditions. The FAR part 135 ground deicing rule does not apply to a certificate holder who does not operate during ground icing conditions. That certificate holder is not required to train its pilots or develop pretakeoff contamination check procedures. However, that operator's aircraft cannot takeoff under a part 135 operation until ground icing conditions cannot reasonably be expected to exist.

c. FAR part 135 certificate holder who complies with the FAR part 121 ground deicing rule. If approved, a part 135 operator can comply with the FAR part 121 ground deicing rule. However, the operator must comply with the entire FAR part 121 ground deicing rule and not just with selected provisions.

d. Certificate holders who use only one pilot in their operations. Certificate holders who use only one pilot in their operations (single pilot operations) are not required to comply with the manual and approved training program requirements in FAR § 135.21, Manual requirements, and 135.341, Pilot and flight attendant crewmember training programs. Therefore, single pilot operations are not required to have an approved pilot training program nor the additional training required by the FAR part 135 ground deicing rule. However, single pilot operations must comply with all the operational requirements (i.e., pretakeoff contamination check or an approved alternative to the pretakeoff contamination check described in its operations specifications) of the FAR part 135 ground deicing rule. The pilots of these types of operators will need to demonstrate the knowledge required to operate in ground icing conditions during initial and recurrent flight checks. Thus, the information contained in this AC is also applicable to certificate holders who use only one pilot in their operations.

e. Helicopter operations. Helicopters generally do not operate in icing conditions. The FAA's review of icing-related accidents and incidents did not reveal any accident history for helicopter operations that suggest additional training or a special inspection requirement would be necessary. Therefore, helicopter operations conducted under FAR part 135 are excluded from the additional training and aircraft checking requirements of the FAR part 135 ground deicing rule. However, the "clean aircraft" concept still applies to helicopters.

8. *Miscellaneous. a. 1993 winter season.* Because of the short lead time for implementing the FAR part 135 ground deicing rule, the FAA will allow maximum flexibility in providing the required training for the 1993 winter season. Initial training can be accomplished through the issuance of bulletins, manual revisions, self-grading quizzes, or other review materials. Receipt of training documents by the operator's pilots will satisfy the training requirement for the 1993 winter season. Formal training will be accomplished in the next recurrent training cycle.

b. Associated deicing/anti-icing personnel. The ground deicing rule in FAR part 135 requires additional training for pilots only. If the certificate holder uses additional employees to accomplish deice procedures the FAA anticipate approving such procedures in circumstances in which those additional employees are also be trained in accordance with the certificate holder's training program and manual procedures.

c. Credit for previous training. (1) Part 135. The FAA recognizes that many part 135 training programs contain training on operations in ground icing conditions. A separate training section on deicing in the operator's approved training program is not necessary. Under the part 135 ground deice rule, credit for previous appropriate training given by the operator to its pilots will be granted. Certificate holders can obtain approval by showing those appropriate parts of their current part 135 training program to their POI's along with any appropriate documentation. Certificate holders who do not cover all of the topics required by the part 135 ground deice rule will need to add those topics to their approved training program.

(2) Part 121. Training completed and documented under the part 121 ground deice rule will be accepted and credited, as appropriate, toward training required under the part 135 ground deice rule. To obtain credit for training completed under the part 121 ground deice rule, the training must be appropriate including specific aircraft type and cover the elements required by the Part 135 ground deice rule.

9. *Operational requirement of the FAR part 135 ground deicing rule. a. Pretakeoff contamination check.* Except for those FAR part 135 certificate holders who voluntarily choose to comply with the FAR part 121 ground deicing rule or those that develop an approved alternative procedure, each applicable air carrier who operates under FAR part 135 must develop approved procedures for a pretakeoff contamination check of the aircraft. As previously stated, the part 135 ground deice rule does not apply to a certificate holder who does not operate in ground icing conditions. In accordance with FAR § 135.227, the certificate holder's POI must approve the pretakeoff contamination check procedures for each specific type of aircraft operated by the certificate holder. Except for single pilot operations, the procedures for a pretakeoff contamination check should be contained in the certificate holder's approved training program, operations manual, and referenced within the certificate holder's operations specifications. FAR Part 135 single pilot operations will have the pretakeoff contamination procedures described in its operations specifications.

b. Alternative procedure to the pretakeoff contamination check. The Administrator may approve a certificate holder's alternative procedure which ensures that wings and control surfaces are free of frost, ice, or snow, instead of a pretakeoff contamination check. An alternative procedure may include procedures, techniques, or equipment (such as wing icing sensors) to establish that wings and control surfaces are not contaminated. These procedures, techniques, or equipment must be approved by the Administrator and detailed in the operator's training program (if applicable), operations manual (if applicable), and referenced in its operations specifications.

c. Part 135 certificate holder who complies with the FAR part 121 ground deicing rule. The FAR part 135 ground deicing rule allows a certificate holder to comply with FAR § 121.629(c) program requirements. Guidance for development of a FAR part 121 program is contained in AC 121–XX.

10. Training requirements in certificate holder's approved training program. For certificate holders who are required to have an approved training program and who anticipates takeoffs in ground icing conditions, that training program must include pilot ground training in those subjects relating to deicing and anti-icing operations as required by FAR § 135.345 for initial, transition, and upgrade training and FAR § 135.351 for recurrent training. These training requirements must include procedures for operating airplanes during ground icing conditions. That training must include at least the following elements (a more detailed discussion of each of these elements follows):

a. Procedures for the use of holdover timetables when using deicing/anti-icing fluids.

b. Aircraft deicing/anti-icing procedures, including inspection and check procedures and responsibilities.

c. Communications procedures.

d. Airplane surface contamination

(i.e., adherence of frost snow, ice, or snow) and critical area identification, and how contamination adversely affects airplane performance and flight characteristics.

e. Types and characteristics of deicing/anti-icing fluids, if used by the certificate holder.

f. Cold weather preflight inspection procedures.

g. Techniques for recognizing contamination on the airplane.

11. *Procedures for the use of holdover timetables when using deicing/anti-icing fluids.* a. *Use of holdover timetables.* Holdover times are only an estimate of the time deicing/anti-icing fluid prevents the formation of frost or ice and the accumulation of snow on the treated surfaces of an aircraft. A holdover time begins when the final application of deicing/anti-icing fluid commences and expires when the deicing/anti-icing fluid applied to the aircraft loses its effectiveness as described in the appropriate holdover timetable. The effectiveness of deicing/anti-icing fluids are based on a number of variables; e.g., temperature, moisture content of the precipitation, wind or aircraft skin temperature. The operational use of holdover timetables is not mandatory for FAR part 135 operations unless the operator elects to comply and the FAA approves its compliance with the FAR part 121 ground deicing rule requirements. Holdover timetables provide information on the effectiveness of deicing/anti-icing fluids and should be used for departure planning and coordination purposes in conjunction with pretakeoff contamination check procedures. Operations manuals should contain detailed procedures for conducting the pretakeoff contamination check. Procedures for using holdover timetables in the operator's manual are required for those operators who are authorized to comply with the part 121 ground deice rule and are recommended for other part 135 operators who conduct takeoff operations in ground icing conditions.

b. Development of holdover timetables. Holdover timetables have been developed by the SAE and the ISO. Each certificate holder may develop their own holdover timetables for use by its personnel, but the timetables must be supported by data acceptable to the Administrator; currently, the SAE/ISO holdover timetables are considered by the FAA to be the only acceptable data for use by FAR part 121 certificate holders. This policy will also apply to FAR part 135 certificate holders. (See Appendix A, Tables 1 and 2). Further guidance regarding holdover timetables is contained in AC 20–117, Hazards Following Ground Deicing and Ground Operations in Conditions Conducive to Aircraft Icing; AC 120–58, Pilot Guide for Large Aircraft Ground Deicing; SAE ARP 4737, Aircraft Deicing/Anti-Icing Methods for Large Transport Aircraft; AC 120–XX, Pilot Guide for Small Aircraft Ground Deicing; and ISO 11076, Aerospace—Aircraft Deicing/Anti-Icing Methods with Fluids.

12. *Aircraft deicing/anti-icing procedures, including inspection and check procedures and responsibilities.* Deicing and anti-icing procedures must be specific to each aircraft type in accordance with FAR § 135.345. Those aircraft-specific procedures should include instructions and checking guidelines for use by their pilots, and if appropriate and authorized, other personnel to determine whether or not aircraft surfaces are free of contaminants. Those aircraft-specific instructions and guidelines should also be in the certificate holder's operations manual, and described their operations specifications.

a. Deicing/anti-icing procedures. Deicing/anti-icing procedures should include, as applicable to each certificate holder:

(1) Methods of deicing (e.g., warm hangar, deicing fluid).

(2) Safety requirements during fluid application.

(3) Aircraft-specific considerations.

(4) Location-specific procedures.

(5) Post deicing/anti-icing checks.

(6) Contractor Deicing. Many certificate holders will utilize contract services, such as aircraft servicing vendors, fixed base operators, or other air carriers to perform deicing/anti-icing. The certificate holder's training program should include the PIC's responsibilities for supervising a contractor who provides deicing/anti-icing services.

b. Deicing/anti-icing checking procedures and responsibilities. The certificate holder's training program must have pilot training on aircraft-specific surface contamination checking to include the following:

(1) Pilot preflight inspection/cold weather preflight inspection procedures. This is the normal walk-around preflight inspection conducted by a pilot. This inspection should be used to note any aircraft surface contamination and direct any required deicing/anti-icing operation.

(2) Pretakeoff contamination check. An aircraft check completed within 5 minutes prior to beginning takeoff to make sure the wings and control surfaces are free of contamination. Each carrier must define the content of the pretakeoff contamination check. The check may be conducted from inside or outside the aircraft, depending upon such factors as atmospheric conditions, lighting conditions, aircraft type and ability of the crew to see the relevant aircraft surfaces.

(3) Certificate holders should consider the following guidelines for obtaining approval to conduct the pretakeoff contamination checks from inside the aircraft.

(i) Can some of the surfaces be seen to adequately determine whether or not the wings and control surfaces are free of contaminants? This determination should consider the aircraft type, the method of conducting the check—that is, from the cockpit or cabin; lighting; and atmospheric conditions.

(ii) Does the certificate holder have procedures to recognize, and has the pilot been properly trained to recognize changes in weather conditions to allow the PIC to ascertain whether or not the wings and control surfaces could reasonably be expected to remain free of contaminates?

c. Alternative procedure. The Administrator may approve a certificate holder's alternative procedure, which ensures that wings and control surfaces are free of frost, ice, or snow, instead of a pretakeoff contamination check. An alternative procedure may include procedures, techniques, or equipment (such as wing icing sensors) to establish that wings and control surfaces are not contaminated. Any alternative procedure must be approved by the certificate holder's POI through the manager of the Air Transportation Division and after approval, detailed in the operator's training program (if applicable), operations manual (if applicable), and referenced in its operations specifications.

d. PIC responsibility. Operator developed guidance and procedures should contain a discussion regarding the PIC's responsibility to make the decision on whether or not to takeoff.

e. Aircraft surfaces. The aircraft surfaces, which should be clear of contaminants before takeoff, should be described in the aircraft manufacturers' maintenance manual or other manufacturer-developed documents, such as service or operations bulletins.

(1) Certificate holders should list in their approved training programs and operations manual (which are referenced in the operations specifications) for each type of aircraft used in their operations, the surfaces which should be checked on pilot-conducted preflight inspections and pretakeoff contamination checks.

(2) Generally, the following aircraft surfaces should be clear of contaminants, if the aircraft manufacturer's information is not available:

(i) Propeller, windshield, wing, empennage, stabilizing, and control surfaces.

(ii) Powerplant installation(s) including associated surfaces and systems such as engine inlets and fuel vents.

(iii) Airspeed, altimeter, rate of climb, and flight attitude instrument including associated surfaces or systems such as pitot heads, static ports, and instrument sensor pickup points.

13. *Communications.* a. The PIC should have the following information when deicing/anti-icing with fluids is accomplished:

(1) Fluid type (for example, Type I or Type II).

(2) Fluid/water mix ratio.

(3) Start time of final fluid application/beginning of holdover time.

(4) Verification that the aircraft is free of contamination.

b. ATC coordination.

c. Means for obtaining most current weather information.

14. *Airplane surface contamination.* a. Certificate holders should include training which ensures that the pilots understand the following:

(1) Freezing Precipitation. Snow, sleet, freezing rain, drizzle, or hail which adheres to aircraft surfaces.

(2) Frost, including hoarfrost, is a crystallized deposit, formed from water vapor on surfaces which are at or below 0°C (32°F).

(3) Freezing Fog. Clouds of supercooled water droplets that form a deposit of ice on objects in cold weather conditions.

(4) Snow. Precipitation in the form of small ice crystals or flakes which may accumulate on or adhere to aircraft surfaces.

(5) Freezing Rain. Water condensed from atmospheric vapor falling to earth in supercooled drops, forming ice on objects.

(6) Rain or High Humidity (on Cold-Soaked Wing). Water forming ice or frost on the wing surface when the temperature of the aircraft wing surface is at or below 0°C (32°F). Some aircraft may be susceptible to the formation of frost or ice on wing surfaces when the wing surfaces are cold-soaked and the aircraft is exposed to conditions of high humidity, rain, drizzle, or fog at ambient temperatures above freezing.

(7) Underwing Frost. Takeoff with frost under the wing in the area of the fuel tanks (caused by cold-soaked fuel) within limits established by the aircraft manufacturer, authorized by FAA aircraft certification offices, and stated in aircraft maintenance and flight manuals may be permitted.

b. Effects of frost, ice, snow, and slush on aircraft performance, stability, and control. The certificate holder should obtain this information from the manufacturer of each type of aircraft it uses in its operations and should ensure that its pilots are trained in the following effects of contamination on aircraft performance.

(1) Increased drag/weight.

(2) Tendency for rapid pitch-up during rotation or wing roll off.

(3) Loss of lift.

(4) Stall occurs at lower-than-normal angle of attack.

(5) Buffet or stall occurs before activation of stall warning.

(6) Decreased effectiveness of flight controls.

15. *Types and characteristics of deicing/anti-icing fluids.* (a) Certificate holders should refer to the following SAE publications for additional information on specific deicing and anti-icing methods and procedures and on fluid characteristics and capabilities: AMS 1424, Deicing/Anti-Icing Fluid, Aircraft, Newtonian—SAE Type I; AMS 1428, Fluid, Aircraft Deicing/Anti-Icing, Non-Newtonian, Pseudo-Plastic, SAE Type II; and ARP 4737, Aircraft Deicing/Anti-Icing Methods with Fluids, for Large Transport Aircraft; and the following ISO documents: ISO 11075, Aerospace—Aircraft de-icing/anti-icing newtonian fluids ISO type I; ISO 11076, Aerospace—Aircraft de-icing/anti-icing methods with fluids; ISO 11077, Aerospace—de-icing/anti-icing self propelled vehicles—Functional requirements; ISO 11078, Aerospace—Aircraft de-icing/anti-icing non-newtonian fluids ISO type II.

(b) If the certificate holder intends to use deicing/anti-icing fluids for ground deicing, the types and characteristics of deicing/anti-icing fluids should be included in the certificate holder's training program and operations manual. Deicing and anti-icing fluids with differing characteristics and capabilities exist; they may undergo improvements, and new types of fluids may be developed. Certificate holders should ensure that their pilots are knowledgeable about the characteristics of each type of fluid used.

Certificate holders should ensure that the following subjects are discussed, as applicable:

(1) Deicing fluids.

(i) Heated water.

(ii) Newtonian fluid (SAE/ISO Type I) (see Caution).

(iii) Mixtures of water and SAE/ISO Type I fluid.

(iv) Mixtures of water and SAE/ISO Type II fluid.

Note: Deicing fluid should be applied heated to assure maximum efficiency.

b. Anti-icing fluids:

(i) Newtonian fluid (SAE/ISO Type I) (see CAUTION).

(ii) Mixtures of water and SAE/ISO Type I fluid.

(iii) Non-Newtonian fluid (SAE/ISO Type II).

(iv) Mixtures of water and SAE/ISO Type II fluid.

Note: SAE/ISO Type II anti-icing fluid is normally applied cold on clean aircraft surfaces, but may be applied heated. Cold SAE/ISO Type II fluid normally provides longer anti-icing protection. SAE/ISO Type I anti-icing fluid should be applied heated.

c. Fluid Characteristics.

(1) Type I Fluids.

(i) Unthickened.

(ii) Limited holdover time.

(iii) Applied to form thin liquid film on wing.

(2) Type II Fluids.

(i) Thickened.

(ii) Longer holdover times in comparison to those of Type I fluids.

(iii) Application results in a thick liquid film (a gel-like consistency) on wing.

(iv) Wind flow over the wing (shear) causes the fluid to progressively flow off the wing during takeoff.

(3) Deicing/Anti-Icing Fluids Handling/Performance Implications. The type fluid used and how completely the fluid flows off the wing during takeoff determines the effects of the following handling/performance factors. The aircraft manufacturer may also provide performance information regarding the use of the different deicing/anti-icing fluids.

(i) Increased rotation speeds/increased field length.

(ii) Increased control (elevator) pressures on takeoff.

(iii) Increased stall speeds/reduced stall margins.

(iv) Lift loss at climbout/increased pitch attitude.

(v) Increased drag during acceleration/increased field length.

(vi) Increased drag during climb.

16. *Cold weather preflight inspection procedures.* a. Pilot preflight inspection/cold weather preflight inspection procedures. This is the normal walk-around preflight inspection conducted by a pilot. This inspection should be used to note any aircraft surface contamination and initiate any required deicing/anti-icing operations.

b. A thorough preflight inspection is

more important in temperature extremes because those temperature extremes may affect the aircraft or its performance. At extremely low temperatures, the urge to hurry the preflight of the aircraft is natural, particularly when the aircraft is outside and adverse weather conditions exists, which make the preflight physically uncomfortable for the pilots. This is the very time to perform the most thorough preflight inspection.

c. Aircraft areas that require special attention during a preflight during cold weather operations depend on the aircraft design and should be identified in the certificate holder's training program. The preflight should include all items recommended by the aircraft manufacturer. A preflight should include items appropriate to the specific aircraft type. Generally, those items may include:

(1) Wing leading edges, upper and lower surfaces.

(2) Vertical and horizontal stabilizing devices, leading edges, upper surfaces, lower surfaces, and side panels.

(3) Lift/drag devices such as trailing edge flaps.

(4) Spoilers and speed brakes.

(5) All control surfaces and control balance bays.

(6) Propellers.

(7) Engine inlets, particle separators, and screens.

(8) Windshields and other windows necessary for visibility.

(9) Antennas.

(10) Fuselage.

(11) Exposed instrumentation devices such as angle-of-attack vanes, pitot-static pressure probes, and static ports.

(12) Fuel tank and fuel cap vents.

(13) Cooling and auxiliary power unit (APU) air intakes, and exhausts.

(14) Landing gear.

d. Blowing Snow. If an aircraft is exposed to blowing snow, special attention should be given to openings in the aircraft where snow can enter, freeze, and obstruct normal operations. The following openings should be free of snow and ice before flight:

(1) Pitot tubes and static system sensing ports.

(2) Wheel wells.

(3) Heater intakes.

(4) Engine air intakes and carburetor intakes.

(5) Elevator and rudder controls.

(6) Fuel vents.

17. *Techniques for recognizing contamination on the airplane.* a. Certificate holders should have aircraft-specific techniques for the use of their pilots (and other personnel, if applicable) to recognize contamination on aircraft surfaces and indications of loss of effectiveness of fluids.

b. Some indications for loss of effectiveness of deicing/anti-icing fluid or contamination on aircraft surfaces include:

(1) Progressive surface freezing or snow accumulation.

(2) Random snow accumulation.

(3) Dulling of surface reflectivity (loss of gloss) caused by the gradual deterioration of the fluid to slush.

(4) Fluid characteristics and indications that the fluid is losing its effectiveness obtained from the deicing/anti-icing fluid manufacturers.

Part IX

Environmental Protection Agency

40 CFR Part 82
Protection of Stratospheric Ozone; Final Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 82

[FRL–4819–8]

Protection of Stratospheric Ozone

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This final rule establishes regulations that implement the statutory ban on nonessential products containing or manufactured with class II ozone-depleting substances under section 610(d) of the Clean Air Act, as amended. This final rule was developed by EPA in order to clarify definitions and provide exemptions, as authorized under section 610(d). The substances affected by this rulemaking are certain products made with hydrochlorofluorocarbons (HCFCs). This action will facilitate implementation of the ban, with a statutory effective date of January 1, 1994, and provide guidance and exceptions to the ban that are authorized by the statute.

EFFECTIVE DATE: This final rule is effective January 1, 1994. For additional information concerning the effective date see section VI in Supplementary Information.

ADDRESSES: Comments and materials supporting this rulemaking are contained in Public Docket No. A–93–20, in room M–1500, Waterside Mall (Ground Floor), Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460. Dockets may be inspected from 8:30 a.m. until 12 noon, and from 1:30 p.m. until 3 p.m., Monday through Friday. A reasonable fee may be charged for copying docket materials.

FOR FURTHER INFORMATION CONTACT: Cynthia Newberg, Program Implementation Branch, Stratospheric Protection Division, Office of Atmospheric Programs, Office of Air and Radiation (6205–J), 401 M Street, SW., Washington, DC 20460. (202) 233–9729. The Stratospheric Ozone Information Hotline at 1–800–296–1996 can also be contacted for further information.

SUPPLEMENTARY INFORMATION: The contents of today's preamble are listed in the following outline:

I. Background
II. Notice of Proposed Rulemaking
A. Medical Products
B. Aerosol Products and Pressurized Dispensers Containing Class II Substances
1. Definition of Aerosol Products and Pressurized Dispensers
2. Proposed Exemptions
C. Foam Products Containing or Manufactured with Class II Substances
1. Insulating Foam Products
2. Foam Used to Meet Federal Motor Vehicle Safety Standards
D. Temporary Exemptions
E. Ban On Sale and Distribution in Interstate Commerce

2. Products Requiring Federal Approvals
D. Interstate Commerce
E. Verification and Public Notice Requirements for Cleaning Fluids for Non-Commercial Electronic and Photographic Equipment
V. Summary of Changes From Proposal
VI. Effective Dates
VII. Summary of Supporting Analyses
A. Executive Order 12866
B. Regulatory Flexibility Act
C. Paperwork Reduction Act
VIII. Judicial Review
IX. References

I. Background

The Class II Nonessential Products Ban proposal, published on September 27, 1993 (58 FR 50464), contains a detailed background of the issues relating to the proposed ban. That background section includes information on the ozone depletion problem, the 1978 aerosol ban, the Montreal Protocol, the excise tax on certain ozone-depleting substances, the Clean Air Act as amended in 1990 (the Act), the proposed accelerated phaseout of ozone-depleting substances, and the labeling rule. Rather than repeat this background discussion, EPA refers readers of this final rule to 58 FR 50464 for such background.

II. Notice of Proposed Rulemaking

On September 27, 1993, EPA published a notice of proposed rulemaking (NPRM) (58 FR 50463) addressing issues related to the statutory prohibition against the sale or distribution, or offer for sale or distribution in interstate commerce of nonessential products containing or manufactured with a class II substance, imposed by section 610(d) of the Act.

During the development of that NPRM, EPA met with representatives from various industries and environmental organizations. The Agency also conducted two advisory meetings held in the EPA auditorium, on February 19, 1993, and March 29, 1993, in order to allow the public to review draft background documents on products containing or manufactured with class II substances and to offer comments and technical expertise on the development of the NPRM. Minutes of these meetings and copies of the background documents are contained in Docket A–93–20. The Agency used these forums as appropriate venues for hearing the concerns of various stakeholders potentially affected by the class II ban.

Title VI of the Act divides ozone-depleting chemicals into two distinct classes. Class I is comprised of chlorofluorocarbons (CFCs), halons, carbon tetrachloride and methyl chloroform, Methyl Bromide and hydrobromofluorocarbons. Class II is comprised of hydrochlorofluorocarbons (HCFCs). (See listing notice January 22, 1991; 56 FR 2420.) Section 610(b) of the Act, as amended, requires EPA to promulgate regulations banning nonessential products releasing class I substances. EPA published its final rule for the Class I Nonessential Products Ban on January 15, 1993 (58 FR 4768).

In the September 27 NPRM, EPA proposed regulations to implement the statutory prohibition imposed by section 610(d) on the sale or distribution in interstate commerce of specified class II products. Since many aspects of the proposed regulations were similar in structure to the section 610(b) final rule banning class I substances published on January 15, 1993, EPA proposed to revise the regulations promulgated under 40 CFR part 82 subpart C to incorporate the class II ban.

Section 610(d)(1) states that after January 1, 1994, "it shall be unlawful for any person to sell or distribute, or offer for sale or distribution, in interstate commerce—(A) any aerosol product or other pressurized dispenser which contains a class II substance; or (B) any plastic foam product which contains, or is manufactured with, a class II substance." Section 610(d)(2) authorizes EPA to grant certain exceptions and section 610(d)(3) creates exclusions from the class II ban in certain circumstances.

Section 610(d)(2) authorizes the Administrator to grant exceptions from the class II ban for aerosols and other pressurized dispensers where "the use of the aerosol product or pressurized dispenser is determined by the Administrator to be essential as a result of flammability or worker safety concerns," and where "the only available alternative to use of a class II substance is use of a class I substance which legally could be substituted for such class II substance."

Section 610(d)(3) states that the ban of class II substances in plastic foam products shall not apply to "foam insulation products" or "an integral skin, rigid, or semi-rigid foam utilized to provide for motor vehicle safety in accordance with Federal Motor Vehicle Safety Standards where no adequate substitute substance (other than a class I or class II substance) is practicable for effectively meeting such standards."

EPA believes that, unlike the class I ban, the class II ban is self-executing.[1] Section 610(d) bans the sale of the specified class II products by its own terms, without any reference to required EPA regulations. Consequently, EPA concluded that it was not required to promulgate regulations within one year of enactment under section 610(a) to implement the class II ban. EPA believes that the statutory text clearly establishes this obligation only with respect to regulations under section 610(b) to implement the class I ban.[2] EPA issued proposed regulations and is today issuing final regulations implementing the class II ban in order to better define the products banned under section 610(d) and to grant authorized exceptions under section 610(d)(2). Section 301(a) of the Act gives EPA the authority to promulgate such regulations as are necessary to carry out its functions under the Act. EPA believes that it is necessary within the meaning of section 301 to promulgate regulations more clearly defining the products subject to the class II ban and granting exceptions to the ban under section 610(d)(2). The following sections discuss the NPRM in more detail.

A. Medical Products

Section 610(e) states that "nothing in this section shall apply to any medical devices as defined in section 601(8)." Section 601(8) defines "medical device" as "any device (as defined in the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321)), diagnostic product, drug (as defined in the Federal Food, Drug, and Cosmetic Act), and drug delivery system—(A) if such device, product, drug, or drug delivery system utilizes a class I or class II substance for which no safe and effective alternative has been developed, and where necessary, approved by the Commissioner of the Food and Drug Administration; and (B) if such device, product, drug, or drug delivery system, has, after notice and opportunity for public comment, been approved and determined to be essential by the Commissioner in consultation with the Administrator."

EPA proposed exempting medical devices that the FDA considers essential by exempting all devices listed under 21 CFR section 2.125(e).

B. Aerosol Products and Pressurized Dispensers Containing Class II Substances

1. Definition of Aerosol Products and Pressurized Dispensers

Section 610(d) bans the sale of all aerosol products and pressurized dispensers containing class II substances not specifically excepted by the EPA under section 610(d)(2). Consistent with the class I ban, EPA proposed that the phrase "aerosol product or other pressurized dispenser" should not be interpreted as applying to pressurized containers ("bulk containers") used to distribute materials for use into other products because these materials generally are self-pressurized when so contained.[3]

The final rulemaking for the Class I Nonessential Products Ban clarified EPA's interpretation of this language (58 FR 4790). EPA believes that the phrase "aerosol product or other pressurized dispenser" was meant to include non-aerosol products such as CFC–12 dusters and freeze sprays. However, the Agency does not believe that the term "other pressurized dispenser" applies to pressurized containment vessels such as small containers of motor vehicle refrigerant or containment vessels for recycled, recovered, or reclaimed refrigerant. Under EPA's interpretation, the phrase "aerosol products or pressurized dispenser" does not include bulk pressurized containers which are used solely for the transportation or storage of controlled substances to be later integrated into a use system. As described in 40 CFR 82.3(i) and the December 10, 1993 final rule implementing section 606 and related provisions of sections 603, 607, and 616 of the Act (58 FR 65018), a "controlled substance means any substance listed in appendix A of appendix B to [subpart A] whether existing alone or in a mixture, but excluding any such substance or mixture that is in a manufactured product other than a container used for the transportation or storage of the substance or mixture" (58 FR 65063). A bulk container, also described in 40 CFR 82.3(i), means a container in which "a listed substance or mixture must first be transferred from [and transferred] to another container, vessel, or piece of equipment in order to

[1] The Congressional Record statement by Representative Ralph Hall (D-Texas) regarding the Congressional intent of the legislation as passed states "any failure of the Administrator to promulgate regulations as required by this title, or any court order delaying the effective date of such regulations, shall not alter the effective dates of the statutory requirements and prohibitions that are set forth in this title" (October 26, 1990, 136 Congressional Record H12907). Thus, EPA clearly stated in the NPRM that the Agency has no authority to alter the effective date of the statutory ban.

[2] Although the legislative history of section 610 is unclear on this point, the Senate Statement of Managers specifically states that the section 608 ban on the venting of refrigerants, which like the class II ban is an outright prohibition, is self-executing and will take effect on the stated date even if that date is in advance of EPA regulations implementing the ban. EPA believes that this analysis applies similarly to the class II ban. See 136 Congressional Record S16948, October 27, 1990.

[3] As explained in the class I ban, such an interpretation would have had a devastating and unintended impact on the air-conditioning and refrigeration industry

realize [the controlled substance's] intended use" (58 FR 65063). EPA distinguishes between manufactured products and bulk containers, where manufactured products are subject to the ban and bulk containers are not.

2. Proposed Exemptions

The products that EPA proposed to exempt are actually product categories rather than particular products manufactured and marketed by individual companies, relying upon the definition of "product" developed in the Class I Nonessential Products Ban rulemaking. EPA reiterated its belief that in section 610 of the statute, Congress applied this term to any type or category of merchandise or commodity offered for sale, as well as any use of an ozone-depleting substance in the manufacture or packaging of any such merchandise or commodity. Consequently, when granting exceptions today, EPA is taking action with regard to entire product categories rather than individual products in this rulemaking. (EPA recognized that in the case of certain niche markets, there may be only one individual product that falls within a particular category; in such a case, EPA could consider an exception for that specific product.)

EPA carefully considered requests for exceptions and exemptions received prior to the publication of the NPRM in order to determine which foam or aerosol products may meet the criteria for exceptions and exemptions set out in the statute. EPA stated in the NPRM that there was legal authority to consider exempting any of the eleven products that received class I exemptions, as well as any product that was using an HCFC to replace methyl chloroform, carbon tetrachloride or halons. EPA put forth a list of proposed exemptions, asked for additional information concerning several products for which the Agency could not adequately determine if an exemption was authorized and discussed several possible revisions to the class I ban that would result in creating the potential for additional exemptions.

EPA proposed to exempt the following aerosol products:

- Medical devices listed in 21 CFR 2.125(e);
- Lubricants, coatings or cleaning fluids for electrical or electronic equipment, which contain class II substances for solvent purposes, but which contain no other class II substances;
- Lubricants, coatings or cleaning fluids used for aircraft maintenance, which contain class II substances for solvent purposes but which contain no other class II substances;
- Mold release agents used in the production of plastic and elastomeric materials, which contain class II substances for solvent purposes but which contain no other class II substances; and
- Spinnerette lubricants/cleaning sprays used in the production of synthetic fibers, which contain class II substances for solvent purposes but which contain no other class II substances.

Based on the restriction regarding the sale and distribution of certain cleaning fluids containing class I substances to commercial purchasers, EPA also proposed exempting sales or distribution to commercial purchasers of any aerosol or pressurized dispenser cleaning fluid for electronic and photographic equipment which contains a class II substance.

EPA requested additional comment to determine if exemptions were warranted based on worker safety or flammability concerns regarding the use of a substitute for class II substances in the products listed below, as well as comment on current and potential uses of class II substances in the following products:

- Lubricants for pharmaceutical and tablet manufacture;
- Gauze bandage adhesives and adhesive removers;
- Topical anesthetic and vapocoolant products;
- Plasma etching;
- Solvent uses in document preservation sprays;
- Solvent uses in red pepper bear repellent sprays.

In order to grant an exception to the class II ban, the only available alternative to the use of the class II substance must be a legal use of a class I substance and the Agency must determine that the aerosol product or pressurized dispenser is essential as a result of flammability or worker safety concerns. Consequently, EPA was generally limited to considering products that were exempted under the class I ban or products that use HCFCs as substitutes for methyl chloroform, carbon tetrachloride or halons. EPA discussed in the NPRM that the class II exemptions are integrally linked to the Class I Nonessential Products Ban. EPA believes that the class I ban and the Act gave ample notice to the public through the class I rulemaking process that future exemptions from the class II ban would not be available. The NPRM notes, however, that there are a number of products that do not use class I substances, but do use class II substances. Some of the manufacturers of these products may not have commented on the need for a class I exemption, because they were not aware of the connection between the two bans (e.g. that class II exemptions could only be obtained where class I use was legal). As stated above, without a legal class I use, the Agency does not have authority under section 610(d) to grant exemptions under the class II ban. EPA proposed considering the need to revise the class I ban to provide exemptions for several products brought to the Agency's attention prior to the issuance of the NPRM. For the most part, these were products that no longer used class I substances and therefore did not submit comments to EPA during that rulemaking. Therefore, since these products were not sufficiently considered in the earlier rulemaking, these products could not meet the statutory requirement regarding the only legal substitute being the use of a class I substance. The Agency requested comment on the need to revisit the Class I Nonessential Products Ban through this rulemaking with respect to any product for which there is no substitute for the class II use other than the use of a class I substance, where that use would no longer be legal. EPA specifically discussed two products:

- pesticides used in aircraft; and
- antispatter products used by welders.

In addition, EPA discussed the possibility of considering other factors not specified in the Act, such as economic feasibility or availability of the alternatives. EPA stated, however, that it did not believe it had such authority, but requested comment regarding the economic feasibility and availability of alternatives relative to dusters and safety sprays and whether EPA could consider these factors.

Finally, the Agency discussed granting exemptions based on the legal use of methyl chloroform, carbon tetrachloride and halons. The NPRM specifically mentioned two products. The first product was a pesticide, used to kill wasps and hornets nesting near high-voltage power lines, that may require an exception based on the solvent use of HCFC–141b in a new formulation, replacing the current formulation that uses methyl chloroform. The second product described in the NPRM is a parts cleaner for hydraulic and electronic parts in aircraft, automotive and marine maintenance. EPA requested comment on worker safety or flammability concerns regarding the manufacturing and use of these products, as well as comment on current and potential uses of class II substances in both products. In addition, EPA requested comment on whether the only available alternative to the use of a class II substance in the wasp and hornet pesticide and the hydraulic parts cleaner is the use of a class I substance.

EPA was unaware of any other products for which manufacturers, distributors or retailers are substituting or planning to substitute class II substances, where the only legal substitute for the class II substance is the use of a class I substance; however, EPA requested comment on the need to grant additional exceptions based on worker safety or flammability concerns for products containing or manufactured with class II substances where the only alternative is the legal use of a class I substance.

C. Foam Products Containing Or Manufactured With Class II Substances

Section 610(d) prohibits the sale, distribution, or offer of sale or distribution in interstate commerce of all plastic foam products which contain, or are manufactured with, class II substances, and which are not specifically excluded from the ban under section 610(d)(3), as of January 1, 1994. Certain types of plastic foam products, specifically foam insulation products and integral skin, rigid, or semi-rigid foams necessary to meet the Federal Motor Vehicle Safety Standards, are excluded from the ban by the statute. However, in this rulemaking, EPA has determined which plastic foam products qualify as "foam insulation products," and whether adequate substitutes for certain HCFC-blown foams are practicable for effectively meeting the Federal Motor Vehicle Safety Standards.

The NPRM states that for the purposes of this rulemaking, EPA interprets the term "plastic foam product" to mean any product (as defined in 40 CFR 82.62) composed in whole or in part of material that can be described as "foam plastic" or "plastic foam." EPA interprets "foam plastic" or "plastic foam" to mean a type of plastic such as polyurethane or polystyrene which has been produced using blowing agents to create bubbles or "cells" in the material's structure.

The foam plastics manufacturing industries, the markets their products serve, and their uses of CFCs and HCFCs are extremely varied. CFC–11, CFC–12, CFC–113, CFC–114, HCFC–22, HCFC–141b, and HCFC–142b have all been used to some extent as blowing agents in the manufacture of plastic foam products, which include building and appliance insulation, cushioning foams, packaging materials, flotation devices and shoe soles.

1. Insulating Foam Products

There are two basic types of foam produced with halocarbons: thermosetting foams and thermoplastic foams. In the production of thermosetting foams, a blowing agent is mixed with chemicals which react to form the plastic foam product. With thermoplastic foams, the blowing agent is injected into a molten plastic resin which hardens upon cooling.

The NPRM discusses an important distinction between foam plastics where the cells are closed, trapping the blowing agent inside, and those with open cells which release the blowing agent during the manufacturing process. The gas trapped in closed cell foams can, if it possesses a low thermal conductivity, provide significant thermal insulation. All of the foam products used as thermal insulation are closed cell foams. Open cell foams are not good thermal insulators.

CFCs had been commonly used as blowing agents in the manufacturing process of many foam products because they have suitable boiling points and vapor pressures, low toxicity, very low thermal conductivity, are non-flammable, non-reactive, and, until the imposition of the excise tax on ozone-depleting substances, they had been very cost-effective. Among the many commonly used substitutes for CFCs in foam production are HCFCs, CO_2, hydrocarbons and methylene chloride. In addition, HFCs and fluorinated ethers may offer long-term substitutes for plastic foam production.

Section 610(d)(3) states that the ban on plastic foam products containing or manufactured with HCFCs shall not apply to "foam insulation products." EPA identified two possible interpretations of this phrase. "Foam insulation products" could be interpreted to mean products containing foam that are used for insulating some object. This phrase could also mean products containing "insulating foam."

In addition, the NPRM considered different possible interpretations of the word "insulation." The largest use of plastic foams produced with CFCs and HCFCs is in products that provide thermal insulation for buildings, equipment, and a host of different objects, but comments received during the development of the NPRM suggested that the word "insulation" could also conceivably refer to a product or material that protects or "insulates" some object from other phenomena, such as noise, shock, or electromagnetic radiation. Several commenters have suggested to EPA that the word "insulation" should be interpreted to mean a product or material that protects some object from physical impacts or vibration. EPA examined each of these options in preparing the proposed rulemaking.

The NPRM states that EPA believes that the word "insulation" should be interpreted to mean thermal insulation exclusively. The primary uses of plastic foam products consist of thermal insulation, cushioning, and packaging applications.

Because the statutory language is ambiguous, EPA has the authority to reach a reasonable interpretation in developing a definition of foam insulation. (See *Chevron* v. *NRDC*, 467 U.S. 837 (1984)). Reviewing the provisions of section 610 as a whole, EPA proposed that the exemption in section 610(d)(3)(A) should apply only to thermal insulation products. In section 610(d)(3), Congress provided two statutory exemptions, one for foam insulation and one for certain types of motor vehicle safety foam under specified circumstances. Under a broad interpretation of foam insulation including all insulating uses, such as physical shock or impact insulation, motor vehicle safety foams would be included in the definition of foam insulation, since motor vehicle safety foams serve to insulate vehicle occupants from crash impact. Therefore, the second exemption provided by Congress would be entirely unnecessary if the first exemption were broad enough to include the products covered by the second exemption. Furthermore, it would not be necessary for Congress to limit motor vehicle safety foams to specific circumstances where substitutes were unavailable. A broad interpretation of the definition of foam insulation would exempt motor vehicle safety foams from the class II ban even where substitutes were easily available, contrary to the explicit provisions of the second exemption. EPA concluded that since a broad interpretation of insulating foam would render the second exemption superfluous, the better reading of the statute would limit the first exemption to thermal insulation foams. See the NPRM for a full discussion of this issue (58 FR 50481).

For the purposes of this rule, EPA proposed defining "foam insulation product" as any product containing the following materials:

(1) Closed cell rigid polyurethane foam,

(2) Closed cell rigid polystyrene boardstock foam, and

(3) Closed cell rigid phenolic foam.

VOL 58 ISS 249 DEC 30 1993 UMI

In addition, EPA proposed to define pipe insulation (also referred to as "pipe wrap") made out of closed cell rigid polyethylene foam as a foam insulation product. As explained in the NPRM, EPA concluded that all of these products were thermal foam insulation products and that no other products were thermal foam insulation products (58 FR 50481).

2. Foam Used To Meet Federal Motor Vehicle Safety Standards

Section 610(d)(3) states that the ban on class II substances in plastic foam products shall not apply to any "foam insulation product" or "an integral skin, rigid, or semi-rigid foam utilized to provide for motor vehicle safety in accordance with Federal Motor Vehicle Safety Standards where no adequate substitute substance (other than a class I or class II substance) is practicable for effectively meeting such Standards."

Section 103 of the National Traffic and Motor Vehicle Safety Act of 1966 authorized the National Highway Traffic Safety Administration (NHTSA) to promulgate Federal Motor Vehicle Safety Standards, which have subsequently been published in 49 CFR part 571. The Federal Motor Vehicle Safety Standards are, for the most part, performance standards. The use of particular materials is generally not specified in the standards in 49 CFR part 571 affected by this rulemaking. Consequently, to the best of the EPA's knowledge, no HCFC-blown foams are specifically required by the NHTSA regulations. However, since the enactment of the laws requiring these standards beginning in the late 1960s, the motor vehicle manufacturing industry has relied almost exclusively on foams to meet the part 571 impact protection standards (the only exception EPA is aware of consists of leather-wrapped steering wheels and leather-covered dash boards, and the Agency understands that even these products have foam underneath).

After conducting its own research and consulting with officials at the NHTSA and industry sources, EPA proposed applying the statutory ban on the sale, distribution, or offer of sale or distribution in interstate commerce to all foam components used in motor vehicles except those made out of integral skin foam and those which qualify as foam insulation products as defined in § 82.62(h) effective January 1, 1994. Based on the Agency's understanding of when substitutes to HCFC use in integral skin foam used to meet Federal Motor Vehicle Safety Standards would be available, EPA proposed exempting integral skin foam made with HCFCs used to meet Federal Motor Vehicle Safety Standards under the provisions of section 610(d)(3)(B) from the class II ban on plastic foam products only until January 1, 1996. At that time, the exemption for HCFC-blown integral skin foam will "sunset." In addition, EPA proposed to permanently exempt from the class II ban existing inventories of integral skin products needed to meet the Federal Motor Vehicle Safety Standards manufactured prior to January 1, 1996.

EPA indicated that the Agency will revisit the sunset provision for this exemption at a future date if the Agency receives a request from the public for extending the exemption based on the unavailability of substitutes.

D. Temporary Exemptions

EPA proposed certain limited exemptions from the statutory ban on class II substances. Administrative creation of exemptions from statutory requirements are authorized only in limited circumstances, outlined in *Alabama Power Co., et al.* v. *Costle, et al.*, 636 F. 2d 323 (D.C. Cir 1979). Agencies can create such exemptions only where necessary based on administrative feasibility or the de minimis nature of the exemption. EPA proposed providing a "grandfather" exemption for existing inventories, based on the de minimis rationale, as well as a temporary exemption for products requiring federal approval for reformulation, based on administrative feasibility.

EPA proposed exempting existing inventories of products otherwise subject to the class II ban based on the de minimis environmental impact of such an exemption. Many of the products covered by the class II ban, particularly many of the foam products, release class II substances either during manufacture or disposal, rather than during use. Thus, banning the sale of existing inventories of such products would have a de minimis environmental impact. While there are also cases where the class II substance is released in the use of the product, especially with the aerosol products, EPA stated its conclusion in the NPRM that emissions to the environment from these products, once manufactured, will be little or no different from the releases from these products if removed from commerce and subsequently disposed of.

The proposed exemption would cover all products placed into initial inventory by December 27, 1993, the date ninety days after publication of the NPRM. EPA believes that this is adequate time for manufacturers to alter manufacturing processes to exclude class II substances. Under the proposal, to continue selling products after January 1, 1994, the manufacturer or distributor must be able to show, upon request by EPA, that the product was in fact manufactured, and thus placed into initial inventory by December 27, 1993. Shipping forms, lot numbers, manufacturer date stamps or codes, invoices, or the like, may be used to identify the date the product was placed into initial inventory. EPA believes these types of records are normally kept by manufacturers and distributors of products affected by this rulemaking and that no additional recordkeeping will be required by this rule.

In addition, EPA proposed exempting from the class II ban those products requiring federal approval prior to reformulation, provided that manufacturers of such products have made a request of the appropriate federal agency for such federal approval prior to January 1, 1994. *Alabama Power* authorizes creation of administrative exemptions where necessary, based on administrative feasibility.

EPA proposed allowing manufacturers that require federal approval for reformulations of a product or approval of a specific substitute product to continue to sell or distribute, or offer for sale or distribution in interstate commerce, their existing formulations until ninety days after receiving all appropriate federal agency approvals, providing the request for approval from the appropriate federal agency had been submitted by January 1, 1994. EPA proposed allowing manufacturers that are ultimately denied federal approval for reformulations of a product or approval of a specific substitute product to continue to sell or distribute, or offer for sale or distribution in interstate commerce, their existing formulations until thirty days after receiving notice of denial from the federal agency. EPA felt this shorter period was appropriate since in this case, manufacturers need merely cease using class II substances rather than altering manufacturing processes to accommodate the new formulation or substitute. Consistent with the temporary exemption for products placed in initial inventory prior to December 27, 1993, products put into initial inventory by the manufacturer, before thirty days after receipt of denial or ninety days after receiving an approval by the appropriate federal agency, would be grandfathered. To continue selling after January 1, 1994, the manufacturer or distributor would be required to show, upon request, that the pertinent federal approvals were applied for prior to January 1, 1994 and that the product was in fact manufactured by ninety days following the receipt of all appropriate federal approvals or thirty days following denial.

E. Ban on Sale or Distribution in Interstate Commerce

EPA proposed that the term "interstate commerce" in section 610(d) refer to the product's entire distribution chain up to and including the point of sale to the ultimate consumer. Under section 610, the statute prohibits all sale, distribution, or offer of sale or distribution in interstate commerce after the January 1, 1994 effective date. As such, all sales and distribution of banned products, including retail sales, would be prohibited as of January 1, 1994, as required by the Act, unless otherwise specified.

F. Scope of Interstate Commerce

EPA's interpretation of interstate commerce does not cover the sale, distribution, or offer of sale or distribution, of nonessential products within the boundaries of a single state. Thus, EPA believes that the Act does not ban the sale, distribution, or offer of sale or distribution of a product otherwise affected by this rulemaking that is completely manufactured, distributed, and sold without ever crossing state lines. However, the Agency stated in the NPRM that to avoid coverage by this proposed rulemaking, an affected party must provide adequate documentation that not only was the product manufactured, distributed, and/or sold exclusively within a particular state, but also that all of the raw materials, components, equipment, and labor that went into manufacturing, distributing, selling, and/or offering to sell or distribute such a product originated within that state as well. The sale of the affected product includes every sale up to and including the sale to the ultimate consumer, and all these sales must take place without ever crossing a state line for the product to be considered not part of interstate commerce.

G. Resale of Used Products

EPA proposed an interpretation of sale, distribution, or offer of sale or distribution in interstate commerce which does not cover the resale of used products. Resale of used products means a sale, by a person after a period of use other than demonstration use. The Agency recognizes that more than one consumer often derives utility from owning and using certain durable goods affected by this rulemaking, such as automobiles and boats. Restricting the resale of such used durable goods would provide little, if any, environmental benefit. Because restricting the resale of such used durable goods would impose significant economic hardship on a great many consumers without providing any associated environmental benefits, EPA does not believe that Congress intended to ban their resale. Consequently, while EPA's interpretation of "interstate commerce" is such that interstate commerce includes the entire chain of sale and distribution from the manufacturer of a new product to its ultimate consumer, the Agency recognized in the NPRM that in the case of durable consumer goods such as boats and motor vehicles, resale of the product to additional consumers may occur after the original sale of the new product to the ultimate consumer after some period of use by the original ultimate consumer. In such cases, EPA proposed to not consider the resale of these banned products to constitute sale, distribution, or offer of sale or distribution, of a new product in interstate commerce for the purposes of this rulemaking.

H. Imports and Exports

The NPRM states that EPA believes that both the import of any product for sale or distribution within the United States, or the sale or distribution of any product intended for ultimate export from the United States, are acts of interstate commerce within the meaning of section 610 and would, accordingly, be affected by this regulation. The import or export of products affected by today's rulemaking would be subject to the same restrictions as the sale, distribution, or offer of sale or distribution of these products in the United States. EPA did not by these provisions intend to extend its authority to regulate foreign commerce. The class II ban applies only to interstate commerce and EPA intended in the NPRM to regulate imports and exports only while they were in interstate commerce. EPA did not intend to regulate the foreign commerce aspects of imports and exports. EPA intended only that the manufacture of products for ultimate export and the distribution of imported products be subject to these rules to the extent they fell within interstate commerce as defined in section II.F., above.

I. The Use of Affected Products Purchased Before the Effective Date of the Ban

The NPRM discusses EPA's confirmation in the final class I ban rulemaking that nonessential products purchased before the effective date of the ban may still be used, and that the Agency is not regulating the use of nonessential products, merely their sale and distribution as authorized by the statutory language (58 FR 4782). Consistent with that rulemaking, the class II ban proposal states that EPA is not regulating the use of affected products, only the sale and distribution of affected products in interstate commerce.

J. Verification and Public Notice Requirements for Cleaning Fluids for Non-Commercial Electronic and Photographic Equipment

Section 610(b)(2) required EPA to ban the sale of chlorofluorocarbon-containing cleaning fluids for electronic and photographic equipment to non-commercial users. EPA estimates that non-commercial sales of such fluids represent a small fraction of the total use of these products. Nevertheless, the statute specifically required EPA to ban the sale of these products containing CFCs for non-commercial use. Consequently, EPA proposed, and the final rule included, a ban on the sale, distribution, or offer of sale or distribution of these products to non-commercial users. As a result of this statutory mandate, there is no remaining chlorofluorocarbon which legally could be substituted for class II substances in non-commercial cleaning fluids for electronic and photographic equipment.

EPA stated in the class II ban NPRM that aerosol cleaning fluids for electronic and photographic equipment sold to commercial users are often used at work benches in industrial situations. Flammability is a concern in such environments. In addition, these cleaning fluids may be used on electronic or electrical equipment that must be serviced while electrical current is turned on. Therefore, the Agency believes flammability is a concern associated with the use of aerosol cleaning fluids for electronic and photographic equipment. Accordingly, EPA proposed providing an exemption for the sale of aerosol cleaning fluids for electronic and photographic equipment containing class II substances to commercial users.

In the class I ban, EPA required sellers and distributors to post signs stating that sale, distribution, or offer of sale or distribution, in interstate commerce of these products to non-commercial users is prohibited and that purchasers of these products must provide verification that they are commercial users. In addition, sellers and distributors were required to verify that purchasers of

VOL 58 ISS 249 DEC 30 1993 UMI

these products are commercial users. Purchasers could fulfill this requirement by presenting any number of existing documents generally issued to commercial entities as a condition for conducting business. Sellers and distributors would have to have a reasonable basis for believing that the information presented by the purchaser is accurate and thus that the purchaser is in fact a commercial user. These documents could include a federal employer identification number, a state tax exemption number, a local business license number and a government contract number. EPA believes that these requirements impose the least burden while still meeting the statutory requirement to prevent non-commercial users from purchasing CFC-containing cleaning fluids.

EPA stated in the NPRM that the statutory language in section 610(d) compels the Agency to adopt similar verification provisions with regard to cleaning fluids containing class II substances. Consequently, the Agency proposed verification and public notice requirements similar to those in the class I ban final rule. Included in the proposal was an option allowing the sellers and distributors to use one sign to provide the proper notification.

III. Summary of Major Public Comments

A public hearing on the proposed rule was held on October 12, 1993. Nine groups presented oral comments on the NPRM. A transcript of the hearing is contained in Docket A–93–20.

EPA received a total of 91 written comments on the proposed rule during the forty-five day public comment period, and these comments are also contained in Docket A–20–93. Many commenters expressed support for EPA's definition of "insulating products" while a few commenters suggested EPA modify the definition. Many comments requested that EPA re-examine the use of HCFC–22 in aerosols, specifically in mold release agents, document preservation sprays and spinnerette lubricant/cleaning sprays. A number of commenters requested that EPA consider providing an exemption for the solvent and propellant uses of class II substances in document preservation sprays. Several commenters put forth requests to exempt class II substances in certain circumstances based on worker safety and flammability concerns, where the only legal alternatives are halons. Finally, a few commenters discussed the benefits of EPA's proposed grandfathering provisions.

IV. Response to Comments

EPA received several comments indicating that there were errors in the published version of the regulatory text. EPA has reviewed and updated that text.

A. Aerosol Products and Pressurized Dispensers

EPA received one comment indicating that the Agency should clarify the definition of "other pressurized dispenser." The commenter was particularly concerned with how the Agency would treat a container used solely to transport class II substances. In the class I ban final rules and in the class II ban NPRM, EPA discussed bulk containers used to transport class I and class II substances, including small containers of CFC–12 used in the automotive industry. EPA would like to clarify that these are bulk containers, used solely to transport the controlled substance, and are not considered to be pressurized dispensers for the purposes of section 610.

Product which may contain only a class I or class II substance or mixture of class I and class II substances and other substances, are subject to the bans promulgated under section 610. Products are different from bulk containers in that to perform its function, products are directly applied from the container in which they are sold. Furthermore, products to be added into a system, such as an air conditioner, that contain a class I or class II substance, but that do not function as part of the use system (e.g. some function other than cooling in an air-conditioner) are considered products, not bulk containers. One example of this is a leak repair product that is transferred into an air-conditioning system under pressure provided by a refrigerant. The primary function of the product is to repair a leak rather than to charge the system with refrigerant. Another example is a duster, whose inherent function is to remove dust through forced air. The controlled substance is used as pressure to force the air from the container. A bulk refrigerant, on the other hand, is transferred under its own pressure and provides refrigerant qualities to the system to which it is transferred. Furthermore, in the final regulations implementing section 606, published on December 10, 1993, EPA clearly delineates between manufactured products and bulk containers used to transport substances.

EPA received one comment from a manufacturer that employs an alternative technology in the production of various aerosol products and pressurized dispensers. This commenter stated that a patent-pending process is available that allows the manufacturing of formulations without ozone-depleting substances. The commenter indicated that this technology is being widely used and considered in many fields and provides a safe nonflammable alternative to class I and class II substances. EPA applauds the efforts of this commenter to develop a technology that does not contribute to stratospheric ozone depletion. As the phaseout dates for class I and class II substances approaches EPA is pleased to learn that alternatives will be available. However, the commenter did not provide enough information to allow EPA to judge where this new technology can effectively replace the need for EPA to provide specific exceptions or exemptions to the statutory ban. Therefore, EPA cannot consider this technology as an alternative sufficient to allow the Agency to alter any of the exemptions in this final rulemaking.

EPA received comments concerning the relationship between the class I and class II bans and the Significant New Alternatives Program (SNAP) being promulgated under section 612 of the Act. The SNAP final rule will provide industries with lists of "acceptable" and "unacceptable" alternatives for use as substitutes for ozone-depleting substances. In addition, the use of acceptable alternatives may be subject to other restrictions promulgated under Title VI, as well as other federal, state, and local requirements.

EPA received several comments describing the positive and negative aspects of various alternatives that could be used or considered in different applications. Many commenters described factors that should be considered where a given alternative is considered. EPA has reviewed this information.

1. Products Using Class II Substances As Replacements For Class I Substances That Include Methyl Chloroform, Carbon Tetrachloride or Halons

EPA has authority to consider granting exceptions for products containing one or more class II substances, where the only available alternative for the class II substance(s) is legally available class I substances and the use of the class II substance is essential based on flammability or worker safety concerns. This section discusses cases where the only alternative within class I may be methyl chloroform, carbon tetrachloride or halons. Although EPA was not aware of any situations justifying these exemptions, EPA indicated in the NPRM that a manufacturer, distributor, or retailer of a product containing one or more class II substances could request, through the public comment process, an exception from EPA, citing methyl chloroform, carbon tetrachloride or halons as the only legal alternative(s). EPA stated in the NPRM that the Agency would consider such requests received during the comment period, but may require significant proof that such claims were not attempts to circumvent the intent of the ban. Moreover, EPA would consider the similarity of the class I substances and the corresponding class II alternatives to ensure the substances have parallel uses.

a. *Wasp and hornet sprays.* Just prior to issuing the NPRM, EPA learned of a product, a pesticide used to kill wasps and hornets nesting near high-voltage power lines, that may require an exception based on the solvent use of HCFC–141b in a new formulation, replacing the current formulation that uses methyl chloroform. EPA did not have enough information to determine what if any substitutes, other than methyl chloroform, exist, and whether or not worker safety or flammability concerns affect the use of alternatives in these products. Furthermore, EPA did not have confirmation that an application for formulations using HCFC–141b had been submitted under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) for these HCFC formulations. Therefore, the Agency did not propose to exempt the use of class II substances in wasp and hornet sprays used near high-voltage power lines. However, EPA requested comment on worker safety or flammability concerns regarding the manufacturing or use of these products, as well as comment on current and potential uses of class II substances in these products. In addition, EPA requested comment on whether the only available alternative to the use of a class II substance in wasp and hornet pesticides used near high-voltage power lines is the use of a class I substance.

EPA received two comments addressing this issue. One comment, from the manufacturer of wasp and hornets sprays, stated that many electric utility employees use wasp and hornet sprays while on ladders to work on high-tension power equipment. Sometimes these employees are fifty feet or more above ground. Solvent alternatives to class I and class II substances in these insecticides are flammable. Therefore, without using a class I or class II substance as the solvent, the utility worker would either be unable to destroy the wasps or hornets, or would be forced to spray a flammable product near a potentially charged line. Recently, an application for registration under FIFRA for a wasp and hornet spray formulation including HCFC–141b was submitted to EPA. EPA agrees with the concerns raised by this commenter. The class I ban exempted methyl chloroform. Therefore, manufacturers could continue to use methyl chloroform until methyl chloroform is no longer available. Based on this information, EPA believes it is appropriate, and in this action is providing an exemption for the sale and distribution of products using HCFC–141b as a solvent to replace methyl chloroform in wasp and hornet sprays used by private and public utility employees near high-tension power lines. EPA is further requiring that the seller of a wasp and hornet spray containing an HCFC as a solvent provide notification of the requirements to ensure that the exempted wasp and hornet spray is sold either to an organization that employs personnel who work near high-tension power lines and requires use of an HCFC-pesticide, or that the seller is selling the product only for eventual resale to such an organization. This notification will take the form of written notification of the requirements prior to any sale that occurs after January 1, 1994, by including this information on sales brochures, order forms, invoices and the like. The seller must notify the purchaser that "it is a violation of federal law to sell or distribute wasp and hornet sprays containing hydrochlorofluorocarbons as solvents to anyone, *except* for use near high-tension power lines where no other alternative except a class I substance is available. The penalty for violating this prohibition can be up to $25,000 per unit sold." EPA understands that at least one major manufacturer intends to label this product to accurately reflect this requirement. The Agency would like to clarify that this exemption is only for the sale and distribution of the product used near high-tension power lines; other consumer wasp and hornet sprays, including those used near electrical lines and cables, as well as other pesticides, are in no way affected by this exemption.

A second commenter suggested that EPA provide an exemption for HCFC–22 used as a propellant in wasp and hornet sprays because HCFC–22 is non-flammable and non-conductive. In the NPRM, EPA only discussed an exemption based on the use of methyl chloroform. EPA believes that while the solvent properties of methyl chloroform are similar to HCFC–141b, EPA does not believe this situation is true for HCFC–22. HCFC–22 is generally considered to be a propellant, while methyl chloroform is considered a solvent. Therefore, EPA does not believe that HCFC–22 in this product would be considered a substitute for methyl chloroform. It is possible that the commenter was making this request for an exemption based on the propellant uses of a different class I substance, such as CFC–12; however, the commenter did not provide such information, nor did the commenter demonstrate that the legal use of a class I substance is the only alternative for the use of HCFC–22 for this product. EPA believes there are adequate propellant substitutes available for use in wasp and hornet sprays. Therefore, EPA is not providing an exemption for the use of HCFC–22 in this product.

b. *Hydraulic Brake Cleaners.* EPA requested comments on the need to provide an exemption for the solvent uses of hydraulic brake cleaners. While the NPRM proposed an exemption for the solvent uses of class II substances in lubricants, coatings, or cleaning fluids used to clean electrical and electronic equipment, and for lubricants, coatings or cleaning fluids used to maintain aircraft, EPA did not propose an exemption for all hydraulic equipment. EPA received several comments concerning this issue. One commenter stated that it favored an exemption for hydraulic parts cleaning products for aircraft maintenance. EPA would like to clarify that the proposed exemption for the solvent uses of class II substances in aircraft maintenance was in no way limited to non-hydraulic applications, but applied to all aircraft maintenance cleaning including hydraulic applications.

A second commenter requested that EPA include marine and automotive cleaning as well as aircraft cleaning. The commenter manufactured a product using methyl chloroform. The commenter's new formulation includes a class II substance. The commenter stated that automotive cleaning applications, particularly in the area of brake cleaning, require a nonflammable product because the work is often performed in close proximity to high-temperature exhaust systems. The commenter states that nonflammable, safe solvents are necessary where there is an extremely high heat potential and the environment is enclosed. Potentially the products could be used near open flames and electrical equipment. While EPA agrees that a safe working environment is essential, EPA does not

VOL 58 ISS 249 DEC 30 1993 UMI

agree that an exemption for the solvent uses of class II substances is necessary for these products. The automotive maintenance industry employs a variety of flammable products and therefore, routinely provides an appropriate working environment for the use of these products. Moreover, there are many flammable brake cleaners regularly used by both professionals and do-it-yourselfers. In addition, nonflammable products that do not contain class II substances are available. These products may contain perchloroethylene and may therefore require particular worker safety conditions. However, EPA believes that these products represent adequate substitutes already accepted by the marketplace. Based on this information, EPA does not believe that the worker safety or flammability concerns raised by this commenter justify the requested exemption. Therefore, this final action will not provide an exemption for hydraulic brake cleaners, other than those used for aircraft maintenance as proposed.

c. *Portable fire extinguishers.* While in the NPRM, EPA discussed the legal authority to consider exemptions where the only available alternative for the class II substance(s) is halons, EPA did not propose any such exemptions. Prior to the issuance of the NPRM, EPA did not receive any comments regarding the substitution of HCFCs for halons as it relates to this rulemaking. During EPA's public meeting held to discuss the upcoming ban with affected stakeholders on March 29, 1993, EPA discussed the definition of the terms "aerosol products" and "pressurized dispensers" as well as the requirements under secfion 610(d). While representatives of the fire equipment manufacturing industry and chemical suppliers to that industry were present at this meeting, no information regarding the use of HCFCs as halon replacements or the potential need for exemptions was brought to the Agency's attention. Therefore, EPA did not propose any exemptions for halon replacements. However, during the public comment period, EPA received several comments requesting exemptions for HCFCs used as halon replacements.

In the Significant New Alternatives Program (SNAP) NPRM (58 FR 28093) being promulgated under section 612 of the Act, EPA discusses fire extinguishing streaming agents and total flooding agents. Halocarbons represent only a portion of the agents available for fire protection, and in fact appear to be a decreasing portion as more and more users are choosing to install "alternative" systems. However, a number of HCFCs have been suggested as halon replacements, including HCFC–22, HCFC–123 and HCFC–124 for both streaming and total flooding applications. Commenters claimed that there are particular situations where the only legal alternative would be the use of either a halon or a class II substance.

Two comments regarding the treatment of halon replacements indicated that the Agency should not consider any fire extinguishing equipment under the class II ban rulemaking. Another commenter suggested that EPA should add an exemption under this rule for "all pressurized fire extinguishers and fire extinguishing systems containing class II substances." This commenter also further stated that EPA treated fire extinguishing systems separately during the class I rulemaking and that the Agency should therefore take a consistent approach. EPA disagrees with both of these commenters. Fire extinguishing equipment was not treated separately or exempted under the class I ban rulemaking, but rather halons were not included in the class I ban. Portable fire extinguishers using CFCs were in fact banned.

Another commenter, also referring to the class I rulemaking, notes that in the final rule EPA defines chlorofluorocarbons to include Class I, Group I and III substances, but not Group II substances (halons). Therefore, while CFC-fire extinguishing equipment was banned, halon-fire extinguishing equipment was exempted. Furthermore, the commenter reviewed the preamble discussion for the proposed SNAP rule, published in the **Federal Register** on May 12, 1993 (58 FR 28093), suggesting that EPA consider a method to provide a consistent and complementary approach under this rule. The commenter also stated that it had expended substantial effort and resources in the search for, and development of, an environmentally acceptable halon replacement. A prohibition on the general use of class II substances as halon replacements in fire protection applications could result in deeming this commenter's efforts as useless. EPA agrees that halons were not included in the class I ban. EPA only banned the use of CFCs in aerosol products or pressurized dispensers. EPA further agrees that an outright prohibition on the use of class II substances could have an adverse economic impact on this industry; however, EPA does not have authority under section 610 to consider economic impacts. EPA may exempt products based only on flammability and worker safety concerns where a legal class I alternative exists, which would be the case with halon replacements, as they were not covered in the class I ban. Cases such as these are discussed below.

A third commenter stated that EPA is incorrect in its interpretation of section 610(d). Referring to the requirements under the 1978 ban on aerosol propellants and under other sections of Title VI, the commenter states that "the ban on CFC and HCFC use in aerosol products was clearly intended to cover its use as an aerosol propellant." The commenter further stated that "although HCFCs used as fire protection agents would in most cases be used in 'pressurized dispensers,' the HCFC is not the propellant, but is instead the active ingredient * * *" (the commenter does not believe) that section 610(d) was intended to cover the use of HCFCs as active ingredients in essential products such as fire protection equipment or extinguishers." EPA disagrees with this commenter. Congress in no way restricted consideration under this rulemaking to only the use of class II substances as propellants. Rather, Congress banned all class II uses of aerosols and pressurized dispensers unless qualifying for an exclusion. Moreover, the authority for all Title VI rulemakings is wholly separate in mandate and intent from the 1978 aerosol propellant ban.

A fourth commenter states that all fire extinguishers are pressurized to some extent, but that the Agency should consider categorizing them as equivalent to bulk containers. This commenter believes that the NPRM is in conflict with the SNAP NPRM and that banning the use of HCFCs in fire extinguishers would cause great economic hardship. EPA recognizes the need to consider decisions made under the SNAP rulemaking; however, SNAP determinations in no way restrict EPA authority under section 610. EPA believes that all portable fire extinguishers are pressurized dispensers, since pressure is necessary to propel the fire extinguishant and such extinguishant is dispensed directly from the fire extinguisher via a self-contained apparatus. Moreover, fire extinguishers are products, not bulk containers transporting chemicals.

EPA would like to clarify that all aerosol products and pressurized dispensers, regardless of their use, are encompassed under the statutory language that appears in section 610(d). Moreover, the use of all HCFCs, whether as propellants, solvents, or active ingredients are covered by the self-executing statutory ban. Congress in no way limited the types of products to be banned or the types of uses for HCFCs to be banned. Furthermore, while EPA had authority to consider which products would be banned under the rulemaking for the class I ban, the Act clearly bans aerosol products and pressurized dispensers containing HCFCs. Therefore, if EPA had not chosen to promulgate regulations at this time, on January 1, 1994, all aerosol products and pressurized dispensers, including fire extinguishing equipment, would have been automatically banned regardless of any SNAP determinations. While EPA does attempt to coordinate decisions made under various rulemakings, regulations promulgated under section 612 only determine which replacements are acceptable; however, the use of class II substances in aerosols and pressurized dispensers regardless of the application are still subject to the section 610(d) ban. This situation was discussed in various parts of the SNAP NPRM.

Nevertheless, it has come to EPA's attention that the situation may not have been thoroughly reviewed in the Class II Nonessential Products Ban NPRM as it relates to halon alternatives. EPA realizes that some extinguishants may be appropriate in certain environments on certain types of fires, whereas others would be appropriate in different situations. There may be cases where an HCFC is the only appropriate alternative to halons given the circumstances of the environment and fire potential.

EPA has authority under section 610(d)(2) to grant exemptions for the use of HCFCs where the only alternative is the use of a class I substance, which includes halons. As stated above, the equipment using streaming agents is consistent with the definition of an "aerosol product" or "pressurized dispenser" and therefore subject to this rulemaking. However, EPA recognizes that total flooding agents contained in total fire suppression systems used to extinguish fires are different from a portable device used to extinguish fires. These total flooding systems differ from an aerosol product or pressurized dispenser in that total flooding systems are "systems" that are completely installed and can be triggered to be automatically activated during an emergency situation. The extinguishant is incorporated into the system from bulk containers. Such systems thus do not constitute a pressurized dispenser or aerosol product within the meaning of section 610. Portable fire extinguishers, on the other hand, do constitute a pressurized dispenser, as they provide the product and dispensing apparatus in a self-contained portable unit. With this distinction, EPA believes that flooding systems and fixed automatic extinguishing systems are not included within the scope of the class II ban.

EPA discusses the Halon 1211 substitutes and alternatives for streaming applications in the SNAP NPRM. Halocarbon substitutes on the SNAP Proposed Acceptable list include class I agents (HBFC–22B1, CFC blends), class II agents (HCFC–22, HCFC–123, and HCFC–124) and perfluorocarbons (PFCs). Alternative technologies on the Proposed Acceptable list include dry chemical, carbon dioxide, water, and foam. Technical constraints restricts the applicability of several substitutes and alternatives in specific applications. In addition, due to environmental or health concerns, SNAP places further use restrictions on some of the substitute agents, such as restricting their use to non-residential applications only. Finally, other regulatory constraints limit the potential use of certain alternatives, as discussed below.

Regulatory restrictions being promulgated under section 612 may limit the availability of certain "acceptable" alternatives to the use of halons. For example, the SNAP NPRM includes several use restrictions based on various health and environmental concerns. Some restrictions are in keeping with the Climate Change Action Plan released by the President in October 1993, which directs EPA to use section 612 to control emissions of global warming gases.

Other regulatory constraints not fully discussed in the SNAP NPRM limit the situations in which certain "acceptable" alternatives may be considered. At least one alternative deemed "acceptable" under the SNAP NPRM uses CFCs in an application that was clearly banned in the class I rulemaking. The use of CFCs in portable fire extinguishers was banned in the class I final rulemaking and therefore, while the SNAP NPRM proposes that CFCs are acceptable alternatives, it is not legal to sell or distribute or offer for sale or distribution aerosol products or pressurized dispensers containing CFCs after January 17, 1994, unless specifically exempted by the class I ban rulemaking. CFCs in this application were not exempted under the class I ban.

HCFCs could potentially be used in portable fire extinguishing equipment for both the residential and commercial markets; however, in residential applications, EPA has determined that there are alternatives available that can be used effectively to suppress any fire that may occur. In commercial and industrial applications, there are situations in which portable fire extinguishers containing HCFCs meet the criteria for granting an exemption as set forth in section 610(d)—the use of the product is deemed essential as a result of flammability or worker safety concerns and the only alternative is the use of a class I substance that can be legally substituted. Therefore, EPA believes that in many applications, the only alternative to the use of a class II substance may be the use of a class I substance that can be legally substituted in fire extinguishing equipment. The reasons why other substitutes may not be suitable are discussed below.

Non-halocarbon alternatives to Halon 1211 are already in widespread use in selected commercial applications because of their effectiveness, and due to the current regulatory climate, their use has been increasingly adopted wherever possible. However, unlike Halon 1211, which is gaseous, these non-halocarbon alternatives are not "clean agents" and may cause secondary damage to the property being protected. In addition, in many commercial or industrial applications the types of fires that may occur, the confined environments in which the fires may exist, and the kinds of equipment or chemicals that may be involved will limit the effectiveness of many alternatives in commercial and industrial use. Therefore, the only alternative to the use of a class II substance in these situations may be the legal use of a class I substance (halons).

One alternative, CO_2, is adopted most frequently because it is the only non-halocarbon clean agent and in many applications, it will not cause any secondary damage. There are, however, several limitations that restrict its use. When used in confined spaces, CO_2 poses a significant risk of asphyxiation to occupants and thus, may only be used where sufficient ventilation exists. CO_2 requires six times the weight and storage volume of Halon 1211, and thus is not suitable where weight and storage constraints are a factor. In addition, there is some controversy about whether CO_2 contributes to thermal shock of electric components. Furthermore, CO_2 may not be used on Class A fires.

Water and foam are both very effective agents, but cannot be used on Class C electrical fires since they contribute to electrical shock hazards. In addition, they may cause significant secondary damage and thus are not suitable because the extinguishant can otherwise irreparably damage that which it is intended to protect.

Multi-purpose dry chemical is effective on Class A, B, and C fires, but like water and foam, can cause considerable secondary damage to certain equipment and could result in

VOL 58 ISS 249 DE 30 1993 UMI

greater health and environmental damage. For example, if the multi-purpose dry chemical damaged a critical component on a marine vessel or aircraft, it could threaten the safety of the crew and passengers.

Use of water, foam or CO_2 on hot metals is limited, as uneven cooling may lead to warping of costly components.

EPA does not believe a suitable alternative extinguishant would include a substance that would damage beyond repair the item the extinguishant is employed to protect. Therefore, EPA believes that to provide adequate fire protection in some circumstances, HCFCs may be the only available alternative to halons that can provide sufficient protection without creating a human hazard or irreparable damage from the original threat of flammability. Such cases might include, but are not limited to the following:

- Certain industrial settings, e.g. chemical/refinery processing;
- Certain electric utility facilities, e.g. nuclear power stations;
- Libraries and museums;
- aviation and marine vehicles;
- commercial settings containing types of high value electronic equipment.

For applications like these, halons or HCFCs may be the only suitable fire extinguishant to suppress a fire in progress without further damaging the equipment requiring protection and without creating a human hazard. The suitability of the agent implies that an agent is commercially available, that a fire will be extinguished quickly, and will result in minimum degradation of the products being protected from the fire. Some HCFCs, because of their chemical composition, may tend to suppress fires and reduce explosions in a shorter time and with smaller amounts of agent than do other alternatives, including some HFCs. The smaller amount of agents needed result in smaller amounts of acid gases, thus reducing risks to human health and safety. In light of this, EPA would consider a class II fire extinguishant as suitable in those cases where other alternatives are not commercially available and/or the chemical composition of the other alterative cannot be shown by accepted fire protection standards to be efficient in extinguishing fires in the relevant situations/applications. The selection of agents usually requires input from a fire protection professional who can assess the situation and the potential use of alternatives to class I and class II substances. EPA wishes to clarify that commercial availability in this of an alternative in this context does not consider the relative cost of that alternative or the convenience associated with its purchase.

The high cost associated with the use of class I and class II substances will likely influence the decision-making process whenever other alternatives are suitable and legal. EPA is aware that an industry infrastructure exists that can aid a commercial or industrial user in appropriate risk assessment and determinations of appropriate fire extinguishants. Furthermore, state and local fire codes in many cases require that the purchasers of fire protection equipment comply with widely accepted industry practices. The National Fire Protection Association (NFPA) has developed many standards that the industry regularly relies upon, as well as guidance on compatibility of certain extinguishants with certain types of potential fires and environments.

Class II substances may be the only available alternative for use in water vessels and in both non-commercial and commercial aircraft. Circumstances that involve the potential use of an extinguishant in a confined environment, where even limited damage to equipment may leave the water vessel or aircraft inoperable, may limit the feasibility of alternatives to class I and class II substances.

In light of the above discussion, EPA will exempt from the class II ban HCFC fire extinguishant alternatives for applications where HCFCs are the only suitable alternative to halon use other than alternatives that are subject to other regulatory constraints that effectively limit their legal use, including the final SNAP regulations, once promulgated. This includes situations where a clean agent is necessary to avoid irreparable damage to an area or the equipment being protected in that area or where other alternatives can cause a hazard to persons in the area. Prior to promulgation of the final SNAP rule under section 612, which is anticipated by February 15, 1994, those HCFC fire extinguishant alternatives found acceptable under the proposed SNAP regulations will be exempted from the class II ban, where a determination can be made consistent with industry fire extinguishant standards that there are no other acceptable alternatives for commercial and industrial use that can be substituted for halons.

EPA is requiring that distributors as defined in § 82.62(d) of portable fire extinguishers must verify that the purchasers of HCFC portable fire extinguishers are commercial entities as defined in § 82.62(b) or that the purchaser is the owner of a water vessel or non-commercial aircraft and that distributors make a good faith effort to ensure that the HCFC portable fire extinguisher is being purchased for use in a commercial or industrial establishment, or for use in a water vessel (as defined in 33 CFR part 177) or aircraft. In order to meet this requirement, EPA is requiring that the seller provide written notification of the requirements of this rule to the purchaser. This notification will take the form of a sign clearly posted where the portable fire extinguishers are displayed for sale. In cases where the purchaser does not physically come into contact with product at the point of sale, EPA requires that the seller provide prior written notification of the restrictions concerning the sale of HCFC portable fire extinguishers on sales brochures, order forms, invoices and the like. EPA reviewed the standards developed by NFPA and has based this requirement on those standards.

The seller must indicate to the purchaser that "it is a violation of federal law to sell portable fire extinguishers containing hydrochlorofluorocarbons to anyone, *except* for use in applications where necessary to extinguish fire efficiently without irreparably damaging the equipment or area being protected or where the use of other alternatives can cause a hazard to persons in the area. The penalty for violating this prohibition can be up to $25,000 per unit sold. Individuals purchasing such products must present proof of their commercial status in accordance with 40 CFR 82.66(a) or of ownership of a marine vessel or boat as defined in accordance with 40 CFR 82.62(j), or of ownership of a noncommercial aircraft in accordance with 40 CFR 82.66(k)."

EPA would like to clarify that the servicing of existing portable fire extinguishers is in no way affected by the class II ban. If after a discharge, a portable fire extinguisher is serviced and recharged, where ownership of the recharged product remains the same (e.g. not sold or distributed in interstate commerce), the servicing procedure, including recharging, is not affected by the class II ban.

2. Products Requiring Both Class I and Class II Exemptions

EPA realizes that the class II ban exemptions are integrally linked to the Class I Nonessential Products Ban. EPA believes the class I ban and the Act gave sufficient notice to the public, and through the class I rulemaking process, addressed all of the comments received by the Agency. EPA realizes that there are a number of products that do not use class I substances, but do use class II substances for which no other substitutes are workable and worker safety or flammability concerns exist. Some of the manufacturers of these products may not have commented on the need for a class I exemption, because they were not aware of the connection between the two bans (e.g. that class II exemptions could only be obtained where class I use was legal). Without a legal class I use, the Agency does not have authority under section 610(d) to grant exemptions under the class II ban. EPA proposed considering revisions to the class I ban to provide exemptions, such that appropriate class II exemptions could be granted for several products brought to the Agency's attention prior to the issuance of the NPRM. The Agency requested comment on the need to revisit the Class I Nonessential Products Ban through this rulemaking with respect to any other product for which there is no substitute for class II use other than a class I use which is no longer legal.

a. *Aircraft pesticides.* EPA specifically requested comment on the need to revise the class I ban to provide an exception for aircraft pesticides, with the intent that the class I substances would not actually be used. The class I exception would merely provide the basis upon which to grant a class II exception, where no other acceptable alternatives are available. In addition, EPA requested comment on worker safety or flammability concerns regarding the use of substitutes for class II substances that may be used or considered for use in aircraft pesticides.

EPA received comment from the Department of Defense (DOD), one of the primary users of aircraft pesticides. DOD stated that a nonflammable product is required in three areas: for the disinsection of aircraft for potential vectors of disease; for the treatment of pests aboard naval vessels, particularly submarines; and for the airlifting of pesticides to military forces deployed in specific regions. The military uses a formula with two percent d-phenothrin and requested a temporary exception for the continued manufacturing and sale of the present formulations until suitable substitutes are available. EPA agrees with DOD, that in many situations a nonflammable pesticide is essential and should be available for particular uses. EPA's determination regarding the aircraft pesticide product used by DOD is discussed below. EPA understands that DOD would be able to use the same product in all the situations discussed in their comments.

Comments were also submitted by the Air Transport Association Of America (ATA), representing many air carriers. The ATA stated that to the best of their knowledge they knew of only one producer of an aerosol insecticide that meets legal requirements for safe disinfection of aircraft during flights. Airlines operating internationally are legally required to abide by the Convention on International Civil Aviation to which the United States is a party, and the standards of the International Civil Aviation Organization. In conformance with recommended practices of the World Health Organization, aircraft insecticides must be effectively dispersed throughout all aircraft compartments after the aircraft has been closed for departure from the takeoff location. ATA stated that currently the only available product that meets all the requirements its members must adhere to contains either a class I or class II substance. ATA is aware of a new product that will be available shortly. Therefore, ATA requested that EPA consider a temporary exemption for this product.

EPA also received comment from a manufacturer who believes that a solvent recently developed that contains class II substances would be appropriate for use in aircraft pesticides. This product would represent a new pesticide, requiring registration under FIFRA. To the extent of EPA's knowledge, this formulation has not been submitted for review in accordance with FIFRA.

EPA received comments from two aircraft pesticide manufacturers. The first commenter stated that overseas flights have always used fogging insecticides to destroy pests while the plane is in the air. The commenter stated that there are no alternatives to the use of a class II substance in these products other than the use of a class I substance; therefore, EPA should revise the class I ban to provide the legal authority to consider an exemption for the use of HCFCs in this product, and then simultaneously provide an exemption under the class II ban.

EPA received a comment from a different manufacturer, the manufacturer that originally raised this issue with EPA. This manufacturer stated that they did not obtain a class I exemption because they were in the process of converting to the use of HCFCs. The manufacturer unsuccessfully tested several possible HFC formulations. At that point the manufacturer approached EPA and requested an exemption under the class II ban based on the need to manufacture a product that could meet the pressure standards put forth by the Department of Transportation (DOT) and still meet the flammability requirements put forth by DOD. However, the manufacturer states that recent findings lead the manufacturer to believe that a possible substitute that contains no ozone-depleting substances has been located. This product will include an element that will decrease the pressure of the HFC–134a, thus meeting DOT's standards. In order to register the product under FIFRA, the manufacturer will need to complete toxicological studies. Tests of this nature often take long periods of time. This manufacturer notes that they are aware of another product being used in Australia for aircraft disinfection; however, that product is not registered under FIFRA and would therefore need to complete the same toxicological testing to be approved for use in the United States.

EPA is pleased to learn that while this manufacturer was pursuing a potential exemption, the manufacturer continued to also investigate moving entirely away from class I and class II substances. In light of the manufacturer's determination that an alternative might exist, EPA cannot provide an outright exemption for the use of class II substances in aircraft pesticides. EPA recognized in the NPRM that products that require federal approval prior to using a new reformulation are often subjected to a lengthy review process. EPA proposed and is today exempting from the class II ban those products requiring federal approval prior to reformulation, provided that manufacturers of such products have made a request of the appropriate federal agency for such federal approval prior to January 1, 1994. EPA understands that at least one manufacturer will make the appropriate request prior to that date. The time frames associated with federal approval processes represent the amount of time necessary for the federal agency to conduct a responsible review of the formulations and determine the acceptability of the formulation under applicable statutes and regulations. The federal agencies cannot expedite their internal processing procedures simply because a formulation would otherwise be subject to a ban without compromising the integrity of their own program reviews.

To the best of EPA's knowledge, there is only one manufacturer that has a product available for use as an airline pesticide today, and that particular product contains a class I substance. EPA believes that a replacement product containing class II substances will be

VOL 58 ISS 249 DE 30 1993 UMI

available shortly, following federal approval, followed by a replacement that contains no ozone-depleting substances. Therefore, EPA is establishing a temporary exemption for aircraft pesticides releasing class I substances to expire upon federal approvals of any substitute product. EPA would like to clarify that if the substitute contains HCFCs, and if an application for an alternative formulation is filed by January 1, 1994, the use of class II substances will be exempt from the ban in accordance with § 82.65(b) and (c). Therefore, until the review process is complete, all aircraft insecticides that have applied for appropriate federal approvals will be able to legally use class II substances in their formulations under § 82.65(b). This exemption will expire after an alternative aircraft pesticide that does not contain class I or class II substances becomes available.

b. *Dusters.* Prior to issuing the NPRM, EPA was contacted by manufacturers concerned about the availability and economic feasibility of using substitutes to class II products. In particular, manufacturers of dusters and safety sprays had commented on the possible need for a class I exception based on the unavailability and the high cost of alternatives. EPA requested comment on the need to revise the Class I Nonessential Products Ban to provide a potential exception for these products. In addition, EPA requested comment on worker safety or flammability concerns regarding the use of substitutes for class II substances that may be used or considered for use in dusters and safety sprays. Two commenters stated that problems regarding the supply and availability of substitutes for class I substances were corrected earlier this year. These commenters were among those that raised the original concerns with EPA. In addition, one commenter noted that as a result of the need to reduce the levels of ozone depletion, the manufacturer began utilizing flammable propellants in 1989. The commenter believes that in certain duster and noise horn applications, flammable propellants are acceptable to the consumers. According to the commenter, these flammable products do not pose an extreme safety hazard. At the same time, non-flammable products are also available, albeit at a higher price. EPA received one comment suggesting that the only available substitutes to class I or class II dusters are hydrocarbons. The commenter believes that EPA should provide an exemption based on the increased risks associated with flammability. EPA disagrees with this commenter based on the information supplied by the other commenters, as outlined above.

EPA is not exempting dusters or safety sprays using class II substances in this final rule. The first two commenters clearly state that both flammable and nonflammable alternatives are currently available. EPA agrees with these commenters, recognizing that alternatives include HFC–134a and HFC–152a. Therefore, EPA agrees that there is no need to revise the class I ban with regard to dusters and safety sprays to facilitate continued class II use. EPA further notes that numerous other consumer products are flammable; however, the potential of an accident often can be greatly minimized by taking prescribed precautions. Moreover, EPA wishes to clarify that taking economic factors into account in its exemption determinations is not consistent with the statutory language in section 610(d).

c. *Tire Inflators/tire sealer.* EPA received comments from the manufacturer of tire inflator/sealer products. The commenter stated that it is within EPA's discretion to reopen the review period for consideration of additional "essential use" exemption applications for products containing or manufactured with class I ozone-depleting substances. The commenter stated that the alternatives to the use of a class I or class II substance for this product are either hydrocarbons or HFCs. The commenter further stated that the hydrocarbons are flammable and are volatile organic compounds that are precursors to formation of tropospheric ozone. The commenter stated that additional federal controls on hydrocarbons in consumer products potentially include use prohibitions in the future. The commenter noted that SNAP lists HCFCs as proposed "acceptable" alternatives in the regulations to be promulgated under section 612. In addition, the commenter believes that HFC–134a and HFC–152a are currently in short supply and are significantly more costly than HCFCs.

EPA does not believe that this commenter demonstrated a compelling need for EPA to revise the class I ban. As the commenter points out, alternatives are available. Several tire inflators and sealants are being sold today that contain hydrocarbons. Used as advised, precautions can be and are currently taken to prevent accidents. While future regulations may limit the availability of hydrocarbons, EPA cannot base its decisions today on what may happen in the future. Moreover, both HFC substitutes and not-in-kind substitutes (e.g. changing the tire) represent other alternatives to tire inflator/tire sealer products. Consideration of market conditions, including cost of substitutes, is not within EPA's discretion under section 610(d). Regulations promulgated under section 612 merely identify which substances are "acceptable" or "unacceptable" alternatives; they do not speak to the ban mandated under section 610(d) and cannot alter its effectiveness. The use of particular substances in the manufacture of aerosol or pressurized dispensers is still clearly subject to the class II ban. As noted above, taking the cost-effectiveness of substitutes into account is not consistent with the statutory language in section 610(d). Therefore, this final action will not include a reopening of the class I ban to consider the need to provide exemptions for tire inflator/tire sealer products. EPA will consider reopening the class I ban in the future should new regulations limit all available alternatives to class I or class II use.

The same commenter referred to an exemption under section 610 as an "essential use" exemption. EPA would like to clarify the distinction between exemptions under the nonessential products bans and essential use exemptions. Exemptions granted under the class II ban are for continued sale and distribution of products ozone-depleting substances that are currently produced and imported in the United States. These domestic regulations only impact the manufacturers, distributors, retailers and users of aerosol products, pressurized dispensers and foam products sold in the United States. On the other hand, under the Montreal Protocol process, member countries can put forth nominations for essential use exemptions that would allow for continued production of ozone-depleting substances after the production phaseout to be used in an application for which there are no suitable substitutes. The Parties receive and review these applications individually and may decide to grant particular exemption requests. If the Parties agree that a particular application is essential, additional production of an ozone-depleting substance will be authorized for that particular application after the phaseout has taken effect. The Parties will review essential uses on a yearly basis to evaluate if the essential use exemptions are still appropriate. EPA understands that this same commenter submitted a request for an essential use exemption, but that the commenter subsequently withdrew the application, since the commenter's apparent intention was to receive an exemption under the class I ban rather than the Montreal Protocol.

3. Aerosol Products and Pressurized Dispensers Exempted By The Class I Ban

The following eleven products were exempted from the class I ban:

- Medical devices listed in 21 CFR 2.125(e)
- Lubricants for pharmaceutical and tablet manufacture
- Gauze bandage adhesives and adhesive removers
- Topical anesthetic and vapocoolant products
- Solvent uses in lubricants, coatings or cleaning fluids for electrical or electronic equipment
- Solvent uses in lubricants, coatings or cleaning fluids used for aircraft maintenance
- Solvent uses in mold release agents
- Solvent uses in spinnerette lubricant/cleaning sprays
- Plasma etching
- Solvent uses in document preservation sprays
- Solvent uses in red pepper bear repellent sprays

Because of the differing mandates in, and statutory constraints of, section 610(a)(b) and (c) and section 610(d), EPA did not propose exemptions for all of these products in the NPRM for the class II ban; however, in all cases EPA requested comment on the need for and appropriateness of potential exemptions for these uses. Comments received by the Agency are discussed below.

a. *Lubricants for pharmaceutical and tablet manufacture.* EPA received one comment regarding a lubricant used in pharmaceutical manufacturing. This commenter stated that HCFC–141b has replaced CFC–113 as the lubricant carrier for the manufacture of hypodermic needles. The commenter notes that an exemption for HCFC–141b is consistent with the intent of section 610(d) to allow the use of HCFCs in medical devices, although in this particular application the exemption would be for the manufacturing process, not the product. The commenter indicates its belief that while such an exemption is not consistent with the statutory language, it may be consistent with Congressional intent. EPA agrees that the use of class II substances in the manufacturing of hypodermic needles is not consistent with the statutory language regarding the exemption for medical devices. However, EPA believes that under the class I ban's exemption for lubricants for pharmaceutical and tablet manufacture, EPA has authority to consider exemptions under the class II ban for hypodermic needle production, where the class II substances are used to replace CFC–113 as the only legally available alternative, and where there is a clear demonstration of flammability or worker safety concerns. However, in the absence of a demonstration of worker safety or flammability concerns in the production of hypodermic needles, which the commenter did not submit, the fact that the only legal alternative to the use of the class II substance is a class I substance, by itself, is not enough to allow EPA to include an exemption for the use of lubricant carriers for the manufacture of hypodermic needles in the final rule. EPA may reconsider an exemption for this use at a later date if presented with appropriate documentation.

b. *Solvent uses in lubricants, coatings and cleaning fluids for electrical or electronic equipment.* EPA proposed exempting the solvent uses of class II substances in lubricants, coatings, and cleaning fluids for electrical or electronic equipment. EPA received several comments favoring such an exemption. One commenter stated that the cleaners are often sprayed to ensure that the electrical contacts are free of dirt and other contaminants. In addition, one commenter stated that the only available substitutes contain hydrocarbons that pose increased risks associated with using a flammable product on electronic or electric equipment. The commenter claims that chemicals used in these cleaners must be nonflammable, nonconductive, nontoxic, odorless, quick-drying and effective, because the individuals using them are in very close proximity to the cleaner spray. Another commenter stated that in both these applications and in applications associated with aircraft maintenance discussed below, the products are used in "clean-in-place" situations, often near energized circuits, welding or soldering equipment, hot motors, engines or other hot surfaces.

EPA believes that the use of a product near a hot motor does not necessarily constitute a flammability concern; however, in cases where the product is used in close proximity to ignition sources, and where the user cannot provide adequate safety precautions, a nonflammable product is essential. Therefore, EPA agrees with these commenters. This final action adopts the proposed exemption for the solvent uses of a class II substance in lubricants, coatings and cleaning fluids for electrical or electronic equipment.

c. *Solvent uses in lubricants, coatings or cleaning fluids used for aircraft maintenance.* EPA received comments concerning the uses of class II substances in lubricants, coatings or cleaning fluids used for aircraft maintenance. One commenter stated that the only known substitute for the use of a class I or class II substance was a hydrocarbon. A second commenter stated that while the amount of class II compounds used in aircraft maintenance activities is low, until environmentally preferable alternatives become available, the use of class II compounds is necessary. The commenter stated that the concerns over worker safety and flammability raised in the NPRM are valid. The materials are often used inside the aircraft, which acts as a confined space. It is often difficult to ventilate these spaces, making the toxicity and flammability of the materials used particularly critical. As stated above, one commenter that provides products for both aircraft maintenance and electronic or electrical equipment cleaning noted that the products must often be used in "clean-in-place" situations. Several comments indicated that the physical characteristics of HCFC–141b are similar to CFC–113, exempted under the class I ban. EPA agrees with the concerns raised by many commenters. There are worker safety and flammability concerns that render the legal use of a class I substance as the only alternative to the solvent uses of HCFCs. Therefore, this final rulemaking will provide an exemption for the solvent uses of class II substances in lubricants, coatings, or cleaning fluids used in aircraft maintenance.

One commenter stated that aircraft maintenance should include all aircraft uses of the class II substances in aerosol lubricants, coatings and cleaning fluids because the same materials are used in manufacturing, flight tests, and in-service maintenance. EPA agrees that the exemption for the solvent uses of class II substances in lubricants, coating or cleaning fluids used for aircraft maintenance covers the use of these products during manufacturing, flight tests, and in-service maintenance.

d. *Solvent uses in mold release agents.* EPA received many comments regarding the uses of class II substances in mold release agents. All of these commenters supported EPA's proposed exemption for the solvent uses of class II substances in mold release agents. One commenter asked that EPA clarify that the use of HCFC–22 and HCFC–141b in the NPRM were merely examples of potential formulations for mold release agents. EPA agrees with this commenter. The Background Document on Aerosol Products and Pressurized Dispensers Containing Class

VOL 58 ISS 249 DEC 30 1993 UMI

II Substances and other information contained in the Air Docket for this rulemaking (A–93–20) provides additional information concerning various formulations of mold release agents.

Several of the comments stated that HCFC–22 was the solvent in their formulation or that since HCFC–22 has some solvent characteristics, it should be exempted. Among the characteristics categorized as "solvent" by the commenters were: compatibility with co-solvents; nonflammability, fast evaporation rate, low boiling points, and good carrier capacity. One commenter stated that in order to use dimethyl ether (DME) as a propellant in mold release agents, the DME must be in solution to avoid collection of DME vapor that could collect and ignite. Several commenters indicated that they use DME to lower the amount of ozone-depleting substances needed in their mold release agents. One commenter stated that HCFC–22 dissolves the solvent or similar lubricant and suppresses the flammability of the mold release agent. Additionally, commenters stated that the use of HFC–134a or other like substances requires that the mold release agent be shaken routinely before use. If the user neglects to shake the product, the DME vapor could collect and ignite.

EPA has considered these comments very carefully and disagrees with many of the commenters. The Agency has previously stated on several occasions, including in the NPRM for this rulemaking, that HCFC–22 is generally used as a propellant in aerosol products and pressurized dispensers. "Carriers" and "dissolvers" are not necessarily characteristics of solvents. Since many solvents are flammable, nonflammability is not necessarily a characteristic of solvents. HCFC–22's quick evaporation rate leads EPA to question whether the HCFC–22 ever directly reacts with the molds. While mold release agents are often used at high temperatures, without an ignition source, the temperatures are not sufficiently high for DME to become combustible. EPA is aware of flammable and water-based mold release agents that are currently available that do not contain ozone-depleting substances. While HFC–134a may not be appropriate in combination with DME, EPA believes it is an adequate substitute for other formulations. However, EPA believes that the HCFC–22 and DME formulations may represent the only compatible formulation for particular molds.

In response to the claim that HCFC–22 may act as a solvent, EPA believes it should nevertheless be categorized as a propellant wherever it serves that purpose as well. In the final regulations promulgating the 1978 aerosol propellant ban, FDA stated in a decision to regulate the use of an ozone-depleting substance in a particular case, that "the propellants have other functions, but many propellants have dual function. As previously explained in the final rule to require a warning statement, if all propellants with dual functions were excluded, many products might be excluded, or might claim to be excluded * * *. Thus, this products [sic] is subject to the regulation because of the propellant use of the chlorofluorocarbon" (43 FR 11313). Based on this earlier ruling, EPA believes that it is appropriate to treat solvent/propellants as propellants under this rule because EPA concludes that substitutes are available. Where HCFC–22 is used as a propellant, its use generally is banned under the final rule. Furthermore, EPA does not believe that the commenters have demonstrated when HCFC–22 in mold release agents is acting solely as a solvent; could this demonstration be made, such use would be permitted under the exemption for solvent use where substitutes are not available. Therefore, HCFC–22 will in most case be banned as a propellant under this final rulemaking.

However, after careful consideration, EPA believes there are many cases where the use of HCFC–22 as a propellant may be essential based on worker safety or flammability concerns where there are no legal substitutes. EPA believes that some commenters did sufficiently demonstrate that while there are many different formulations for mold release agents, there are cases where the use of HCFC–22 is essential based on worker safety or flammability concerns. While EPA is limited to considering an exemption only where the sole substitute is the legal use of a class I substance, EPA did propose to revise the class I ban as necessary where a particular product may not have been sufficiently considered in that rulemaking.

EPA believes that solvent uses of class I substances were sufficiently considered; however, propellant functions in this product may not have been sufficiently considered. There are a wide variety of molds that require differing formulations of mold release agents in order to be compatible. In the case of mold release agents, EPA believes there are cases where the only substitute to HCFC–22 is CFC–12 due to worker safety and flammability concerns. Therefore, through this final action, EPA will revise the class I ban to provide the legal authority to consider a class II propellant exemption for mold release agents using HCFC–22 as a CFC–12 substitute, and will simultaneously provide such an exemption under the class II ban. EPA believes that the industry will choose to continue using class II substances instead of class I substances, realizing that the revision to the class I ban was solely performed to provide the required authority for a class II exemption and the pending phaseout date for CFCs. The final § 86.66(d)(2)(vii) of the class I ban is revised to read:

> * * * mold release agents used in the production of plastic and elastomeric materials, which contain CFC–11 or CFC–113 as a solvent, but which contain no other CFCs, and/or mold release agents that contain CFC–12 as a propellant, but which contain no other CFCs.

Based on this action, EPA will simultaneously exempt under the class II ban the use of HCFC–22 as a propellant in mold release agents where evidence of good faith efforts to secure alternatives indicates that, other than CFC–12, there are no technically feasible alternatives; and the solvent uses of HCFCs in mold release agents, where a solvent/propellant is to be considered a propellant. EPA would like to clarify that suitable alternatives include use of other mold release agent formulations. The suitability of mold release alternatives in this context does not consider the relative cost of that alternative or the convenience associated with its purchase.

EPA will further require that the seller of HCFC mold release agents provide notification to the purchaser concerning this restriction on sale of HCFCs where no other alternative is available. This notification will take the form of a sign clearly posted where the HCFC mold release agents are displayed for sale or written notification of the requirements if the purchaser does not physically come in contact with a display at the point of sale. Written notification will be provided prior to the sale occurring by including the information on sales brochures, order forms, invoices and the like. The seller must indicate to the purchaser that "it is a violation of federal law to sell mold release agents containing hydrochlorofluorocarbons as propellants to anyone, except for use in applications where no other alternative except a class I substance is available. The penalty for violating this prohibition can be up to $25,000 per unit sold."

e. *Solvent uses in spinnerette lubricant/cleaning sprays.* EPA received six comments regarding spinnerette lubricant/cleaning sprays. One commenter stated that EPA should interpret 610(d)(2)(B) which states that EPA should provide an exemption where "the only available alternative to use of a class II substance is use of a class I substance which legally could be substituted for such class II substance" to mean that EPA should not allow an exception for a class II substance in any situation where "an alternative other than a class I substance was available." Therefore, the commenter believes that EPA should grant an exemption for all propellants in spinnerette lubricant/cleaning sprays because, other than the use of a class I substance (that could not be legally substituted), there are no alternatives to the use of a class II substance. EPA strongly disagrees with this commenter. EPA discussed in the NPRM that the two bans are integrally linked. In order to have an exemption to the class I ban, the only alternative must be the legal use of a class I substance. When the Clean Act Amendments were developed, clearly class II substances were viewed as merely interim substitutes for CFCs and would be available for a limited time after production of the class I substances ceased. Therefore, Congress appropriately limited the use of class II substances to situations where EPA already determined the use of a class I substance was essential, and where substitutes for ozone depleting substances were still unavailable. Therefore, EPA does not agree with the commenter's legal interpretation of section 610(d)(2)(B).

However, commenters stated that there are no available substitutes for all class II substances other than a class I substance in these uses. These commenters believe that there are class II substances that will be legally substituted for CFC–114 as a solvent; however, the commenters are concerned about class II propellants. Some commenters stated that EPA should exempt the solvents and propellants used as spinnerette lubricant/cleaning sprays, including HCFC–22, HCFC–142b, and HCFC–141b, noting that the worker safety and flammability concerns EPA discussed in the NPRM make it essential that a nonflammable formulation be used. One commenter believes that to meet worker safety and fire protection standards, the use of class I or class II substances is necessary for both propellants and solvents. All the commenters believe that sufficient alternatives to the propellant uses of class II substances, other than class I substances, have not yet been developed.

EPA agrees that spinnerette lubricants/clear ing sprays require a safe formulation. EPA is concerned that since these products are used by employees to wipe the spinnerette faces whenever a spinning machine is started or whenever a position breaks during operation, there are serious worker safety concerns. EPA believes that consistent with the mold release agents situation described above, EPA has sufficient reason to, through this final action, revise the class I ban with respect to propellants and simultaneously revise the class II proposed ban. Again, EPA believes that the industry will recognize the need to continue using class II substances instead of class I substances, realizing that the revision to the class I ban was solely performed to provide authority to consider an exemption to the class II ban and the pending phaseout date for CFCs. Therefore, EPA is revising § 82.66(d)(2)(viii) of the class I ban to read:

> Spinnerette lubricant/cleaning sprays used in the production of synthetic fibers, which contain CFC–114 as a solvent, but which contain no other CFCs, and/or spinnerette lubricant/cleaning sprays which contain CFC–12 as a propellant, but which contain no other CFCs.

Based on this action, EPA will simultaneously exempt the propellant uses of HCFC–22 and HCFC–142b, in addition to the solvent uses of class II substances in spinnerette lubricants/cleaning fluids under the final class II ban.

f. *Document preservation sprays.* EPA received thirteen comments concerning document preservation sprays. Most of the comments simply asked for an exemption based on the need to continue using the formulation that they currently purchase or sell. EPA received a series of comments from the one manufacturer of such sprays stating various reasons why EPA should provide an exemption for the use of HCFC–22 and HCFC–141b in their product. The manufacturer produces both aerosol and non-aerosol products. The manufacturer distinguishes between mass deacidification and deacidification by small institutions preserving a few documents per year. However, the manufacturer believes that the various potential not-in-kind substitutes are not always economically feasible or appropriate for very fragile papers. Originally documents were dipped into liquid solutions or the solutions were brushed onto the documents. These methods have various deficiencies relating to the need to ensure an even coat of the preserving chemicals. The manufacturer provided information concerning attempts to use propellants other than class I or class II substances. Nitrogen has successfully been used in larger containers; however, due to worker safety concerns involving improperly closed cylinders, these formulations do not represent a solution in all cases. DME's solvent properties caused the product to be too powerful, damaging what it was to preserve. Hydrocarbons alone or together with ether were evaluated but were found to be unsuccessful. The manufacturer further states that the HCFC–22 acts as both solvent and propellant in the aerosol product. The HCFC–22 is needed to lessen the solvent strength of HCFC–141b. Without HCFC–22, HCFC–141b would damage the document instead of preserving it. The manufacturer also provided EPA with information about the various alternatives used or considered both domestically and abroad. In every case, the manufacturer believes that either the product will damage the paper, will not create an adequate deacidification solution, or is not workable in every situation.

EPA reviewed these comments and other information gathered during this rulemaking. EPA believes that in almost every case, the not-in-kind substitutes are workable alternatives to the use of HCFC–141b and HCFC–22 in aerosol containers and pressurized dispensers. The manufacturer who provided extensive comments on the need for an exemption from the class II ban indicated that their own not-in-kind substitute was an appropriate alternative in many cases. Moveover, the manufacturer indicated that the not-in-kind alternative provided the added quality of strengthening the documents. However, as the manufacturer indicated, there are some situations in which their own substitute will not be effective. EPA considered the alternative products used both domestically and abroad. One alternative, involving a reaction of ammonia and ethylene oxide to form ethanolamine, uses di- and triethanolamine which are known to form a reaction product that is carcinogenic. Another alternative uses magnesium butyltriglycolate dissolved in either toluene or CFC–113. According to the submitted comments, initial results indicate that formulation may deface the documents and may have an unpleasant odor. EPA is aware of another potential substitute that contains perfluorocarbons (PFCs). The use of PFCs may be subject to restricts based on global warming potential and long atmospheric lifetimes under regulations promulgated under section 612. Moreover, the comments the

Agency has received indicate that the PFC-based product may not be appropriate for treating thick books, books with coated or dense paper, or tightly bound books.

EPA believes that in almost every case, either a not-in-kind substitute or a substitute formulation can be successfully used for preserving documents. However, EPA does not believe that all of the alternative formulations have been successfully tested to determine the degree of worker safety or flammability concerns. Therefore, EPA agrees that for treating thick books, books with coated or dense paper, and tightly bound documents, an exemption for propellant uses under the class II ban is required.

Based on worker safety and flammability concerns associated with the use of alternatives, and since the only alternative is the legal use of CFC–113, EPA will provide a solvent exemption for HCFC–141b. Furthermore, HCFC–22 is being used predominately as a propellant in document preservation. While it may also have some limited solvent capabilities in this product, as discussed above, solvents/propellants will be considered propellants under this rulemaking. Therefore, EPA will revise the class I ban and will today provide simultaneous exemptions under the class II ban for propellant uses in treating thick books, books with coated or dense paper, and tightly bound documents. § 82.66(d)(2)(x) of the class I ban will be revised to read:

• • • document preservation sprays which contain CFC–113 as a solvent, but which contain no other CFCs; and document preservation sprays which contain CFC–12 as a propellant, but which contain no other CFCs, and which are used solely on thick books, books with coated or dense paper and tightly bound documents.

EPA will provide a simultaneous exemption under the class II ban for HCFC–22 used as a propellant in document preservation sprays used solely to preserve thick books, books with coated or denser paper and tightly bound documents.

B. Foams

1. Definition of "Plastic Foam Product"

One commenter questioned EPA's definition of a "plastic foam product." EPA stated in the NPRM that the Agency interprets the term "plastic foam product" to mean any product composed in whole or in part of material that can be described as "foam plastic" or "plastic foam." The commenter believes that within the meaning of section 610(d) a plastic foam product should apply only to products such as cups, containers, and packaging where the product is wholly or primarily constructed of plastic foam or derives its essential purpose or functionality from the foam. The commenter bases this interpretation on the criteria for nonessentiality put forth in section 610(b). The commenter further believes that Congress did not explicitly require EPA to consider the essentiality of the product as it relates to section 610(d) because that language appears in section 610(b). EPA strongly disagrees with this commenter. Clearly Congress intended to ban products that are not wholly or primarily constructed of plastic foam or derive purpose or functionality from the foam itself. If Congress intended to only include the products suggested by the commenter, section 610(d)(3)(B) would not be necessary. Certainly an automobile does not derive purpose or functionality from the foam within the vehicle. Congress would not need to provide an exemption for foam needed to meet automobile safety standards if only products that were wholly or primarily constructed of plastic foam were to be banned. Moreover, Congress banned these products in their own terms, without requiring EPA to promulgate regulations. Therefore, since this ban does not require action on the part of the Agency, Congress could not foresee an explicit need for this final rulemaking; thus, it cannot be assumed that the standards put forth in section 610(b) (that require EPA to promulgate regulations) would apply to this self-executing ban. The section 610(b) criteria apply to EPA identification of additional nonessential products. They do not apply to EPA interpretation of the products Congress identified as nonessential in section 610(d).

EPA received one comment stating that an agency must construe the statute in a way that is consistent with the underlying purpose of the statute. (See *Batterton* v. *Francis*, 432 U.S., 416, 425 (1977), and *Gelman* v. *Federal Election Commission*, 432 F.2d 939, 943 (D.C. Cir. 1980)). The commenter further stated that Congress did not intend for Section 610(d) to cause manufacturers to switch to CFCs as a foam blowing agent. EPA agrees with this commenter and believes that where the use of HCFCs are banned, alternative blowing agents exist, alternative products that can perform the same function exist, or the product is not essential for the functioning of society. EPA has exempted HCFC use from the ban wherever a legal use of a CFC is the only available alternative.

2. Definition of "insulating products"

EPA requested comments on both its proposed definition of "insulating products" and potential alternative definitions. The majority of the commenters supported EPA's proposal to define "a foam insulation production as any product that is made with closed cell rigid polyurethane foam, closed cell rigid polystyrene boardstock foam, and closed cell rigid phenolic foam; and in addition, pipe insulation made out of closed cell rigid polyethylene foam. One commenter stated that the 1989 UNEP Technical Options Committee issued a report that identified two broad categories—foam that has significant thermal insulating properties and foam that does not. The report concludes that the three types of foams that have significant thermal insulating properties are closed cell rigid polyurethane foam, closed cell rigid polystyrene foam and closed cell rigid phenolic foam. As EPA stated in the NPRM, EPA based its decision on how to define which products were insulation products on work completed by the same UNEP Committee. The commenter further stated that there are compelling policy reasons for using a definition based on foam type rather than on perceived end-use. The commenter believes that under an all end-use approach, EPA may need to evaluate thousands of individual products containing foam produced with HCFCs to determine whether the foam in those products was serving an insulating function. EPA agrees that if the Agency were to require a review of every end-use, such a process would be both time-consuming and burdensome for both the Agency and industry.

One commenter suggested that EPA should expand its proposed exemption for existing inventories to become the basis for exempting all flotation foam or other uses of exempted products. The commenter believes that the de minimis standard in the *Alabama Power* decision should be applied to all types of non-insulating applications of closed cell rigid polyurethane, polystyrene, and phenolic foam. The commenter noted that in the NPRM, EPA identifies flotation foam as the largest non-insulating application of closed cell polyurethane and that the impact of using HCFCs in all the non-insulating applications of polyurethane would be insignificant. EPA agrees that the use of insulating foam products for non-insulating applications will have an overall insignificant impact on stratospheric ozone when considering all the domestic and international actions being taken in their entirety. However, EPA does not believe that this commenter has sufficiently demonstrated how the acknowledged continued use of an insulating foam product in non-insulating applications is consistent with the de minimis standard within the meaning of the *Alabama Power* decision. EPA believes that the statute clearly bans the sale and distribution of foam that does not meet the criteria for the two statutory exemptions; however, the statute does not regulate the use of such exempted products.

A few commenters stated that they use closed cell rigid polyurethane foam, at least in part, to protect against noise and vibration. EPA stated in the NPRM that Webster's Dictionary defines to *insulate* as "to separate from conducting bodies by means of nonconductors so as to prevent transfer of electricity, heat, or sound." EPA suggested that this could be the basis for an alternative definition of insulating foam. However, since these comments expressed support for the proposed definition, EPA does not believe that these commenters were indicating that EPA should consider promulgating an alternative definition.

Many commenters stated that EPA's proposed definition would be less burdensome for industry to comply with and for the Agency to enforce, than any alternative definition. Several commenters were particularly concerned with the increased burden an end-use approach would create. A few commenters were not convinced that they would be able to identify which products were banned and which were exempted if a total end-use approach was included in the final rule. EPA agrees with these commenters. The Agency recognizes the need to consider the ability of industry to recognize which products are subject to the ban.

One commenter stated that EPA's proposed definition gives the Agency the discretion to add other products or categories where it can be sufficiently demonstrated that the foam product is used principally for foam insulation purposes. EPA agrees with this commenter. Several commenters suggested that EPA consider specific products or categories. EPA received several comments asking the Agency to broaden its definition to include other products or types of foam and a few comments asking EPA to consider a more narrow approach to exclude products. These comments are discussed in detail below.

a. *Closed cell rigid polyurethane foam.* EPA received many comments regarding the inclusion or exclusion of non-insulating applications under EPA's proposed definition. Many of these comments relate to the use of a closed cell rigid polyurethane foam in various applications. The comments will be discussed according to the foam's non-insulating application.

i. Foam used as flotation foam. The largest non-insulating application of closed cell polyurethane foam is as marine foam used in the manufacture of certain types of boats. The U.S. Coast Guard estimates that there are approximately 3,000 small volume boat builders, who produce anywhere from less than ten boats to several hundred boats annually, representing twenty-five percent of the recreational boats manufactured in the United States annually. The U.S. Coast Guard believes that to date, only a few of the small volume builders have experimented with non-CFC/non-HCFC blowing systems.

EPA received twenty-three comments that directly address the current uses of closed cell polyurethane foam in marine flotation applications, especially for boats that are under twenty feet in length. Several comments referred to U.S. Coast Guard regulations that require minimum flotation standards for all boats under twenty feet in length and to standards put forth by the American Boat and Yacht Council. A few comments requested that EPA specifically consider the need for HCFC foams in order to meet the U.S. Coast Guard standards. While EPA believes it is important for the manufacturers of boats under twenty feet to provide adequate flotation by meeting the U.S. Coast Guard standards, EPA cannot provide an exemption for flotation foam based on those regulations. EPA's only authority is to exempt insulating foams, and EPA has concluded that flotation foam is not thermal insulation foam within the meaning of section 610(d)(3).

U.S. Coast Guard regulations (33 CFR 183.101, subpart F) require that boats less than 26 feet in length meet certain flotation standards. While many small boat manufacturers currently use CFC- or HCFC-blown foam as both structural and flotation material in the manufacture of their products to comply with these regulations, these U.S. Coast Guard standards are performance-based and do not specify the use of any particular product. Such a broad exemption for all flotation foams would in no way be consistent with the statutory language in section 610(d). The statute specifically states that EPA will exempt certain foam products "utilized to provide for motor vehicle safety in accordance with Federal Motor Vehicle Safety Standards where no adequate substitute substance (other than a class I or class II substance) is practicable for effectively meeting such Standards." EPA believes that if Congress intended for the Agency to also consider U.S. Coast Guard standards, language to that effect would have been written into the statute. Furthermore, while the EPA is providing a temporary exemption for products requiring federal approvals before reformulating a product, EPA does not believe there are any U.S. Coast Guard regulations that require a manufacturer to receive approval to use a new formulation prior to use.

EPA received one comment from a foam manufacturer who indicated that many manufacturers believed that foam used for flotation purposes would be considered nonessential for purposes of the class II ban. The commenter further stated that during the last several years the manufacturer has been developing suitable alternatives. The manufacturer stated that such products have been developed and would add only approximately $10 to the price of the boat. The commenter encouraged EPA to take a position that would foster the use of this new technology, constrained only by the time needed by the commenter to prove the product's suitability to the marine flotation industry. The manufacturer suggested an approach similar to the sunset provision provided for certain foam products needed to meet automotive safety standards. EPA applauds the efforts of this manufacturer. EPA's research indicates that there are currently boats on the market today that do not use HCFCs in their foam blowing process. However, EPA is not given authority under the statute to consider any time-based exemptions except in the case of foam needed to meet Federal Motor Vehicle Safety Standards where EPA may determine when other substitutes will be available to meet safety standards. With respect to foam, EPA has no authority to create exemptions based on the availability of substitutes in other areas. The statute exempts all foam insulation without any clarifications; however, the statute exempts foam needed to meet Federal Motor Vehicle Safety Standards where no adequate substitute is practicable. Once substitutes are available to meet those standards, HCFCs are no longer required. Similar language is not contained in the exemption for foam insulation. Therefore, while the Agency agrees with the need to encourage industry to move away from HCFCs, EPA does not believe it can regulate such a move without revising its definition of what is an "insulating product." The Agency does not believe

VOL 58 ISS 249 DEC 30 1993 UMI

this to be appropriate under the statutory language.

Several comments referred to polyurethane foam's ability to provide structural integrity, to provide sound insulation, to provide cushioning for fuel tanks, to insulate against cold water temperatures, and other functions the foam can perform for watercraft. One commenter additionally stated that in cases where the boat may be a year-round home, not exempting its use in boats, while exempting the use of closed cell rigid polyurethane used for thermal insulation in a traditional house, would be arbitrary. EPA believes that the boating industry does not primarily choose to use closed cell rigid polyurethane foam for its thermal capabilities; however, EPA agrees that it would be arbitrary to not allow its use as a thermal insulator in a structure that may act as a year-round home. EPA states in the NPRM that the Agency does not believe it has authority to regulate the actual use of a product that was exempted from the ban based on its characterization as a thermal insulating foam (in the case of closed cell rigid polyurethane foam), even in individual cases where the Agency believes that the product may not primarily be used for the thermal insulating qualities upon which EPA based the exemption.

A number of manufacturers reported dissatisfaction with non-CFC and non-HCFC blowing agents. One commenter stated that while HFC–134a has passed the U.S. Coast Guard's testing requirements, the industry has had difficulty with water absorption, rendering questions about the integrity of HFC–134a blown foam. In one case, the foam absorbed one pound of water per cubic foot. HFC–152a is gaseous at room temperature and is flammable. One comment stated that the use of HFC–152a would require special equipment, temperature-controlled storage and new safety precautions. The commenter further stated that HFC–152a would not be cost-effective. Several commenters discussed water-blown foams, stating that many questions concerning its performance were still outstanding. One commenter discussed the possible use of hydrocarbons such as cyclohexane and pentane, raising issues about safety and storage of flammable blowing agents, and the need to provide specialized employee training and supervision.

EPA understands that some boat manufacturers are hesitant about switching to alternative blowing agents. However, EPA believes that while many alternatives may require additional management controls, workable solutions to the use of ozone-depleting chemicals do exist. Furthermore, one of the most promising alternatives, the use of HFC–134a and water in combination, was specifically omitted by commenters. EPA does recognize that flotation foam serves as an important safety feature for many small watercraft and also that the use of closed cell polyurethane foam serves as a structural element. While EPA does not believe that the manufacturers of these boats are primarily choosing to use closed cell rigid polyurethane in order to provide thermal insulation, under this final action, manufacturers of boats will be able to continue using HCFCs in closed cell rigid polyurethane used for the manufacturing of their products, because the final rule exempts all closed cell rigid polyurethane under the definition of thermal insulating foam regardless of the ultimate use of such thermal insulating foams.

EPA received one comment stating the boats manufactured with HCFCs should not be required to be labeled. EPA wishes to clarify that at this time, the Agency has not promulgated regulations requiring products containing HCFCs to be labeled. However, the Administrator has the authority to promulgate such regulations in the future, under section 611 of the Act.

ii. Taxidermy. EPA received seven comments concerning the uses of polyurethane foam in the production of mannikin forms. Most of the commenters stated that the only proven alternative blowing agent, cyclohexane, would increase workplace health hazards significantly. One commenter stated that allowing the continued use of an HCFC-blown foam by taxidermists is inconsistent with the intent of Congress in developing this statute. While EPA agrees that the use of HCFC-blown foam by taxidermists would otherwise be nonessential within the meaning of section 610(d), and despite the fact that EPA believes that with the proper precautions, alternative blowing agents can be used safely, the foam used falls within one of the three UNEP categories of thermal insulating foam and is thus exempted under this final rule. Section 610(d)(3)(A) specifically exempts thermal insulation products, regardless of how those products are ultimately used. EPA does not believe it has the ability to practically regulate the use of all exempted products.

iii. Aerosol polyurethane foam. EPA received one comment requesting an exemption for aerosol polyurethane foam, also known as one compound foam. EPA has previously discussed that, in the final class I ban, aerosol polyurethane foam is a closed-cell rigid polyurethane product. Aerosol polyurethane is used by builders and do-it-yourselfers in a variety of applications. These include draft-proofing around pipes, cable runs, doors and windows; sealing doors and window frames; and joining together insulating panels, roofing boards, and pipe insulation. EPA stated that aerosol polyurethane foam would be treated as a foam and not as an aerosol product. Therefore, aerosol polyurethane foam products are included in the definition of foam insulation and exempted from the ban.

b. *Closed cell rigid polystyrene boardstock foam.* EPA received two comments regarding the use of closed cell rigid polystyrene boardstock foams. One commenter stated that while they have made a long and diligent search for an environmentally acceptable substitute for the uses of polystyrene for a non-insulating application, they have not yet been successful. The commenter stated that as soon as an alternative has been located, closed cell rigid polystyrene boardstock foam will no longer be used in their application. As stated above, EPA cannot practically regulate the use of an exempted product; however, EPA is pleased to learn that legal users of HCFC-blown foam will continue to investigate alternatives to non-insulating uses.

EPA received a second comment requesting that EPA clarify a possible inconsistency between the UNEP documents and the NPRM. EPA does not believe such an inconsistency exists. Both the Agency and UNEP documents discuss various types of foam products by category and often according to use. The UNEP documents reflect a similar structure. EPA believes that the rule and the accompanying Background Documents properly identify the types of foam exempted under the ban.

c. *Closed cell rigid polystyrene sheet foam.* EPA received three comments regarding closed cell rigid polystyrene sheet foam. The commenter stated that closed cell rigid extruded polystyrene sheet foam should be added to EPA's definition for insulating products based on its uses at certain thicknesses. A second commenter stated that their products are used as an underlayment when putting new siding on an existing home or other structure, as insulation and waterproofing protection for perimeter concrete and masonry walls, and as an underlayment when resurfacing flat roofs. The commenter noted that these products have an "R value" (rated resistance to heat flow used as a measure of insulating capacity) and suggested that EPA should exempt closed cell polystyrene sheet foam in fanfold form with a facing material. EPA disagrees with these commenters. Extruded polystyrene foam sheet is primarily manufactured for food service and food packaging products. Traditionally, halocarbons have been attractive blowing agents for these products; however, hydrocarbon blowing agents and HFCs are among the alternatives. Many manufacturers, particularly those in the food service industry, have made great strides to eliminate their use of halocarbon blowing agents. Furthermore, the R value cited by two manufacturers ranges from 1.0 to 1.5. EPA does not believe that a product with those low R values can provide meaningful thermal insulating qualities. EPA believes that in general, these products are used to provide moisture resistance and a smooth surface, not as thermal insulation product. Therefore these products are not consistent with EPA's definition of an insulating foam product. Consequently, this final action will not expand the definition of a foam insulation product to include closed cell rigid polystyrene sheet foam or closed cell polystyrene sheet foam. § §

d. *Closed cell polyethylene foam.* EPA received six comments concerning polyethylene foam products. These comments dealt specifically with two different polyethylene foam products: backer rods and pipe wrap. Each product is discussed individually.

i. Backer rods. Two commenters believe that EPA should expand its definition of foam insulating products to include backer rods made with polyethylene foam because the backer rods have "significant" thermal insulating properties. One commenter stated that the use of hydrocarbon blowing agents instead of HCFCs presents unreasonable risks to human health. Commenters disagreed with the Agency's proposal to exclude backer rods from the definition of insulating foam products. One commenter stated that the statutory language and legislative history support a broader definition that would "indisputably" include backer rods. The commenter further believes that under the proposed definition of foam insulation products, backer rods should be exempt from the ban because of their thermal insulating capabilities. The commenter believes that the Agency's failure to propose including backer rods is not consistent with either the 1991 UNEP Flexible and Rigid Foams Technical Options Report, produced under the auspices of the United Nations Environmental Programme (UNEP) or the Background Document on Foam Products Made with Class II Substances, drafted as a background document to accompany this rulemaking. EPA reviewed these documents to confirm the commenter's statements. EPA would like to clarify that the 1991 UNEP Flexible and Rigid Foams Technical Options Report clearly categorizes polyethylene foam as "rigid packaging foam." The chart on p. 6 of the May 1993 Background Document on Foam Products Made with Class II Substances, listing principal foam types and applications, does not list thermal insulation as an application for closed cell polyethylene foam. Furthermore, on p. 21, the Background Document states that polyethylene foam is "used primarily for packaging." The Background Document does state that in some applications, thermal insulation is among the desirable properties; however, the Background Document indicates that these applications are either in addition to the primary packaging functions (e.g. packaging military equipment such as missiles) or in pipe wrap (as discussed below).

One commenter stated that excluding polyethylene backer rods conflicts with the Internal Revenue Service (IRS) regulations. According to the commenter, IRS regulations specifically identify backer rods a type of rigid foam insulation. As EPA stated in the NPRM, the IRS defined "rigid foam" as any closed cell polymeric foam (whether or not rigid) in which chlorofluorocarbons are used to fill voids within the polymer. The IRS definition of foam insulation is markedly different from the one proposed by EPA, in part because they were written with different statutory mandates and different implementation goals in mind. The IRS definition does indicate that Congress intended to single out foam products on the basis of their thermal insulation properties, in establishing the excise tax.[4] However, EPA's mandate calls for the Agency to exempt only "foam insulation products." Many non-insulating products contain some incidental insulating characteristics, but could not be considered foam insulation products. EPA firmly believes this is the case with polyethylene backer rods. The information submitted to EPA indicates that at best, backer rods still have low R values. Moreover, the primary function of backer rods used in the construction of buildings is to provide moisture protection.

[4] If this commenter intended for EPA to adopt the IRS definition in its entirety, for this rulemaking, EPA wishes to point out that the IRS definition of rigid foam insulation only considers foam blown with CFCs and would result in no exemption for any foam insulation product containing HCFCs unless they contained CFCs as well.

One commenter stated that no effective substitutes for polyethylene foam backer rods are available for use in expansion joints. The commenter further believes that there are no blowing agents that can be effectively used to produce the backer rods and provide thermal capability. A second commenter stated that at considerable expense, they converted their manufacturing extrusion processes to non-HCFC alternatives. The commenter commended EPA for not including backer rods in the proposed definition. The commenter stated that backer rods are not used by the construction industry as thermal insulators. The function of backer rods is to fill the void in wall joints and seams for the application of sealants. Furthermore, the commenter does not believe it is necessary to use ozone-depleting substances to manufacture backer rods. According to this commenter, the backer rods manufactured with hydrocarbon blowing agents (e.g. isobutane) are currently sold and used throughout the United States and the world. As discussed above, EPA believes the thermal capability is a secondary function for backer rods and is pleased to know that alternative blowing agents are successfully being used. Therefore, this final action will not broaden the definition of a foam insulation product to include backer rods.

ii. Pipe wrap. EPA received three comments concerning polyethylene pipe wrap. One commenter, a polyethylene manufacturer, stated that at considerable expense, the manufacturer converted its extrusion processes to non-HCFC alternatives. The commenter strongly disagreed with the proposed inclusion of closed cell polyethylene pipe wrap within the definition of foam insulation product. The commenter believes that including pipe wrap in the proposed definition may result in adverse environmental impacts. Furthermore, the commenter believes that EPA should rely on the research of the UNEP. UNEP does not include any polyethylene products in the categories described as thermal insulators. The commenter stated that they manufacture a comparable product without the use of ozone-depleting substances. The commenter stated that arguments that HCFCs used as blowing agents allow for a better thermal insulating material are incorrect. The commenter has been using hydrocarbons to meet the "toughest thermal insulation specifications." In addition, the commenter stated that after a period of time the blowing agents are replaced by air in the finished

VOL 58 ISS 249 DEC 30 1993 UMI

products. EPA applauds these efforts to move away from HCFC use in thermal insulating uses. However, section 610(d) clearly exempts all foam insulating products, and thus EPA must provide exemptions for all products that clearly meet the definition of thermal foam insulation products.

One commenter raised concerns about the ability to use hydrocarbons safely. The commenter referred to the proposed SNAP regulations being promulgated under Section 612. The commenter points out that EPA states in the SNAP NPRM that the use of hydrocarbons have possible dangers. "Conversion to using hydrocarbons may entail significant capital investments in order to ensure worker safety fire hazards" (58 FR 28123). EPA would like to clarify that the SNAP NPRM does propose hydrocarbon blowing agents as an acceptable alternative for all polyolefin foams. In many industrial processes various safety precautions are necessary. One commenter stated that arguments surrounding the inability to use hydrocarbon blowing agents safely are groundless. The commenter stated that assuming reasonable safety precautions are undertaken, hydrocarbons can easily be used safely. EPA agrees that, if reasonable and adequate safety precautions are taken, hydrocarbons can be used safely in the production of polyolefin foam products.

Two commenters are concerned about EPA's approach in the case of pipe wrap. Both commenters believe the Agency should consider all polyethylene products together, one indicating that they all should be banned, the other believing they all should be exempted. Concerns about enforcement were raised. EPA chose to take a category-based approach in the other three exempted sectors, because an overwhelming majority of products produced with those types of foams are primarily used for insulation. That approach was also consistent with UNEP. In the NPRM, EPA raised serious concerns about how to enforce an end-use definition that would require the review of a tremendous number of products. Furthermore, the Agency felt that using an approach consistent with UNEP was most likely the intent of Congress. However, EPA proposed to add one additional product based on what the Agency believed were convincing reasons to consider a slight variation to the UNEP approach. EPA does not believe any other polyethylene product is used primarily for its thermal capability. In fact, EPA believes in all other cases, any thermal capability is incidental. The particular shape of pipe wrap, which increases its R value, and its primary insulating use, added to EPA's belief that it should be considered an insulating product. Moreover, from an enforcement perspective, adding one end-use product did not create a burden equal to that created by the potential of a total end-use regulatory regime.

One commenter was concerned about including only pipe wrap because manufacturers of various polyethylene end-use products, including pipe wrap, may be forced to convert to alternative blowing agents regardless of the inclusion of pipe wrap in EPA's definition. EPA believes that conversions away from ozone-depleting blowing agents is consistent with the intent of Title VI in its entirety. Regardless of this rulemaking, manufacturers will need to convert in the near-term to alternatives.

One commenter stated that some of the shapes they manufacture are cylindrical in design and are perfectly suitable for use as pipe wrap while other shapes clearly are not. The commenter raised concerns about judging what can be sold and what cannot. EPA understands these concerns. Accordingly, EPA will modify the NPRM's language in this final rulemaking to read: "* * * closed cell rigid polyethylene foam when such foam is suitable in shape, thickness and design to be used in a product that provides thermal insulation around pipes used in heating, plumbing, refrigeration, or industrial process systems." For the purposes of this rulemaking, suitability in this instance, refers to the size, shape, and thickness of the polyethylene products. Products that are cylindrical and hollow in shape, sized properly for use with pipes, and with a thickness appropriate for insulating pipes will be exempt. EPA hopes that manufacturers will make good faith efforts to ensure that the products manufactured with class II substances will be used in the exempted application. However, as stated above, under section 610 the Agency cannot practically regulate how all insulating products are used.

e. *Inomer foam.* EPA received one comment from the manufacturer of inomer foam. The commenter indicated that this type of foam is a member of the polyolefin family. The commenter manufacturers inomer foam with an integral skin to fabricate "insulating safety related products." The commenter stated that manufactured products include pipe insulation, rigid flotation foam for buoys, foam flotation collars, skier safety products, wiper seals for storage tanks, and seating surfaces for ski resort lift seats. The commenter stated that hydrocarbons had been considered only to a limited extent due to concerns raised by the manufacturer's insurance carrier. The commenter asked EPA to provide an exemption for inomer foam whether or not the foam is used for insulating purposes. The polyolefin foam family includes polyethylene and polypropylene. EPA understands that inomer foam is an enhanced form of polyethylene foam that includes zinc metallic ions to provide additional structural integrity, bonding, and durability. Since inomer foam is actually an enhanced form of polyethylene, inomer pipe insulation will be considered foam insulation product within the meaning of section 610(d)(3)(A); however, no other foam products manufactured with inomer foam will be considered insulating products. Under the final rules, all inomer foam that is suitable for use as pipe wrap will be exempt from the class II ban.

f. *Polyvinyl chloride.* EPA received one comment concerning the use of class II substances in the production of extruded polyvinyl chloride (PVC) foam. The commenter stated that PVC foam is used for gasket and sealant products, available in a variety of shapes and sizes, used in refrigeration, construction, automotive and other applications "where thermal insulating and low moisture absorption properties are essential." The commenter further stated that alternative blowing agents are actively being investigated and have been successful for at least half of this manufacturer's products. The commenter requested that PVC foam be considered an insulating foam product by this final action. EPA does not believe PVC foam is used primarily as thermal insulation. Whatever thermal characteristics PVC products may contain, EPA believes these are incidental. The class I ban briefly discusses PVC foam (58 FR 4778), stating that although both PVC foam and expanded polystyrene foam "could be considered flexible and packaging foams, EPA did not propose banning products made with expanded polystyrene foam or polyvinyl chloride foam in the NPRM for the class I ban because the 1991 UNEP report indicates that CFCs were never used in the production of either expanded polystyrene or polyvinyl chloride." EPA did reserve the right to revise the class I ban to specifically ban either expanded polystyrene or polyvinyl chloride if EPA learned CFCs were being used in the manufacturing of those products. EPA does not believe PVC foam is used as thermal insulation. Therefore, EPA is not revising the definition of a foam insulating product under this final rulemaking to include products produced with PVC foam.

3. Foam Needed To Meet Motor Vehicle Safety Standards

EPA received three comments concerning the proposed provision to allow the use of class II substances in the production of integral skin foam used to meet Federal Motor Vehicle Safety Standards, sunsetting on January 1, 1996. One commenter agreed that EPA has authority to sunset the exemption for integral skin foam products needed to meet Federal Motor Vehicle Safety Standards; however, the commenter did not believe that EPA should sunset the exemption at this time. The commenter stated that the non-HCFC products have not yet completed safety testing and factories are not yet retooled for using the alternatives. EPA discussed in the NPRM that the January 1, 1996 sunset date was chosen based on information that alternatives will most likely be able to complete safety testing and become available before that date. If the Agency receives sufficient information indicating that by January 1, 1996, alternatives will not be available, EPA will consider revising that date. At this time, EPA believes that alternatives will be available by January 1, 1996. However, the Administrator may reconsider the date for sunsetting this provision at a later date.

One commenter stated that EPA does not have authority to provide a sunset provision under the exemption. The commenter further stated that since each model year is planned in advance, eliminating the exemption in 1996 will deprive manufacturers of the time needed to find adequate substitutes. EPA disagrees with this commenter. The statute only calls for an exception to the ban "where no adequate substitute substances (other than a class I or class II substance) are practicable for effectively meeting such Standards." The statutory language obligates EPA to consider integral skin, rigid, or semi-rigid foam. EPA determined that at this time, rigid and semi-rigid foam products do not require an exception; only integral skin requires an exception. Furthermore, the statute clearly states that the exception should only apply "where no adequate substitute substances" can meet the standards. As noted in the NPRM, water-blown foam will be available shortly, and HFC–134a will be available soon thereafter. Therefore, EPA believes that once these alternatives are available, there will be no need for a continuing exception because integral skin products manufactured with class II substances will no longer meet the statute's criteria under section 610(d)(3)(B), since alternatives will be effectively able to meet the safety standards.

One commenter stated that integral skin foams present long-term storage problems. According to this commenter, many automobile manufacturers are employing a just-in-time inventory system. Storage of integral skin foam presents certain difficulties. If HCFCs will not be available to produce integral skin foam replacement parts, the manufacturers may make life-time buys of particular products. The commenter believes that changing the production processes to compensate for different shrinkage rates for foams blown with alternatives could be costly and provide little environmental benefit because only a limited number of replacement parts will be sold. EPA disagrees with this commenter. Where the Agency can reasonably reduce the use of ozone-depleting substances, EPA is providing an environmental benefit. Moreover, the statute states that EPA will provide an exception "where no adequate substitute substance (other than a class I or class II substance) is practicable for effectively meeting such Standards." As EPA discussed in the NPRM, the Federal Motor Vehicle Safety Standards are, for the most part, performance standards. The use of particular materials is generally not specified in the standards in 49 CFR part 571 affected by this rulemaking. EPA stated in the NPRM that industry sources had indicated that alternative blowing agents, including water-blown foam and HFC–134a blown foam, will be available to meet the performance standards shortly. This commenter did not disagree with the future ability of the alternatives to meet the safety standards. Once alternatives are available, integral skin products will no longer meet the statutory criteria to receive an exception under section 610(d)(3)(B). Manufacturers would be able to use the alternative blowing agents to manufacture replacement parts rather than make life-time buys of integral skin products. Therefore, EPA is not revising the provision to exempt integral skin products needed to meet Federal Motor Vehicle Safety Standards to include replacement parts produced after January 1, 1996. Replacement parts placed into initial inventory before January 1, 1996 are exempt under the terms of the final rules (see § 82.65(a)). EPA will consider revisiting the sunset provision for this exception at a future date if the Agency receives a request from the public for extending the exception and if subsequent investigation by EPA determines that adequate substitutes will not be available by the January 1, 1996 date. The Agency will consider extending the exception for an additional period of time as appropriate, if necessary to allow development of adequate substitutes.

A second commenter requested that EPA broaden the provision for integral skin applications to include all instrument panels, armrest, and bolsters in all motorized vehicles. The commenter stated that integral skin purchasers seek long-term product stability. The commenter believes that Congress did not intend to selectively protect the operators and passengers of motor vehicles and not include the operators of trucks, boats, motorized wheelchairs and agricultural tractors; and suggests that Congress intended the definition of "safety" to include all motorized modes of transportation. EPA disagrees with this commenter. If Congress intended for the Agency to consider other transportation safety standards, Congress could have easily stated that EPA should consider all safety standards promulgated by the Department of Transportation. However, Congress referred specifically to "motor vehicle safety" and thereby to a set of regulations that have been promulgated under Section 103 of the National Traffic and Motor Vehicle Safety Act of 1966. Section 103 authorized the National Highway Traffic Safety Administration (NHTSA) to promulgate Federal Motor Vehicle Safety Standards, which have subsequently been published in 49 CFR part 571, and which are specifically mentioned in section 610(d)(3)(B). Consequently, EPA proposed and in this final action is applying the statutory ban on the sale, distribution, or offer of sale or distribution in interstate commerce to all foam components used in motor vehicles, except those made out of integral skin foam and those which qualify as foam insulation products as defined in § 82.62(h), effective January 1, 1994. EPA is exempting integral skin foam made with HCFCs used to meet the appropriate Federal Motor Vehicle Safety Standards promulgated under 49 CFR part 571, under the provisions of section 610(d)(3)(B) from the class II ban on plastic foam products until January 1, 1996. At that time, the exception for HCFC-blown integral skin foam will "sunset." In addition, EPA is exempting existing inventories of integral skin motor vehicle safety products

VOL 58 ISS 249 DEC 30 1993 UMI

manufactured and placed into initial inventory prior to January 1, 1996.

4. Use Of a Class II Substance As A Startup Gas in Foam Production

EPA received one comment concerning the use of class II substances as a startup gas in the production of extruded polyethylene foams. The commenter indicated that potential nonflammable blowing agents are not suitable for the manufacturing of extruded polyethylene foam. The commenter stated that the use of flammable blowing agents during startup conditions presents many difficulties. The foam lines are not at stable operating conditions and friction generates static electricity. The commenter stated that EPA should consider providing an exception for the incidental uses of class II substances as a startup blowing agent where the foam product is pelletized to eliminate most of the class II substance. The commenter urged EPA to allow for the reuse of the startup foam (blown with class II substances) to encourage recycling, because the amount of the class II substance in an end product would likely be de minimis. Section 610(d) relates only to the sale and distribution of products in interstate commerce. Section 610(d) does not regulate the use of blowing agents as startup gases. However, the statute does clearly regulate the potential sale and distribution of the products that are produced with the startup gas used during the startup process. The Agency understands that generally startup gas is not intended to be incorporated into the finished product; however, when a startup gas is no longer being used, it is not immediately eliminated from the stream of production. There may be instances where both an insignificant amount of the startup gas and the blowing agent actually appear in the same end product. Under that scenario, EPA agrees that the class II substance in the startup gas should be viewed as de minimis in nature and products produced with it are not covered by this final action. Therefore, polyethylene products that are not manufactured with class II substances, where class II substances are used solely as startup gases, and therefore may contain incidental amounts of class II substances are not subject to the ban.

C. Temporary Exemptions

1. Existing Inventories

EPA received several comments regarding EPA's proposal to grandfather existing inventories. One commenter stated that there is a proven technology for the destruction of all the products containing or manufactured with a class II substance—incineration. Incineration units can be used to safely destroy products that will be banned under section 610(d). The commenter stated that there are three facilities that utilize high temperature incineration to reduce all HCFCs to carbon dioxide, water, and halogenated salts. The commenter further stated that trial data for HCFC–22 indicates a rate greater than 99.99 percent for the destruction removal efficiency. In addition, the commenter believes that there are sufficient facilities to handle the demand to destroy all existing inventories being grandfathered by this action. EPA applauds the efforts of this commenter; however, EPA is concerned about the lack of wide availability of such facilities. EPA does not have enough information to determine if there are any other organizations that can provide such a service and whether sufficient incineration capacity exists in wide enough distribution throughout the country to allow incineration of all existing inventories otherwise covered by the class II ban. Furthermore, EPA has no means for ensuring that existing inventories would be sent to appropriate incineration facilities. Manufacturers could use another method for destroying existing inventories that would result in the release of HCFCs directly to the atmosphere. Moreover, EPA's proposed exemptions were based on the de minimis rationale for existing inventories. EPA believes that a review of the amounts of ozone-depleting substances allowed to be emitted based on the NPRM is still de minimis and thus, that the exemption is still warranted.

EPA received comment concerning an extension of the date for placing grandfathered products into initial inventory. One commenter believes that EPA should exempt products placed into initial inventories one hundred and eighty days after the date of publication of the final rule. Another comment suggested that the Agency change the date that products need to be placed into initial inventory from December 27, 1993, to December 31, 1993. The commenter believes that for the ease of compliance and enforcement, consistency with the federal-approval exemption, and conformance with the statute, EPA should switch the date. EPA would like to clarify that the exemption for inventories was based on a de minimis rationale; on the other hand, the federal-approval exemption was based on the ability of the federal entities to perform sufficient reviews by January 1, 1994. Ninety days between the date of publication and this exemption's effective date was based on research involving the length of time needed to convert facilities. Modifying that date by four days provides no significant additional environmental impacts. Since grandfathering is not called for by the statute, strict conformance is not an issue. EPA agrees that December 31, 1993, provides a more reasonable date for the manufacturers' compliance and provides an added benefit from an enforcement perspective. EPA had no way of knowing on which day the NPRM would be published and therefore could not predict the exact effective date of this exemption. In light of the proximity of the grandfathering date and the effective date of the ban, EPA believes it is reasonable to revise the exemption to grandfather all products placed into initial inventory by the manufacturers by December 31, 1993.

One commenter stated that EPA should exempt all products placed into inventories before March 27, 1994. The commenter lists the following reasons: legal authority under the *Alabama Power* decision; failure would cause economic hardship for certain manufacturers and distributors; these products would still meet the de minimis test; and it would not cause an adverse effect on stratospheric ozone. A second commenter stated that an extension should be considered because some products require more than ninety days to complete manufacturing. EPA agrees that not every product affected by this ban can be manufactured during the ninety-day time-frame; however, EPA disagrees with these commenters' concerns regarding extensions for the grandfathering provision. EPA believes that the *Alabama Power* decision does provide authority to grandfather certain existing inventories. However, EPA does not believe that within the meaning of section 610(d) there is any basis for considering exempting inventories created beyond the effective date of the self-executing ban. The Agency believes that such an exemption would only encourage additional production of nonessential products. The emissions of HCFCs would not be considered de minimis in nature because the additionally manufactured products would contribute increased emissions to the stratospheric ozone problem. The crux of EPA's reasoning for providing any exemption for existing inventories was that emissions from products already in existence were de minimis. EPA is aware that during the ninety

days provided in the NPRM for alterations of manufacturing processes, some manufacturers may have continued to produce nonessential products that would otherwise have been banned and that will now be exempted; however, that was not the intention of the exemption. The exemption was designed to allow manufacturers the time necessary to convert their facilities from the time they became aware that their products would likely be banned. A further extension would solely allow for continued manufacturing which clearly contradicts Congressional intent. Furthermore, with a self-effectuating statutory ban date of January 1, 1994, EPA believes it cannot legally provide grandfathering for banned products manufactured beyond that date.

One commenter stated that they faced many hurdles regarding their ability to replace HCFCs in replacement parts for their products. The commenter cited difficulties with storing large inventories of certain products, particularly integral skin products for use in meeting automobile safety standards. The commenter requested that EPA allow the sale of replacement parts used to meet these safety standards and made with HCFCs on a permanent basis because the rule should only apply to new products. EPA disagrees with this commenter. Nothing in the statutory language indicates that section 610(d) should not apply to replacement parts which in and of themselves are new products. The statute clearly states that the ban applies to aerosol products, pressurized dispensers, and foam products manufactured with, or containing a class II substance. The sale of a replacement part into interstate commerce is equivalent to the sale of any other product. A replacement part is a product and is sold as a new product when introduced into interstate commerce. The exemptions that EPA has offered for existing inventories, including the exemption for integral skin foams used to meet motor vehicle safety standards, are aimed at protecting the distributor and retailer. If EPA had not included the exemptions, integral skin products manufactured with or containing a class II substance not yet sold to the ultimate consumer (e.g. the user of the end product) would be banned from further sale and distribution in interstate commerce on January 1, 1996, regardless of where that product was in the chain of distribution, even where the product had been placed into initial inventory prior to January 1, 1996.

If manufacturers are concerned about their ability to convert the manufacturing of all components and replacement parts that will be banned after January 1, 1996, the manufacturer may choose to make a lifetime buy of the replacement parts prior to January 1, 1996. Replacement parts and components placed into initial inventory prior to January 1, 1996 will not be subject to the ban.

In many cases producers that have already reformulated their production processes to comply with the class II ban may have inventory either at their facilities or still in the distribution chain. The Food Service and Packaging Institute estimates that the capital expenditures to retrofit equipment have cost their industry more than $10 million. This figure reportedly does not portray the disruption to the product lines and manpower that occurred during the conversion. These manufacturers fully supported EPA's grandfathering provision because it would alleviate the additional burden of recalling stock already sold by the manufacturers and destroying these products.

EPA received one comment from a manufacturer of food service disposable products indicating that, to comply with the class II ban, the manufacturer spent more that $3 million to retrofit their facilities. The conversion away from HCFCs has already been completed. However, the comment points out that hundreds of cases of products that were produced with HCFCs are still awaiting sale in the manufacturer's warehouses, and may still be on the shelves of their customers. This commenter described the grandfather provision as crucial due to the nature of their business.

One commenter, a manufacturer of dusters and noise horns, stated that more than 85 percent of their product line was produced with CFC–12 as recently as 1989. The commenter described their conversion as both "painful" and "costly," yet recognizes the benefits to society. In 1988, the manufacturer used 1,250,000 pounds of class I substances. In 1992, the same manufacturer had reduced the ODP-weighted use of class I and class II substances to 57,000 pounds. This amount will be further reduced for 1993 to approximately 25,000 to 30,000 pounds. Reductions were necessary, in meeting the February 16, 1993, ban on the sale and distribution of products releasing CFCs specifically referred to in the statute and meeting the January 17, 1994, effective date for products EPA found meet the criteria for nonessentiality. The commenter agrees with EPA's determination to treat existing inventory as de minimis. The commenter categorizes EPA's decision as a "very fair method to help business make a smooth transition." The commenter further states that the ninety days to convert was not impossible given that supplies of alternatives were available and that, regardless of the grandfathering provision, manufacturers would need to convert by year's end. EPA agrees with many of the points raised by this commenter.

One commenter, who agrees with EPA's proposed grandfathering provision, requests clarification of the term "initial inventory." The commenter provides an example where the producer of the foam product may not be the same entity as the final producer of the product to be sold. The commenter questions which inventory represents the initial inventory, and suggests that initial inventory should, for foam products, mean the inventory of the manufacturer of the foam itself. EPA agrees that the term initial inventory may require clarification. In this final action EPA clarifies that the term "initial inventory," with regard to the temporary exemptions listed in § 82.65, means that the original product has completed all of its manufacturing processes and is ready for sale by that manufacturer (e.g. the foam is manufactured). That product may be subsequently incorporated into another product by a different manufacturer after purchase. This would not affect the applicability of the exemption.

To continuing selling products after January 1, 1994, the manufacturer or distributor must be able to show, upon request by EPA, that the product was in fact manufactured, and thus placed into initial inventory prior to December 31, 1993. EPA identified shipping forms, lot numbers, manufacturer date stamps or codes, invoices, or the like as records that are normally kept by manufacturers and distributors. The Agency believes this type of information is routinely maintained for several years.

2. Products Requiring Federal Approvals

EPA received three comments regarding the temporary exemptions for products requiring federal approval prior to selling a reformulated product. One commenter states that the proposed thirty-day period for manufacturers to continue to manufacture banned products after being denied federal approval should be reconsidered. The commenter states that thirty days is inconsistent with the ninety days allowed for those that did receive approval to reformulate. Additionally, the commenter believes that the

VOL 58 ISS 249 DEC 30 1993 UMI

manufacturers may not have submitted every possible alternative originally or may have subsequently devised a new potential reformulation. The commenter proposes that the ban should not apply to a manufacturer whose reformulation request is denied, so long as the manufacturer submits another reformulation request within ninety days of receipt of the notice of denial. If the subsequent reformulation is approved, the commenter suggests that the manufacturer should continue to be grandfathered for ninety days after receipt of the approval. If the second request is denied, then so long as another request is submitted, in good faith, within ninety days, again grandfathering should continue. The commenter suggests that the Agency may wish to place a restriction by either limiting the number of submissions by a single company or by limiting the total amount of time that a product can be exempted without having received federal approval. EPA received a second comment indicating that the Agency should allow one hundred and eighty days for products that are denied a federal approval for reformulations to allow the manufacturer to locate a new formulation and reapply for approval to the appropriate federal agency.

EPA believes that in many cases after receiving denial for a reformulation, the manufacturer may be forced to shut down that product line. The time needed to shut down a product line is significantly less than the time required to retool to manufacture the products using an alternative formulation. Therefore, EPA proposed only thirty days for manufacturers that were denied approval for a reformulation. EPA agrees that thirty days may be insufficient, but believes that forty-five days is sufficient time for manufacturers to cease using class II substances, once denial of application for reformulation has been received. Further, EPA agrees that if a manufacturer devises a new formulation, a method for submitting that formulation should be available to that manufacturer. Therefore, in this final rule, EPA is providing a continued temporary exemption if the manufacturer submits a viable new reformulation to the same federal agency within forty-five days of receiving a denial. For the purposes of Section 610(d) only, a viable application means that the application is complete, accurate and has been filed with the appropriate federal agency. If after forty-five days no application has been submitted, the manufacturer can no longer manufacture a banned product. EPA believes forty-five days gives the manufacturer adequate time in which to re-submit an application or phase out a product. EPA disagrees with establishing a limit on the total amount of time a product can be exempted. The time frames associated with federal review processes represent the amount of time necessary for the federal agency to conduct a responsible review of the formulations and determine the acceptability of the formulation under applicable statutes and regulations. The federal agencies cannot expedite their internal processing procedures simply because a formulation would otherwise be subject to the class II ban without compromising the integrity of their own program reviews. In addition, EPA does not believe it is appropriate to limit severely the number of submissions that can be made, if those submissions are made in good faith and represent newly devised formulations; however, EPA believes that without some type of constraint, some manufacturers may perceive this exemption as a way to continually circumvent the ban. Therefore, EPA will review each re-submittal for completeness and accuracy, in conjunction with the appropriate federal entities. These applications must be made in good faith and must represent formulations that could not have been submitted earlier. If the application is deemed to be nonviable, the manufacturer will have forty-five days in which to cease manufacturing the product with a class II substance after being informed that the application is nonviable. EPA will therefore allow forty-five days for a manufacturer to either shutdown or reapply to the same federal agency.

One commenter suggested that the term "federal approval" should also include approval by non-governmental bodies, such as laboratories, if accepted under applicable regulations as meeting federal approval requirements. The commenter further suggested that EPA consider the approval of finished products that incorporate approved products if the finished product cannot be reformulated without federal approval of a particular component. The commenter demonstrated the need to consider such situations with life vests requiring approval by the U.S. Coast Guard. EPA agrees with this commenter with respect to both issues. If the appropriate applications were submitted prior to January 1, 1994, manufacturers that require the approval of both the finished product and a particular component will be grandfathered by this final action until such time as they receive approval or denial. In addition, if the manufacturer can demonstrate that approval by a non-government entity is required under a federal statute or a federal regulation, EPA will consider that situation as equivalent to direct review by the federal agency and use of a class II substance will be grandfathered until ninety days after receipt of approval or forty-five days after denial.

D. Interstate Commerce

EPA received a comment supporting the Agency's proposed definition of interstate commerce. The commenter particularly agreed with the EPA's proposed exclusion for the resale of used products.

EPA received three comments regarding the treatment of products produced solely for export. Two commenters stated that EPA should consider the interpretation the Agency adopted in the regulations promulgated under section 611 (the labeling rule). One commenter referred to the following discussion in the preamble to the final labeling rule: "Section 611 applies to products that are 'introduced into interstate commerce,' but makes no reference to foreign commerce. The Clean Air Act does not define 'interstate commerce.' However, EPA believes that section 611's use of interstate commerce does not include 'foreign commerce' * * * EPA recognizes the competitive disadvantage that U.S. manufacturers would have in the foreign marketplace as a result of having to label" (58 FR 8136, 8154). The commenter further states that there is no Congressional direction to include exports and that including exports could put companies at a competitive disadvantage.

EPA would like to clarify that the statutory language in section 610 and section 611 is markedly different. EPA agrees that Congress did not intend for EPA to require products never *introduced* into interstate commerce to be labeled. Section 610 encompasses all sales and offers for distribution in interstate commerce until the final sale to the ultimate consumer. EPA proposed a definition of interstate commerce and the treatment of exports and imports for the class II ban, consistent with the definition used in the class I ban. This includes products ultimately destined for export if sold in interstate commerce prior to export, and imports if sold in interstate commerce after import. If a manufacturer could demonstrate that their product is manufactured entirely within the borders of one state, that the raw materials and components and labor used to manufacture the product also originate within the same state, and if that product does not enter interstate commerce in any way (e.g. the shipping port is within the same state), EPA would agree that product would not be considered part of interstate commerce and could thus be sold for export.

There are strong policy reasons for the different interpretations of sections 610 and 611. Ozone depletion is a global concern. The United States is a leader among the parties to the Montreal Protocol. Imposing the labeling rule on exports would make little sense however, in that foreign citizens would often be unable to read the English labels, thus rendering them ineffective; and labels would not serve their intended purpose of distinguishing between products containing and those not containing ozone-depleting substances, since foreign-made products containing such substances would not be labeled. To allow U.S. companies to effectively "dump" goods banned in the United States (for purposes of global environmental protection) in foreign countries would defeat the purposes of, and undermine the spirit of, the Montreal Protocol.

EPA received one comment concerning EPA's legal authority to regulate exports. The commenter indicated that EPA could not regulate exports because EPA was not listed in Department of Commerce (DOC) regulations, listing agencies authorized to regulate exports. EPA wishes to clarify that EPA did not in the proposal intend to regulate the foreign commerce aspect of products destined for ultimate export. As explained above, in this final rule, EPA is only regulating the sales in interstate commerce of products that may eventually be exported. If products are not sold in interstate commerce, this rule will have no effect on export of such products. Thus, DOC regulations governing the foreign commerce aspects of exports sales have no reference to this rulemaking. The regulation cited by the commenter, 15 CFR 770.10, is entitled "Exports which are not controlled by the office of export licensing." EPA confirmed with the DOC that this regulation does not in any way limit any agency's independent authority to regulate sales in interstate commerce of products that may ultimately be exported. Further, EPA notes that the listing in § 770.10 is not complete, and that where an agency is authorized by another statute to regulate foreign commerce, it may do so, notwithstanding § 770.10. Although EPA is not in the case of section 610 claiming authority to regulate foreign commerce, EPA is authorized under other statutes such as the Toxic Substances Control Act and the Resource Conservation and Recovery Act to regulate foreign commerce.

EPA received one comment stating that since the statute only authorizes EPA to regulate intrastate commerce, EPA cannot require the seller of products in intrastate commerce to provide proof that the products are not part of intra state commerce. EPA believes that few products will actually meet the definition of intrastate commerce; however, in cases where clearly a particular product is sold within intrastate commerce, the sale and distribution of that product will not be subject to this rule. Because EPA believes that so few products could meet the definition of interstate commerce, EPA believes that where it is appropriate within the scope of this rulemaking to question whether a person selling or distributing a particular product is falsely asserting that the product is exempt based on intrastate commerce, the Agency is justified in requiring verification of the product's status. Therefore, EPA believes it has authority to request verification where the Agency questions the status of a product that a person claims is exempt based on intrastate commerce.

EPA received one comment stating that a retailer may not be aware of when the product was manufactured and, therefore, should not be held liable for any prior sales. The commenter further stated that "interstate commerce" is tied to each event in the chain of sales. Only where a sale crosses a state line should that sale be subject to the ban. EPA disagrees with this commenter. EPA's interpretation of interstate commerce does not include products that were manufactured, distributed, and/or sold exclusively within a particular state, nor products where the components, equipment, and labor that went into manufacturing, distributing, selling, and/or offering to sell or distribute such a product originated within that state as well. Furthermore, the sale of the product includes every sale up to and including the sale to the ultimate consumer, and to be considered not part of interstate commerce all of those sales must take place without ever crossing a state line. If any phase of manufacture occurs in interstate commerce the product is considered "in" interstate commerce at any stage in its production. Therefore, the sale and distribution of banned products in interstate commerce is not legal, even when the one particular sale takes place within the same state, unless the product is sold entirely in intrastate commerce as described above.

E. Verification and Public Notice Requirements for Cleaning Fluids for Non-Commercial Electronic and Photographic Equipment

EPA received several comments asking for clarification regarding the exemption for lubricants, coatings, or cleaning fluids using a class II substance for solvent purposes and the requirement to sell aerosol cleaning fluids for electronic and photographic equipment to only commercial users. Many commenters found these two requirements to be either confusing or contradictory.

Section 610(b)(2) required EPA to ban the sale of chlorofluorocarbon-containing cleaning fluids for electronic and photographic equipment to non-commercial users. Consequently, EPA, in the class I ban, included a ban on the sale, distribution, or offer of sale or distribution of chlorofluorocarbon-containing cleaning fluids for electronic and photographic equipment to non-commercial users. As a result, there is no remaining chlorofluorocarbon which legally could be substituted for a class II substance in non-commercial cleaning fluids for electronic and photographic equipment.

The class II ban restricts the sale of aerosol products and pressurized dispensers; therefore, cleaning fluids in a non-pressurized dispenser are not subject to the ban. However, in order to continue selling aerosol cleaning fluids that contain a class II substance, for electronic and photographic equipment where flammability or worker safety justifies an exemption, the only alternative must be the legal use of a class I substance. For aerosol cleaning fluids used to clean electronic and photographic equipment sold to commercial users, such a legal use does exist, and EPA proposed an exemption under the class II ban, only for commercial uses. The class I ban and statute requires that these cleaning fluids be restricted to commercial users only; therefore, a verification requirement is necessary to ensure these products are not sold for non-commercial uses.

V. Summary of Changes From Proposal

This final action promulgates regulations under section 610. Several additional exemptions have been provided under the class II ban and revisions have been made to the class I ban.

Under § 82.65(c), EPA has changed the length of time a product can be manufactured after being denied federal approval from 30 days to 45 days. EPA also added a provision to allow for the

VOL 58 ISS 249 DEC 30 1993 UMI

submission of new applications to the same federal agency, within forty-five days of denial.

Under §§ 82.66(d)(2)(vii), 82.66(d)(2)(viii) and 82.66(d)(2)(x), EPA has added exceptions for the use of CFC–12 as a propellant in various uses.

Under §§ 82.70(a)(2)(iv) and 82.70(a)(2)(v), EPA has added an exemption for propellant uses of certain class II substances.

EPA has added § 82.70(a)(2)(vi), an exception from the class II ban for document preservation sprays containing HCFC–141b and HCFC–22 used under specific circumstances.

EPA has added § 82.70(a)(2)(vii), an exception from the class II ban for commercial portable fire extinguishers containing class II substances as fire extinguishants where no alternative other than halons are available.

VI. Effective Dates

This final rule makes it unlawful to sell, distribute, or offer to sell or distribute, in interstate commerce, the products identified as nonessential in 40 CFR 82.70(a), 40 CFR 82.70(b) and 40 CFR 82.70(c) effective January 1, 1994. In addition, this final rule bans the sale, distribution, or offer of sale or distribution, in interstate commerce, of the products identified as nonessential in 40 CFR 82.70(c)(ii) effective January 1, 1996.

EPA has authority under 5 U.S.C. 553(d)(1)(iii) to expedite the effective date of a rulemaking. While generally EPA must provide thirty days notice, in cases involving a substantive rule which grants or recognizes an exemption or relieves a restriction and "as otherwise provided by the agency for good cause found and, published with the rule," an agency may accelerate the effective date of a rule. Without accelerating the effective date of this rule, the statutory ban will become effective on, January 1, 1994, inadvertently banning products that meet the statutory criteria for exemptions and that will only be exempted after this rule is effective. Since this rule grants and recognizes an exemption, EPA believes that there is good cause to accelerate the effective date of this rule to coincide with the effective statutory date of the ban on class II products. Therefore, the effective date for this rulemaking will be January 1, 1994. EPA would like to clarify that while the class II ban is effective January 1, 1994, this action does not revise the effective dates contained in the class I ban. The ban on the sale, distribution, or offer of sale or distribution, in interstate commerce of the products specifically mentioned in § 82.66 (a) and (b) was effective on February 16, 1993. The ban on the sale or distribution of products identified in § 82.66 (c) and (d) is effective on January 17, 1994.

VII. Summary of Supporting Analyses

A. Executive Order 12866

Under Executive Order 12866 (58 FR 51735, October 4, 1994), the Agency must determine whether this regulatory action is "significant" and therefore subject to OMB review and the requirements of the Executive Order. The Order defines "significant" regulatory action as one that is likely to lead to a rule that may:

(1) Have an annual effect on the economy of $100 million or more, or adversely and materially affect a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impact of entitlement, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

It has been determined that this rule is not a "significant regulatory action" under the terms of Executive Order 12866 and is therefore not subject to OMB review under the executive order OMB and EPA have agreed with this determination.

EPA has prepared two background documents (see references Background Document on Foam Products Made With Class II Substances and Background Document on Aerosol Products and Pressurized Dispensers Containing Class II Substances in Docket A–93–20) which include a qualitative study of the economic impact of this regulation for each product identified as nonessential and prohibited from sale or distribution.

Most foam is produced by large businesses. This is due to high market entry barriers, including the need for large capital investments. However, the class II ban affects all the groups involved in the sale and distribution of the foam products; therefore, other entities besides the producers, including small retail or distribution businesses, are involved. In many cases, foam represents one component of a finished product that is produced by a small business. In addition, the finished products are often sold by small retail business operations. EPA has researched the numbers and types of firms that manufacture and sell foam products affected by the class II ban, and the potential economic impact the class II ban may have on these entities.

EPA believes that the class II ban will have no economic impact for the manufacturers of open cell rigid polyurethane foam, because EPA is not aware of any manufacturers of this product that currently use HCFCs. The class II ban is likely to have minimal impact on the manufacturers of flexible molded foam since information indicates that most have moved directly from CFCs to methylene chloride and water formulations. Most of the production of semi-rigid integral skin foam relies on the use of halocarbon blowing agents. However, the exemption for foams used to meet automotive safety standards will significantly alleviate the impact the ban will have on these products. Most other types of polyurethane foams are made with HCFCs. Information indicates that approximately 85 to 90 percent of extruded polystyrene sheet foam does not rely on HCFCs. Companies that were still using HCFCs are required to switch blowing agents; thus, these companies are affected by the ban. EPA does not believe the ban will have any impact on polyethylene bead foam, since information available to EPA indicates the manufacturers of this product have already switched to hydrocarbons. EPA is aware of at least six extruded polyethylene manufacturers that have converted to hydrocarbons; however, as discussed earlier, some of the other producers of extruded polyethylene foam, not used solely as pipe wrap, will be significantly affected. EPA believes the ban will have no impact on expanded polypropylene bead manufacturers since these manufacturers have converted to hydrocarbons. However, the sole American producer of extruded polypropylene may incur significant costs. Further details concerning the results of this research appear in the Background Document on Foam Products Made With Class II Substances.

Many manufacturers of aerosol products could be characterized as small businesses. EPA believes that few companies that primarily manufacture aerosol products have more than 100 employees. However, several facilities are actually part of larger companies that produce a range of other products. In both cases, the entire product line produced by the manufacturers may not consist of products containing class II substances. Distributors and retailers may vary considerably in size and product line. EPA has researched the numbers and types of firms that manufacture and sell aerosol products and pressurized dispensers affected by the class II ban, and the potential economic impact the class II ban may have on these entities.

EPA has examined a number of aerosol products affected by the class II ban. This research included both products that could meet the narrow criteria for receiving exceptions established by Congress in section 610(d), and those that do not meet the criteria. Much of the information collected by EPA is qualitative and anecdotal in nature but is sufficiently conclusive for the Agency to be able to obtain a reasonable picture of the overall impact. Examples of these findings are discussed below.

EPA is aware of formulations for document preservation sprays that do not use class I or class II substances. However, at least one major manufacturer has tested and is now using class II substances as both propellants and solvents. Therefore, while EPA is providing an exemption for certain propellant and solvent uses in this product, the class II ban in limited circumstances will affect this product. Many pesticide products using class II substances will be affected by the class II ban. However, the impacts will be reduced because of the provision allowing manufacturers that require federal approval for reformulation for a product or approval of a specific substitute product to continue to sell or distribute, or offer for sale or distribution in interstate commerce, their existing formulations until ninety days after receiving all appropriate federal agency approvals or forty-five days after denial. The provision will also provide relief for other products requiring approval prior to reformulation. Manufacturers of dusters and freezants that have continued to use HCFC formulations will be affected by the class II ban; however, companies that have already moved to alternatives such as carbon dioxide or HFCs will not be affected. Many manufacturers of defensive sprays also will be significantly affected by the class II ban. Further details concerning the results of this research appear in the Background Document on Aerosol Products and Pressurized Dispensers Containing Class II Substances.

EPA has considered the benefits that can be attributed to the class II ban. In order to calculate the benefits, EPA considered the total annual consumption of HCFCs in products that will be banned. EPA estimates that the annual HCFC consumption in foam products that will be banned is approximately 27.31 million pounds. The annual HCFC consumption in aerosol products that will be banned is approximately 11.8 million pounds. EPA attributes all of the avoided emissions and corresponding benefits to the class II ban. EPA believes that if the self-executing ban was not included in the Clean Air Act Amendments, the current amount of HCFCs used in the foam and aerosol sectors would have been greater. Furthermore, without the ban, these annual emissions actually would continue to increase, especially during the next several years and following the phaseout of class I substances. These increases would have leveled off and only begun to decrease as the phaseout dates for HCFCs approached (2003–2030). EPA estimates the benefits for this rule range between $148 million and $604 million when using a 2 percent discount rate, and between $107 million and $438 million when using a 7 percent discount rate.

EPA requested comment on the overall benefits of the class II ban and the costs the class II ban will have on affected businesses. In particular, EPA requested comment on the size and diversity of the companies affected by the ban, the potential costs associated with the class II ban, and the impact the class II ban will have on small entities. In addition, EPA requested comment on the cost and benefits associated with the proposed regulations. Specifically, EPA requested comment on the offsetting beneficial effects that the proposed exceptions, grandfathering of existing inventories, and grandfathering for products waiting for required federal approvals, will have on affected businesses. EPA did not receive comments regarding the overall impacts of the ban; however, EPA did receive comments concerning the grandfathering provisions and the costs associated with retrofitting facilities to meet the ban. The Food Service and Packaging Institute estimated that their members spent more that $10 million on capital costs to retrofit existing equipment. This number does not include the costs of disrupting normal operations while these retrofits occurred. One member alone spent more than $3 million to complete their capital costs for retrofits. This member believes that the cost of recalling and destroying products that were already produced with class II substances prior to the member's conversions, would cost a significantly larger sum, while producing no added environmental benefits. Several other commenters that have already completed converting to non HCFC-formations, such as one producer of dusters and noise horns, indicated that the grandfathering provisions represent a fair method to help businesses make a smooth transition. This manufacturer further stated that the key costs of the ban involve the short time frames for facilities' conversions and the need to change the art work that appears on the aerosol cans, converting the packaging to handle the properties of all the new substitutes, and educating the customers. This commenter believes that their organization spent $500,000 to meet both the class I and class II bans. An additional $200,000 was also incurred due to the tax on CFC.

The statutory ban is self-executing. If EPA did not promulgate regulations to create exemptions, the ban would impose significantly higher costs. Furthermore, without the temporary exemptions for existing inventories and products requiring federal approval prior to reformulation, the statutory ban would impose significantly higher costs on the distributors and retailers of banned products. The rule creates exemptions and clarifies the exceptions provided by the statute, therefore lessening the burden of the self-executing ban imposed by the statute.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act, 5 U.S.C. 601–602, requires that Federal agencies examine the impacts of their regulations on small entities. Under 5 U.S.C. 604(a), whenever an agency is required to publish a general notice of proposed rulemaking, it must prepare and make available for public comment an initial regulatory flexibility analysis (RFA). Such an analysis is not required if the head of an agency certifies that a rule will not have a significant economic impact on a substantial number of small entities, pursuant to 5 U.S.C. 605(b).

EPA believes that any impact that this regulation will have on certain small entities is unavoidable given the straightforward nature of the statutory provision this regulation implements. An examination of the impacts on small entities was discussed in the background documents accompanying the NPRM and has since been updated to include information supplied by comments. Revised versions of the background documents are contained in the docket. The background document assesses the impact this regulation may have on small entities and provides examples of such impacts. In general, the impact of the ban is overall minimal; and in particular, the impact of this rule, according to the information

VOL 58 ISS 249 DEC 30 1993 UMI

supplied by commenters, will serve to relieve some of the burden the self-executing ban places on certain products.

C. Paperwork Reduction Act

Any information collection requirements in a rule must be submitted for approval to the Office of Management and Budget (OMB) under the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* Because no informational collection requirements were proposed and none are being required by today's action, EPA has determined that the Paperwork Reduction Act does not apply to this rulemaking and no Information Collection Request document has been prepared.

VIII. Judicial Review

Under Section 307(b)(1) of the Act, EPA finds that these regulations are of national applicability. Accordingly, judicial review of this action is available only by the filing of a petition for review in the United States Court of Appeals for the District of Columbia Circuit within sixty days of publication of this action in the **Federal Register**. Under section 307(b)(2), the requirements of this rule may not be challenged later in judicial proceedings brought to enforce those requirements.

Title 40, Code of Federal Regulations, part 82, is amended as follows:

PART 82—PROTECTION OF STRATOSPHERIC OZONE

1. The authority citation for part 82 continues to read as follows:

Authority: 42 U.S.C. 7414, 7601, 7671–7671q.

2. Subpart C is revised to read as follows:

Subpart C—Ban on Nonessential Products Containing Class I Substances and Ban on Nonessential Products Containing or Manufactured With Class II Substances

Sec.

82.60 Purpose.
82.62 Definitions.
82.64 Prohibitions.
82.65 Temporary exemptions.
82.66 Nonessential Class I Products and Exceptions.
82.68 Verification and Public Notice Requirements.
82.70 Nonessential Class II Products and Exceptions.

§ 82.60 Purpose.

The purpose of this subpart is to implement the requirements of sections 608 and 610 of the Clean Air Act as amended in 1990 on emission reductions and nonessential products.

§ 82.62 Definitions.

For purposes of this subpart:

(a) *Chlorofluorocarbon* means any substance listed as Class I group I or Class I group III in 40 CFR part 82, appendix A to subpart A.

(b) *Commercial,* when used to describe the purchaser of a product, means a person that uses the product in the purchaser's business or sells it to another person and has one of the following identification numbers:

(1) A federal employer identification number;

(2) A state sales tax exemption number;

(3) A local business license number; or

(4) A government contract number.

(c) *Consumer,* when used to describe a person taking action with regard to a product, means the ultimate purchaser, recipient or user of a product.

(d) *Distributor,* when used to describe a person taking action with regard to a product means:

(1) The seller of a product to a consumer or another distributor; or

(2) A person who sells or distributes that product in interstate commerce for export from the United States.

(e) *Product* means an item or category of items manufactured from raw or recycled materials which is used to perform a function or task.

(f) *Release* means to emit into the environment during the manufacture, use, storage or disposal of a product.

(g) *Class II Substance* means any substance designated as class II in 40 CFR part 82, appendix B to subpart A.

(h) *Foam Insulation Product,* when used to describe a product containing or consisting of plastic foam, means a product containing or consisting of the following types of foam:

(1) Closed cell rigid polyurethane foam;

(2) Closed cell rigid polystyrene boardstock foam;

(3) Closed cell rigid phenolic foam; and

(4) Closed cell rigid polyethylene foam when such foam is suitable in shape, thickness and design to be used as a product that provides thermal insulation around pipes used in heating, plumbing, refrigeration, or industrial process systems.

(i) *Hydrochlorofluorocarbon* means any substance listed as class II in 40 CFR part 82, appendix B to subpart A.

(j) *Owner of a boat or marine vessel* means any person who possesses a title, registration or other documentation that indicates that the person presenting this documentation is in possession of a marine vessel as defined in 33 CFR part 177.

(k) *Owner of a noncommercial aircraft* means any person who possesses a title, registration or other documentation that indicates that the person presenting this documentation is in possession of a noncommercial aircraft.

§ 82.64 Prohibitions.

(a) Effective February 16, 1993, no person may sell or distribute, or offer to sell or distribute, in interstate commerce any of the products identified as being nonessential in § 82.66(a).

(b) Effective February 16, 1993, no person may sell or distribute, or offer to sell or distribute, in interstate commerce any of the products specified in § 82.66(b) to a person who does not provide proof of being a commercial purchaser, as defined under § 82.62.

(c) Effective January 17, 1994, no person may sell or distribute, or offer to sell or distribute, in interstate commerce any of the products identified as being nonessential in § 82.66(c) or § 82.66(d).

(d) Except as permitted under § 82.65, effective January 1, 1994, no person may sell or distribute, or offer for sale or distribution, in interstate commerce any product identified as being nonessential in § 82.70(a) or § 82.70(c).

(e) Except as permitted under § 82.65, effective January 1, 1994, no person may sell or distribute, or offer to sell or distribute, in interstate commerce any of the products specified in § 82.70(b) to a person who does not provide proof of being a commercial purchaser, as defined under § 82.62.

(f) Except as permitted under § 82.65(d), effective January 1, 1996, no person may sell or distribute, or offer for sale or distribution, in interstate commerce any product identified as being nonessential in § 82.70(c)(ii).

(g) It is a violation of this subpart to sell or distribute, or offer for sale or distribution, products effected by the provisions of § 82.68 if the seller knew or should have known that the purchaser was purchasing the product for a prohibited application.

§ 82.65 Temporary exemptions.

(a) Any person may sell or distribute, or offer to sell or distribute, in interstate commerce, at any time, any products specified as nonessential in § 82.70 which are manufactured and placed into initial inventory by December 31, 1993.

(b) Any person may sell or distribute, or offer to sell or distribute, in interstate commerce, at any time, any products specified as nonessential in § 82.70 which are manufactured and placed into initial inventory within the date 90 days after the effective date of any federal approvals required for product reformulation, where application for the required approval was timely and properly submitted to the approving federal agency prior to January 1, 1994.

(c)(1) Any person may sell or distribute or offer to sell or distribute, in interstate commerce, at any time, any products specified as nonessential in § 82.70 which are manufactured and placed into initial inventory within 45 days after the receipt of denial by any federal agency of an application for reformulation where initial application for the required approval was timely and properly submitted to the approving federal agency prior to January 1, 1994.

(2) If, within 45 days of receipt of a denial of an application for reformulation, a person submits a new viable application for federal approval of a reformulation, that person may continue to sell and distribute, or offer to sell and distribute until 45 days of denial of that application.

(d) Any person may sell or distribute, or offer to sell or distribute, in interstate commerce, at any time, any integral skin foam utilized to provide for motor vehicle safety in accordance with Federal Motor Vehicle Safety Standards, which are manufactured and placed into initial inventory prior to January 1, 1996.

(e) Any person selling or distributing, or offering to sell or distribute, any product specified in this section after January 1, 1994, or January 1, 1996 for subparagraph (d), must retain proof that such product was manufactured and placed into initial inventory before the relevant date specified in this section. Such proof may take the form of shipping forms, lot numbers, manufacturer date stamps, invoices or equivalent business records.

(f) Any person may sell or distribute, or offer to sell or distribute, in interstate commerce, any aircraft pesticide containing class I until an alternative aircraft pesticide containing class II is available in interstate commerce.

§ 82.66 Nonessential Class I Products and Exceptions.

The following products which release a Class I substance (as defined in 40 CFR part 82, appendix A to subpart A) are identified as being nonessential, and subject to the prohibitions specified under § 82.64—

(a) Any plastic party streamer or noise horn which is propelled by a chlorofluorocarbon, including but not limited to—

(1) String confetti;

(2) Marine safety horns;

(3) Sporting event horns;

(4) Personal safety horns;

(5) Wall-mounted alarms used in factories or other work areas; and

(6) Intruder alarms used in homes or cars.

(b) Any cleaning fluid for electronic and photographic equipment which contains a chlorofluorocarbon:

(1) Including but not limited to liquid packaging, solvent wipes, solvent sprays, and gas sprays; and

(2) Except for those sold or distributed to a commercial purchaser.

(c) Any plastic flexible or packaging foam product which is manufactured with or contains a chlorofluorocarbon;

(1) Including but not limited to:

(i) Open cell polyurethane flexible slabstock foam;

(ii) Open cell polyurethane flexible molded foam;

(iii) Open cell rigid polyurethane poured foam;

(iv) Closed cell extruded polystyrene sheet foam;

(v) Closed cell polyethylene foam; and

(vi) Closed cell polypropylene foam.

(2) Except—flexible or packaging foam used in coaxial cable

(d) Any aerosol product or other pressurized dispenser, other than those banned in § 82.64(a) or § 82.64(b), which contains a chlorofluorocarbon,

(1) Including but not limited to household, industrial, automotive and pesticide uses,

(2) Except—

(i) Medical devices listed in 21 CFR 2.125(e);

(ii) Lubricants for pharmaceutical and tablet manufacture;

(iii) Gauze bandage adhesives and adhesive removers;

(iv) Topical anesthetic and vapocoolant products;

(v) Lubricants, coatings or cleaning fluids for electrical or electronic equipment, which contain CFC–11, CFC–12, or CFC–113 for solvent purposes, but which contain no other CFCs;

(vi) Lubricants, coatings or cleaning fluids used for aircraft maintenance, which contain CFC–11 or CFC–113 as a solvent, but which contain no other CFCs;

(vii) Mold release agents used in the production of plastic and elastomeric materials, which contain CFC–11 or

CFC–113 as a solvent, but which contain no other CFCs, and/or mold release agents that contain CFC–12 as a propellant, but which contain no other CFCs;

(viii) Spinnerette lubricant/cleaning sprays used in the production of synthetic fibers, which contain CFC–114 as a solvent, but which contain no other CFCs, and/or spinnerette lubricant/cleaning sprays which contain CFC–12 as a propellant, but which contain no other CFCs;

(ix) Containers of CFCs used as halogen ion sources in plasma etching;

(x) Document preservation sprays which contain CFC–113 as a solvent, but which contain no other CFCs, and/or document preservation sprays which contain CFC–12 as a propellant, but which contain no other CFCs, and which are used solely on thick books, books with coated or dense paper and tightly bound documents; and

(xi) Red pepper bear repellent sprays which contain CFC–113 as a solvent, but which contain no other CFCs.

§ 82.68 Verification and public notice requirements.

(a) Effective February 16, 1993, any person who sells or distributes any cleaning fluid for electronic and photographic equipment which contains a chlorofluorocarbon must verify that the purchaser is a commercial entity as defined in § 82.62. In order to verify that the purchaser is a commercial entity, the person who sells or distributes this product must request documentation that proves the purchaser's commercial status by containing one or more of the commercial identification numbers specified in § 82.62 (b). The seller or distributor must have a reasonable basis for believing that the information presented by the purchaser is accurate.

(b) Effective February 16, 1993, any person who sells or distributes any cleaning fluid for electronic and photographic equipment which contains a chlorofluorocarbon must prominently display a sign where sales of such product occur which states:

It is a violation of federal law to sell, distribute, or offer to sell or distribute, any chlorofluorocarbon-containing cleaning fluid for electronic and photographic equipment to anyone who is not a commercial user of this product. The penalty for violating this prohibition can be up to $25,000 per sale. Individuals purchasing such products must present proof of their commercial status in accordance with § 82.68(a).

(c) Effective January 1, 1994, any person who sells or distributes any aerosol or pressurized dispenser of cleaning fluid for electronic and photographic equipment which contains a class II substance must verify that the purchaser is a commercial entity as defined in § 82.62(b). In order to verify that the purchaser is a commercial entity, the person who sells or distributes this product must request documentation that proves the purchaser's commercial status by containing one or more of the commercial identification numbers specified in § 82.62(b).

(d) Effective January 1, 1994, any person who sells or distributes any aerosol or other pressurized dispenser of cleaning fluid for electronic and photographic equipment which contains a class II substance must prominently display a sign where sales of such product occur which states:

It is a violation of federal law to sell, distribute, or offer to sell or distribute, any aerosol hydrochlorofluorocarbon-containing cleaning fluid for electronic and photographic equipment to anyone who is not a commercial user of this product. The penalty for violating this prohibition can be up to $25,000 per unit sold. Individuals purchasing such products must present proof of their commercial status in accordance with § 82.68(c).

(e) Effective January 1, 1994, in order to satisfy the requirements under § 82.68 (b) and (d), any person who sells or distributes cleaning fluids for electronic and photographic equipment which contain a class I substance and those aerosol or pressurized dispensers of cleaning fluids which contain a class II substance, may prominently display one sign where sales of such products occur which states:

It is a violation of federal law to sell, distribute, or offer to sell or distribute, any chlorofluorocarbon-containing cleaning fluid for electronic and photographic equipment or aerosol hydrochlorofluorocarbon-containing cleaning fluid for electronic and photographic equipment to anyone who is not a commercial user of this product. The penalty for violating this prohibition can be up to $25,000 per unit sold. Individuals purchasing such products must present proof of their commercial status in accordance with 40 CFR 82.68(a) or 82.68(c).

(f) Effective January 1, 1994, any person who sells or distributes any portable fire extinguisher containing a class II substance must prominently display a sign where sales of such products occur; or in cases where the purchaser does not physically come in contact with the point of sale, written notification must be given. This notification must state: "It is a violation of federal law to sell portable fire extinguishers containing hydrochlorofluorocarbons to anyone, *except* for use in applications where necessary to extinguish fire efficiently without irreparably damaging the equipment or area being protected or where the use of other alternatives can cause a hazard to persons in the area. The penalty for violating this prohibition can be up to $25,000 per unit sold. Individuals purchasing such products must present proof of their commercial status in accordance with 40 CFR 82.68(a), or of ownership of a marine vessel or boat in accordance with 40 CFR 82.62(j), or of ownership of a noncommercial aircraft in accordance with 40 CFR 82.62(k)." Written notification may by placed on sales brochures, order forms, invoices and the like.

(g) Effective January 1, 1994, any person who sells or distributes any portable fire extinguisher which contains a class II substance must verify that the purchaser is a commercial entity as defined in § 82.62(b) or is the owner of a marine vessel or boat in accordance with § 82.62(j) or the owner of a noncommercial aircraft in accordance with § 82.62(k). In order to verify that the purchaser is a commercial entity, the person who sells or distributes this product must be presented with documentation that proves the purchaser's commercial status by containing one or more of the commercial identification numbers specified in § 82.62(b). In order to verify that the purchaser is the owner of a marine vessel or boat, the person who sells or distributes this product must be presented with documentation specified in § 82.62(j) that proves the purchaser's status as the owner of a marine vessel or boat. In order to verify that the purchaser is in ownership of a noncommercial aircraft, the person who sells or distributes this product must be presented with documentation specified in § 82.62(k) that proves the purchaser's status as the owner of a noncommercial aircraft by containing one or more of the identification information specified in § 82.62(k). The seller or distributor must have a reasonable basis for believing that the information presented by the purchaser is accurate.

(h) Effective January 1, 1994, any person who sells or distributes any mold release agents containing a class II substance as a propellant must provide written notification to the purchaser prior to the sale that "It is a violation of federal law to sell mold release agents containing hydrochlorofluorocarbons as propellants to anyone, except for use in applications where no other alternative except a class I substance is available. The penalty for violating this prohibition can be up to $25,000 per unit sold." Written notification may be placed on sales brochures, order forms, invoices and the like.

(i) Effective January 1, 1994, any person who sells or distributes any wasp and hornet spray containing a class II substance must provide written notification to the purchaser prior to the sale that "it is a violation of federal law to sell or distribute wasp and hornet sprays containing hydrochlorofluorocarbons as solvents to anyone, *except* for use near high-tension power lines where no other alternative except a class I substance is available. The penalty for violating this prohibition can be up to $25,000 per unit sold." Written notification may be placed on sales brochures, order forms, invoices and the like.

§ 82.70 Nonessential Class II products and exceptions.

The following products which release a class II substance (as designated as class II in 40 CFR part 82, appendix B to subpart A) are identified as being nonessential and the sale or distribution of such products is prohibited under § 82.64(d), (e), or (f)—

(a) Any aerosol product or other pressurized dispenser which contains a class II substance:

(1) Including but not limited to household, industrial, automotive and pesticide uses;

(2) Except—

(i) Medical devices listed in 21 CFR 2.125(e);

(ii) Lubricants, coatings or cleaning fluids for electrical or electronic equipment, which contain class II substances for solvent purposes, but which contain no other class II substances;

(iii) Lubricants, coatings or cleaning fluids used for aircraft maintenance, which contain class II substances for solvent purposes but which contain no other class II substances;

(iv) Mold release agents used in the production of plastic and elastomeric materials, which contain class II substances for solvent purposes but which contain no other class II substances, and/or mold release agents that contain HCFC–22 as a propellant where evidence of good faith efforts to secure alternatives indicates that, other than a class I substance, there are no suitable alternatives;

(v) Spinnerette lubricants/cleaning sprays used in the production of synthetic fibers, which contain class II substances for solvent purposes and/or contain class II substances for propellant purposes;

(vi) Document preservation sprays which contain HCFC–141b as a solvent, but which contain no other class II substance; and/or which contain HCFC–22 as a propellant, but which contain no other class II substance and which are used solely on thick books, books with coated, dense or paper and tightly bound documents;

(vii) Portable fire extinguishing equipment sold to commercial users, owners of marine vessels or boats, and owners of noncommercial aircraft that contains a class II substance as a fire extinguishant where evidence of good faith efforts to secure alternatives indicate that, other than a class I substance, there are no suitable alternatives; and

(viii) Wasp and hornet sprays for use near high-tension power lines that contain a class II substance for solvent purposes only, but which contain no other class II substances.

(b) Any aerosol or pressurized dispenser cleaning fluid for electronic and photographic equipment which contains a class II substance, except for those sold or distributed to a commercial purchaser.

(c) Any plastic foam product which contains, or is manufactured with, a class II substance,

(1) Including but not limited to household, industrial, automotive and pesticide uses,

(2) Except—

(i) Any foam insulation product, as defined in § 82.62(h); and

(ii) Integral skin foam utilized to provide for motor vehicle safety in accordance with Federal Motor Vehicle Safety Standards until January 1, 1996, after which date such products are identified as nonessential and may only be sold or distributed or offered for sale or distribution in interstate commerce in accordance with § 82.65(d).

Protection of Stratospheric Ozone; Final Rule

VOL 58 ISS 249 DEC 30 1993 UMI

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 82

[FRL–4619–9]

Protection of Stratospheric Ozone

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rulemaking.

SUMMARY: In this document EPA is promulgating regulations to amend the Class I Nonessential Products Ban published in the **Federal Register** of January 15, 1993, and promulgated under section 610(b) of the Clean Air Act, as amended. This action is being undertaken by EPA in order to exempt certain replacement parts that were placed into initial inventory prior to April 16, 1992. The substances affected by this proposed rulemaking include chlorofluorocarbons (CFCs). This action will provide relief for manufacturers, distributors, and retailers of replacement parts that were previously designed and manufactured for specific product models and that are no longer being produced.

EFFECTIVE DATE: This action will become effective on February 28, 1994 unless EPA is notified by January 31, 1994 that any person wishes to submit adverse comment. Should EPA receive such notice, EPA will publish one subsequent notice in the **Federal Register** to withdraw this final action and another notice proposing this action and requesting comments.

ADDRESSES: Comments and materials supporting this rulemaking are contained in Public Docket No. A–91–39, Waterside Mall (Ground Floor) Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460 in room M–1500. Dockets may be inspected from 8:30 a.m. until 12 noon, and from 1:30 p.m. until 3 p.m., Monday through Friday. A reasonable fee may be charged for copying docket materials. Those wishing to notify EPA of their intent to submit adverse comments on this rule should contact Cynthia Newberg, Program Implementation Branch, Stratospheric Protection Division, Office of Atmospheric Programs, Office of Air and Radiation (6205–J), 401 M Street, SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Cynthia Newberg, Program Implementation Branch, Stratospheric Protection Division, Office of Atmospheric Programs, Office of Air and Radiation (6205–J), 401 M Street, SW., Washington, DC 20460. (202) 233–9729. The Stratospheric Ozone Information Hotline at 1–800–296–1996 can also be contacted for further information.

SUPPLEMENTARY INFORMATION: The contents of this preamble are listed in the following outline:

I. Class I Nonessential Products Ban
II. Today's Revisions to the Class I Nonessential Products Ban
III. Effective Dates
IV. Summary of Supporting Analysis
A. Executive Order 12866
B. Regulatory Flexibility Act
C. Paperwork Reduction Act

I. Class I Nonessential Products Ban

Title VI of the Clean Air Act as amended in 1990 (the Act), divides ozone-depleting chemicals into two distinct classes. Class I is comprised of chlorofluorocarbons (CFCs), halons, carbon tetrachloride and methyl chloroform. Class II is comprised of hydrochlorofluorocarbons (HCFCs). (See listing notice January 22, 1991; 56 FR 2420.) Section 610(b) requires EPA to promulgate regulations that "identify nonessential products that release class I substances into the environment (including any release occurring during manufacture, use, storage, or disposal) and prohibit any person from selling or distributing any such product, or offering any such product for sale or distribution, in interstate commerce." The statute requires that at a minimum, EPA must ban the sale and distribution of CFC-propelled plastic party streamers and noise horns, and restrict the sale and distribution of CFC-containing cleaning fluids for electronic and photographic equipment to commercial users. Final regulations implementing the Class I Nonessential Products Ban were published in the **Federal Register** on January 15, 1993 (58 FR 4768).

In developing regulations to implement the class I ban under section 610 (a), (b) and (c), EPA took into consideration the statutory prohibition required by section 610(d) on products containing or manufactured with class II substances. Section 610(d) provides for a self-executing ban of certain products made with class II substances that becomes effective on January 1, 1994. Section 610(d) bans the sale or distribution, or offer for sale or distribution, in interstate commerce of "any aerosol product or other pressurized dispenser which contains a class II substance;" and "any plastic foam product which contains, or is manufactured with, a class II substance." Section 610(d) provides limited criteria for granting exemptions to the Class II Nonessential Products Ban. The Notice Of Proposed Rulemaking (NPRM) implementing the class II ban was published in the **Federal Register** on September 27, 1993 (58 FR 50463).

During the development of the class I ban, EPA was concerned about the potential of creating an environmentally adverse incentive through implementation of the statutory ban on use of class II substances in certain products on January 1, 1994, while permitting the use of the more harmful class I substances in the same products. Thus, the statutory prohibition in section 610(d) provided direction in choosing products on which to focus under section 610(b). Therefore, EPA considered those products for which the use of HCFCs would be eliminated in determining which products to identify as nonessential under the class I ban.

Products Subject To The Class I Ban

In § 82.66 of the final regulations implementing the class I ban, EPA banned the following products which release a class I substance that are identified as being nonessential:

- Any plastic party streamer or noise horn which is propelled by a chlorofluorocarbon, including but not limited to—
  - —String confetti;
  - —Marine safety horns;
  - —Sporting event horns;
  - —Personal safety horns;
  - —Wall-mounted alarms used in factories or other work areas; and
  - —Intruder alarms used in homes or cars.

EPA also restricted the sale of any cleaning fluid for electronic and photographic equipment which contains a chlorofluorocarbon, except for those sold or distributed to a commercial purchaser.

These products were specifically identified as nonessential in section 610(b) of the Act putting manufacturers on notice of the upcoming ban. Therefore, the effective date for the implementation of the ban on the sale and distribution of the products listed above was February 16, 1993, thirty days after publication of the final class I ban.

In addition to these products, the final rule identifies and bans the following nonessential products based on EPA's review of various criteria specified in the Act:

- Any plastic flexible or packaging foam product which is manufactured with or contains a chlorofluorocarbon (except flexible or packaging foam used in coaxial cable,) including but not limited to:
  - —Open cell polyurethane flexible slabstock foam;
  - —Open cell polyurethane flexible molded foam;
  - —Open cell rigid polyurethane poured foam;
  - —Closed cell extruded polystyrene sheet foam;
  - —Closed cell polyethylene foam; and
  - —Closed cell polypropylene foam.
- Any aerosol product or other pressurized dispenser, which contains a chlorofluorocarbon, including but not limited to, household, industrial, automotive and pesticide uses, except—
  - —Medical devices listed in 21 CFR 2.125(e);
  - —Lubricants for pharmaceutical and tablet manufacture;
  - —Gauze bandage adhesives and adhesive removers;
  - —Topical anesthetic and vapocoolant products;
  - —Lubricants, coatings or cleaning fluids for electrical or electronic equipment, which contain CFC–11, CFC–12, or CFC–113 for solvent purposes, but which contain no other CFCs;
  - —Lubricants, coatings or cleaning fluids used for aircraft maintenance, which contain CFC–11 or CFC–113, but which contain no other CFCs;
  - —Mold release agents used in the production of plastic and elastomeric materials, which contain CFC–11 or CFC–113, but which contain no other CFCs;
  - —Spinnerette lubricant/cleaning sprays used in the production of synthetic fibers, which contain CFC–114, but which contain no other CFCs;
  - —Containers of CFCs used as halogen ion sources in plasma etching;
  - —Document preservation sprays which contain CFC–113, but which contain no other CFCs; and
  - —Red pepper bear repellent sprays which contain CFC–113, but which contain no other CFCs.

While EPA based its determination of nonessential products in addition to those specified in the statute on a consideration of section 610 in its entirety, EPA understands that many producers, distributors, and retailers may not have been able to foresee that their products would be considered under the class I ban until the publication of the NPRM on January 16, 1992. Therefore, the effective date for banning these products did not coincide with the effective date for banning products specifically referred to in section 610(b). These additional products can no longer be sold or distributed or offered for sale or distribution in interstate commerce after January 17, 1994, one year from the publication of the final rule.

II. Today's Revisions to the Class I Nonessential Products Ban

The class I ban provided one year for manufacturers, distributors and retailers to eliminate inventories of nonessential products not specifically listed in the statute. EPA generally believes that sufficient time was provided under that rulemaking for manufacturers to alter production and for retailers to liquidate any remaining stocks of prohibited products. The Agency believes that the effect of the rulemaking was quite clear after the publication of the NPRM on January 16, 1992. The NPRM provided notice to the producers, distributors, and retailers of aerosol and foam products that such products would be covered by the class I ban. In general, EPA believes that this period of time constitutes adequate notice for affected businesses. However, the Agency has been contacted by manufacturers and suppliers concerned with the treatment of existing inventories of replacement parts with long shelf lives made for specific makes or models of products. These are primarily cases where the environmental damage resulting from use of a class I substance in a product occurred during production of the products and the products were produced prior to the publication of the proposal for the class I ban.

Prior to the publication of the NPRM on January 16, 1992, manufacturers may not have known that future regulations would affect their existing inventories. Furthermore, in cases where the products were produced prior to the signing of the Clean Air Act Amendments in November of 1990, manufacturers may not have been able to predict what if any regulations affecting their inventories were imminent. However, in most cases, EPA believes that adequate time was provided in the class I ban rulemaking to allow for the elimination of most existing inventories prior to the established effective dates. The manufacturers of plastic party streamers and noise horns were on notice of the upcoming ban since the Clean Air Act Amendments were signed. The manufacturers of aerosol and foam products were on notice since the publication of the NPRM on January 16, 1992. However, EPA recently has learned of a few specific cases, where, because of very long shelf lives, no set length of time would be practical for the depletion of the existing inventories. EPA has reviewed numerous inquires about existing inventories. In the situation of certain replacement parts, as described below, EPA believes that authority to provide relief does exist and that the relief is appropriate.

There are particular types of replacement parts that were manufactured and are currently stored solely for use in specific product models. Inventories often remain in existence for more than ten years. Manufacturers that produced replacement parts designed solely for a specific product model often manufactured the part at the same time the original product was manufactured, and had the replacement parts placed into inventory at that time, for use in the future. This situation generally occurs where product models change rapidly or drastically and it would not be practical to produce replacement parts at a later date.

For example, the American Automobile Manufacturers Association and the Association of International Automobile Manufacturers estimate that automobile manufacturers have well over one million separate part numbers and a significantly larger number of replacement parts in inventory. Often replacement parts are only fully compatible with one model. Many of the replacement parts used in automobiles have long shelf lives and are retained in inventory for many years. Routinely, during production of a vehicle, the manufacturer will order a "lifetime buy" of particular parts needed to service the vehicle line during the expected life of the model. For example, an automobile manufacturer may have authorized the production of surplus car seats during the production of a particular car model to allow for a lifetime supply of seats designed for that specific car model. The manufacturer created a lifetime supply of these seats to be used to replace seats damaged after the car had been purchased by the ultimate consumer.

Since those parts were produced to meet the specifications of a particular model, it may not be possible to manufacture new substitute parts at this time. The suppliers of the equipment needed to produce the part may no longer exist. If the equipment does still exist, it may have been greatly reconfigured. Even in cases where the supplier still exists and has the properly configured equipment to produce a new replacement part without CFCs, the cost of redesigning and producing the new replacement part to replace those in existing inventories may be prohibitively expensive. Therefore, the class I ban may have the unintended effect of causing specific products to be scrapped before the end of their useful lifetime due to the unavailability of replacements. This situation may be

especially pronounced with replacement parts for automobiles and other durable goods that by their very nature have long product lifetimes.

In some cases, particularly for replacement parts that were originally placed in inventory prior to the signing of the Clean Air Act Amendments, the manufacturers may not have initially determined whether each replacement part was manufactured with, or contains, CFCs. In addition, the manufacturer may not have initially determined if each replacement part was stored in packaging material that was manufactured with, or contains, CFCs.

EPA believes that there are a limited number of replacement parts placed in inventories prior to April 16, 1992 that are still in use today that fit this description. Furthermore, the types of parts and packaging material described above tend to be made with open cell foam products. In these cases, the environmental damage resulting from use of class I substances in such products would have occurred during the original production of the foam. Therefore, there would be no additional environmental benefit associated with the disuse of the replacement parts already in inventory.

Administrative creation of exemptions from statutory requirements are authorized in only limited circumstances, as outlined in *Alabama Power Co., et al.* v. *Costle, et al.*, 636 F. 2d 323 (D.C. Cir 1979). Agencies can create such exemptions only where necessary, based on administrative feasibility or the de minimis nature of the exemption. Through this rule, EPA is granting limited exemptions from the class I ban based on the de minimis nature of emissions resulting from use of replacement products produced and already placed in initial inventory prior to April 16, 1992, the date 90 days after publication of the NPRM for the original class I ban. The exemption EPA is authorizing is limited to existing inventories where the original product and the replacement parts are no longer manufactured today, the replacement parts were expressly manufactured for that specific product make or model, and is based on the de minimis rationale.

EPA believes that the vast majority of replacement parts with long shelf lives that will be exempted by this action are parts that either contain an open cell foam component or are stored in open cell foam packaging material. As to this majority of affected products, the environmental damage associated with the class I substance in the product has already occurred at the time of manufacture. While there may also be a few closed cell products that meet the narrow definition of exempt products under this rule, emissions to the environment from use of these products, once manufactured, will be little or no different from the releases of class I substances from these products if removed from commerce and subsequently disposed of. Thus, where such replacement parts already exist, subjecting products to the ban will have a de minimis environmental impact. Due to these circumstances, EPA believes it is appropriate to allow such products to be used for their intended purpose prior to disposal.

EPA wishes to clarify that this exemption does not apply to all product components. Specifically, this exemption would not apply to those products that are fully compatible with a full range of products. For example, a reusable pressurized dispenser may be designed to be removed from one container and affixed to another container. In addition, in the aftermarket for automotive parts, there are parts designed to be compatible with a full range of motor vehicles. These products would not be consistent with the intended meaning of the exemption for replacement parts outlined above.

This final action allows for continued sale of any replacement part meeting the criteria of this narrow exemption to be sold and distributed or offered for sale or distribution in interstate commerce after January 17, 1994. "Placed into initial inventory" within the meaning of this exemption means that the product has completed all manufacturing processes, is in all aspects ready for sale, and has been placed into the manufacturer's inventory.

April 16, 1992, the date prior to which products must have been placed into initial inventory to qualify for the exemption, represents ninety days after the class I NPRM was published in the **Federal Register**, allowing time for manufacturers to revise manufacturing processes to exclude class I substances. EPA believes that the publication of the January 16, 1992 NPRM provided sufficient notice of the Agency's intentions with respect to class I substances that manufacturers should have moved swiftly to alter their manufacturing processes. Therefore, any replacement parts that release class I substances into the environment during manufacture, use, storage, or disposal which are placed into initial inventory after April 16, 1992 are subject to the class I ban and cannot be sold or distributed, or offered for sale or distribution in interstate commerce after January 17, 1994.

To continue selling affected products after January 17, 1994, the manufacturer or distributor must be able to show that the product was manufactured and placed into initial inventory by April 16, 1992. Routine business records, such as shipping forms, lot numbers, manufacturer date stamps or codes, invoices, or the like, may be used to identify the date the product was placed into initial inventory. EPA believes these types of records are normally kept by manufacturers and distributors of products affected by today's action and that this final rule will not require the preparation of any additional records.

III. Effective Dates

This direct-final rulemaking will be effective February 28, 1994 unless EPA receives notice indicating that any person wishes to submit adverse comment. Should EPA receive such notice, EPA will withdraw this final action and propose such action with a request for public comment.

IV. Summary of Supporting Analysis

A. Executive Order 12866

Under Executive Order 12866 (58 FR 51735, October 4, 1993), the Agency must determine whether this regulatory action is "significant" and therefore subject to OMB review and the requirements of the Executive Order. The Order defines "significant" regulatory action as one that is likely to lead to a rule that may:

(1) Have an annual effect on the economy of $100 million or more, or adversely and materially affect a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

It has been determined by OMB and EPA that this rule is not a "significant regulatory action" under the terms of Executive Order 12866 and is therefore not subject to OMB review under the Executive Order.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act, 5 U.S.C. 601–602, requires that Federal agencies examine the impacts of their regulations on small entities. Under 5 U.S.C. 604(a), whenever an agency is required to publish a general notice of proposed rulemaking, it must prepare and make available for public comment an initial regulatory flexibility analysis (RFA). Such an analysis is not required if the head of an agency certifies that a rule will not have a significant economic impact on a substantial number of small entities, pursuant to 5 U.S.C. 605(b).

EPA believes that any impact that this amendment will have on the regulated community will serve only to provide relief from otherwise applicable regulations, and will therefore limit the negative economic impact associated with the regulations previously promulgated under section 610. An examination of the impacts on small entities was discussed in the final class I ban (58 FR 4797). That final rule assessed the impact the ban may have on small entities and provided examples of such impacts. In general, such impacts were found to be minimal. I certify that this amendment to the class I ban will not have any additional negative economic impacts on any small entities.

C. Paperwork Reduction Act

Any information collection requirements in a rule must be submitted for approval to the Office of Management and Budget (OMB) under the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* Because no informational collection requirements were implemented in the final class I regulations and none are being required by this amendment, EPA has determined that the Paperwork Reduction Act does not apply to this rulemaking and no Information Collection Request document has been prepared.

V. Judicial Review

Under section 307(b)(1) of the Act, EPA finds that these regulations are of national applicability. Accordingly, judicial review of this action is available only by the filing of a petition for review in the United States Court of Appeals for the District of Columbia Circuit within sixty days of publication of this action in the **Federal Register**. Under section 307(b)(2), the requirements of this rule may not be challenged later in judicial proceedings bought to enforce those requirements.

Title 40, Code of Federal Regulations, part 82, is amended as follows:

PART 82—PROTECTION OF STRATOSPHERIC OZONE

1. The authority citation for part 82 continues to read as follows:

Authority: 42 U.S.C. 7414, 7601, 7671–7671q.

2. Subpart C is revised to read as follows:

Subpart C—Ban on Nonessential Products Containing Class I Substances and Ban on Nonessential Products Containing or Manufactured with Class II Substances

Sec.

82.60 Purpose.
82.62 Definitions.
82.64 Prohibitions.
82.65 Temporary exemptions.
82.66 Nonessential Class I products and exceptions.
82.68 Verification and public notice requirements.
82.70 Nonessential Class II products and exceptions.

Subpart C—Ban on Nonessential Products Containing Class I Substances and Ban on Nonessential Products Containing or Manufactured with Class II Substances

§ 82.60 Purpose.

The purpose of this subpart is to implement the requirements of sections 608 and 610 of the Clean Air Act as amended in 1990 on emission reductions and nonessential products.

§ 82.62 Definitions.

For purposes of this subpart:

(a) *Chlorofluorocarbon* means any substance listed as Class I group I or Class I group III in 40 CFR part 82, appendix A to subpart A.

(b) *Commercial*, when used to describe the purchaser of a product, means a person that uses the product in the purchaser's business or sells it to another person and has one of the following identification numbers:

(1) A federal employer identification number;

(2) A state sales tax exemption number;

(3) A local business license number; or

(4) A government contract number.

(c) *Consumer*, when used to describe a person taking action with regard to a product, means the ultimate purchaser, recipient or user of a product.

(d) *Distributor*, when used to describe a person taking action with regard to a product means:

(1) The seller of a product to a consumer or another distributor; or

(2) A person who sells or distributes that product in interstate commerce for export from the United States.

(e) *Product* means an item or category of items manufactured from raw or recycled materials which is used to perform a function or task.

(f) *Release* means to emit into the environment during the manufacture, use, storage or disposal of a product.

(g) *Class II Substance* means any substance designated as class II in 40 CFR part 82, appendix B to subpart A.

(h) *Foam Insulation Product*, when used to describe a product containing or consisting of plastic foam, means a product containing or consisting of the following types of foam:

(1) Closed cell rigid polyurethane foam;

(2) Closed cell rigid polystyrene boardstock foam;

(3) Closed cell rigid phenolic foam; and

(4) Closed cell rigid polyethylene foam when such foam is suitable in shape, thickness and design to be used as a product that provides thermal insulation around pipes used in heating, plumbing, refrigeration, or industrial process systems.

(i) *Hydrochlorofluorocarbon* means any substance listed as class II in 40 CFR part 82, appendix B to subpart A.

(j) *Owner of a boat or marine vessel* means any person who possesses a title, registration or other documentation that indicates that the person presenting this documentation is in possession of a marine vessel as defined in 33 CFR part 177.

(k) *Owner of a noncommercial aircraft* means any person who possesses a title, registration or other documentation that indicates that the person presenting this documentation is in possession of a noncommercial aircraft.

§ 82.64 Prohibitions.

(a) Effective February 16, 1993, no person may sell or distribute, or offer to sell or distribute, in interstate commerce any of the products identified as being nonessential in § 82.66(a).

(b) Effective February 16, 1993, no person may sell or distribute, or offer to sell or distribute, in interstate commerce any of the products specified in § 82.66(b) to a person who does not provide proof of being a commercial purchaser, as defined under § 82.62.

(c) Effective January 17, 1994, no person may sell or distribute, or offer to sell or distribute, in interstate commerce any of the products identified as being nonessential in § 82.66(c) or § 82.66(d) except as permitted under § 82.65(g).

(d) Except as permitted under § 82.65, effective January 1, 1994, no person may sell or distribute, or offer for sale or distribution, in interstate commerce any product identified as being nonessential in § 82.70(a) or § 82.70(c).

(e) Except as permitted under § 82.65, effective January 1, 1994, no person may sell or distribute, or offer to sell or distribute, in interstate commerce any of the products specified in § 82.70(b) to a person who does not provide proof of being a commercial purchaser, as defined under § 82.62.

(f) Except as permitted under § 82.65(d), effective January 1, 1996, no person may sell or distribute, or offer for sale or distribution, in interstate commerce any product identified as being nonessential in § 82.70(c)(ii).

(g) It is a violation of this subpart to sell or distribute, or offer for sale or distribution, products effected by the provisions of § 82.68 if the seller knew or should have known that the purchaser was purchasing the product for a prohibited application.

§ 82.65 Temporary exemptions.

(a) Any person may sell or distribute, or offer to sell or distribute, in interstate commerce, at any time, any products specified as nonessential in § 82.70 which are manufactured and placed into initial inventory by December 31, 1993.

(b) Any person may sell or distribute, or offer to sell or distribute, in interstate commerce, at any time, any products specified as nonessential in § 82.70 which are manufactured and placed into initial inventory within the date 90 days after the effective date of any federal approvals required for product reformulation, where application for the required approval was timely and properly submitted to the approving federal agency prior to January 1, 1994.

(c)(1) Any person may sell or distribute or offer to sell or distribute, in interstate commerce, at any time, any products specified as nonessential in § 82.70 which are manufactured and placed into initial inventory within 45 days after the receipt of denial by any federal agency of an application for reformulation where initial application for the required approval was timely and properly submitted to the approving federal agency prior to January 1, 1994.

(2) If, within 45 days of receipt of a denial of an application for reformulation, a person submits a new viable application for federal approval of a reformulation, that person may continue to sell and distribute, or offer to sell and distribute until 45 days of denial of that application.

(d) Any person may sell or distribute, or offer to sell or distribute, in interstate commerce, at any time, any integral skin foam utilized to provide for motor vehicle safety in accordance with Federal Motor Vehicle Safety Standards, which are manufactured and placed into initial inventory prior to January 1, 1996.

(e) Any person selling or distributing, or offering to sell or distribute, any product specified in this section after January 1, 1994, or January 1, 1996 for paragraph (d) of this section, or after January 17, 1994 for any product specified in paragraph (g) of this section, must retain proof that such product was manufactured and placed into initial inventory before the relevant date specified in this section. Such proof may take the form of shipping forms, lot numbers, manufacturer date stamps, invoices or equivalent business records.

(f) Any person may sell or distribute, or offer to sell or distribute, in interstate commerce, any aircraft pesticide containing class I until an alternative aircraft pesticide containing class II is available in interstate commerce.

(g) Any person may sell or distribute, or offer to sell or distribute, in interstate commerce, at any time, any replacement part that was manufactured with, or contains a class I substance or was packaged in material that was manufactured with or contains a class I substance only if:

(1) The replacement part was manufactured for use in a single model of a product; and

(2) The replacement part and product model are no longer manufactured; and

(3) The replacement part was placed into initial inventory prior to April 16, 1992.

§ 82.66 Nonessential Class I products and exceptions.

The following products which release a Class I substance (as defined in 40 CFR part 82, appendix A to subpart A) are identified as being nonessential, and subject to the prohibitions specified under § 82.64—

(a) Any plastic party streamer or noise horn which is propelled by a chlorofluorocarbon, including but not limited to—

(1) String confetti;

(2) Marine safety horns;

(3) Sporting event horns;

(4) Personal safety horns;

(5) Wall-mounted alarms used in factories or other work areas; and

(6) Intruder alarms used in homes or cars.

(b) Any cleaning fluid for electronic and photographic equipment which contains a chlorofluorocarbon:

(1) Including but not limited to liquid packaging, solvent wipes, solvent sprays, and gas sprays; and

(2) Except for those sold or distributed to a commercial purchaser.

(c) Any plastic flexible or packaging foam product which is manufactured with or contains a chlorofluorocarbon;

(1) Including but not limited to:

(i) Open cell polyurethane flexible slabstock foam;

(ii) Open cell polyurethane flexible molded foam;

(iii) Open cell rigid polyurethane poured foam;

(iv) Closed cell extruded polystyrene sheet foam;

(v) Closed cell polyethylene foam; and

(vi) Closed cell polypropylene foam.

(2) Except—flexible or packaging foam used in coaxial cable.

(d) Any aerosol product or other pressurized dispenser, other than those banned in § 82.64(a) or § 82.64(b), which contains a chlorofluorocarbon,

(1) Including but not limited to household, industrial, automotive and pesticide uses,

(2) Except—

(i) Medical devices listed in 21 CFR 2.125(e);

(ii) Lubricants for pharmaceutical and tablet manufacture;

(iii) Gauze bandage adhesives and adhesive removers;

(iv) Topical anesthetic and vapocoolant products;

(v) Lubricants, coatings or cleaning fluids for electrical or electronic equipment, which contain CFC–11, CFC–12, or CFC–113 for solvent purposes, but which contain no other CFCs;

(vi) Lubricants, coatings or cleaning fluids used for aircraft maintenance, which contain CFC–11 or CFC–113 as a solvent, but which contain no other CFCs;

(vii) Mold release agents used in the production of plastic and elastomeric materials, which contain CFC–11 or CFC–113 as a solvent, but which contain no other CFCs, and/or mold release agents that contain CFC–12 as a propellant, but which contain no other CFCs;

(viii) Spinnerette lubricant/cleaning sprays used in the production of synthetic fibers, which contain CFC–114 as a solvent, but which contain no other CFCs, and/or spinnerette lubricant/cleaning sprays which contain CFC–12 as a propellant, but which contain no other CFCs;

(ix) Containers of CFCs used as halogen ion sources in plasma etching;

(x) Document preservation sprays which contain CFC–113 as a solvent, but which contain no other CFCs, and/or document preservation sprays which contain CFC–12 as a propellant, but which contain no other CFCs, and which are used solely on thick books, books with coated or dense paper and tightly bound documents; and

(xi) Red pepper bear repellent sprays which contain CFC–113 as a solvent, but which contain no other CFCs.

§ 82.68 Verification and public notice requirements.

(a) Effective February 16, 1993, any person who sells or distributes any cleaning fluid for electronic and photographic equipment which contains a chlorofluorocarbon must verify that the purchaser is a commercial entity as defined in § 82.62. In order to verify that the purchaser is a commercial entity, the person who sells or distributes this product must request documentation that proves the purchaser's commercial status by containing one or more of the commercial identification numbers specified in § 82.62(b). The seller or distributor must have a reasonable basis for believing that the information presented by the purchaser is accurate.

(b) Effective February 16, 1993, any person who sells or distributes any cleaning fluid for electronic and photographic equipment which contains a chlorofluorocarbon must prominently display a sign where sales of such product occur which states: "It is a violation of federal law to sell, distribute, or offer to sell or distribute, any chlorofluorocarbon-containing cleaning fluid for electronic and photographic equipment to anyone who is not a commercial user of this product. The penalty for violating this prohibition can be up to $25,000 per sale. Individuals purchasing such products must present proof of their commercial status in accordance with § 82.68(a)."

(c) Effective January 1, 1994, any person who sells or distributes any aerosol or pressurized dispenser of cleaning fluid for electronic and photographic equipment which contains a class II substance must verify that the purchaser is a commercial entity as defined in § 82.62(b). In order to verify that the purchaser is a commercial entity, the person who sells or distributes this product must request documentation that proves the purchaser's commercial status by containing one or more of the commercial identification numbers specified in § 82.62(b).

(d) Effective January 1, 1994, any person who sells or distributes any aerosol or other pressurized dispenser of cleaning fluid for electronic and photographic equipment which contains a class II substance must prominently display a sign where sales of such product occur which states: "It is a violation of federal law to sell, distribute, or offer to sell or distribute, any aerosol hydrochlorofluorocarbon-containing cleaning fluid for electronic and photographic equipment to anyone who is not a commercial user of this product. The penalty for violating this prohibition can be up to $25,000 per unit sold. Individuals purchasing such products must present proof of their commercial status in accordance with § 82.68(c)."

(e) Effective January 1, 1994, in order to satisfy the requirements under § 82.68 (b) and (d), any person who sells or distributes cleaning fluids for electronic and photographic equipment which contain a class I substance and those aerosol or pressurized dispensers of cleaning fluids which contain a class II substance, may prominently display one sign where sales of such products occur which states: "It is a violation of federal law to sell, distribute, or offer to sell or distribute, any chlorofluorocarbon-containing cleaning fluid for electronic and photographic equipment or aerosol hydrochlorofluorocarbon-containing cleaning fluid for electronic and photographic equipment to anyone who is not a commercial user of this product. The penalty for violating this prohibition can be up to $25,000 per unit sold. Individuals purchasing such products must present proof of their commercial status in accordance with 40 CFR 82.68(a) or 82.68(c)."

(f) Effective January 1, 1994, any person who sells or distributes any portable fire extinguisher containing a class II substance must prominently display a sign where sales of such products occur; or in cases where the purchaser does not physically come in contact with the point of sale, written notification must be given. This notification must state: "It is a violation of federal law to sell portable fire extinguishers containing hydrochlorofluorocarbons to anyone, *except* for use in applications where necessary to extinguish fire efficiently without irreparably damaging the equipment or area being protected or where the use of other alternatives can cause a hazard to persons in the area. The penalty for violating this prohibition can be up to $25,000 per unit sold. Individuals purchasing such products must present proof of their commercial status in accordance with 40 CFR 82.68(a), or of ownership of a marine vessel or boat in accordance with 40 CFR 82.62(j), or of ownership of a noncommercial aircraft in accordance with 40 CFR 82.62(k)." Written

notification may be placed on sales brochures, order forms, invoices and the like.

(g) Effective January 1, 1994, any person who sells or distributes any portable fire extinguisher which contains a class II substance must verify that the purchaser is a commercial entity as defined in § 82.62(b) or is the owner of a marine vessel or boat in accordance with § 82.62(j) or the owner of a noncommercial aircraft in accordance with § 82.62(k). In order to verify that the purchaser is a commercial entity, the person who sells or distributes this product must be presented with documentation that proves the purchaser's commercial status by containing one or more of the commercial identification numbers specified in § 82.62(b). In order to verify that the purchaser is the owner of a marine vessel or boat, the person who sells or distributes this product must be presented with documentation specified in § 82.62(j) that proves the purchaser's status as the owner of a marine vessel or boat. In order to verify that the purchaser is in ownership of a noncommercial aircraft, the person who sells or distributes this product must be presented with documentation specified in § 82.62(k) that proves the purchaser's status as the owner of a noncommercial aircraft by containing one or more of the identification information specified in § 82.62(k). The seller or distributor must have a reasonable basis for believing that the information presented by the purchaser is accurate.

(h) Effective January 1, 1994, any person who sells or distributes any mold release agents containing a class II substance as a propellant must provide written notification to the purchaser prior to the sale that "It is a violation of federal law to sell mold release agents containing hydrochlorofluorocarbons as propellants to anyone, except for use in applications where no other alternative except a class I substance is available. The penalty for violating this prohibition can be up to $25,000 per unit sold." Written notification may be placed on sales brochures, order forms, invoices and the like.

(i) Effective January 1, 1994, any person who sells or distributes any wasp and hornet spray containing a class II substance must provide written notification to the purchaser prior to the sale that "it is a violation of federal law to sell or distribute wasp and hornet sprays containing hydrochlorofluorocarbons as solvents to anyone, except for use near high-tension power lines where no other alternative except a class I substance is available. The penalty for violating this prohibition can be up to $25,000 per unit sold." Written notification may be placed on sales brochures, order forms, invoices and the like.

§ 82.70 Nonessential Class II products and exceptions.

The following products which release a class II substance (as designated as class II in 40 CFR part 82, appendix B to subpart A) are identified as being nonessential and the sale or distribution of such products is prohibited under § 82.64(d), (e), or (f)—

(a) Any aerosol product or other pressurized dispenser which contains a class II substance:

(1) Including but not limited to household, industrial, automotive and pesticide uses;

(2) Except—

(i) Medical devices listed in 21 CFR 2.125(e);

(ii) Lubricants, coatings or cleaning fluids for electrical or electronic equipment, which contain class II substances for solvent purposes, but which contain no other class II substances;

(iii) Lubricants, coatings or cleaning fluids used for aircraft maintenance, which contain class II substances for solvent purposes but which contain no other class II substances;

(iv) Mold release agents used in the production of plastic and elastomeric materials, which contain class II substances for solvent purposes but which contain no other class II substances, and/or mold release agents that contain HCFC–22 as a propellant where evidence of good faith efforts to secure alternatives indicates that, other than a class I substance, there are no suitable alternatives;

(v) Spinnerette lubricants/cleaning sprays used in the production of synthetic fibers, which contain class II substances for solvent purposes and/or contain class II substances for propellant purposes;

(vi) Document preservation sprays which contain HCFC–141b as a solvent, but which contain no other class II substance; and/or which contain HCFC–22 as a propellant, but which contain no other class II substance and which are used solely on thick books, books with coated, dense or paper and tightly bound documents;

(vii) Portable fire extinguishing equipment sold to commercial users, owners of marine vessels or boats, and owners of noncommercial aircraft that contains a class II substance as a fire extinguishant where evidence of good faith efforts to secure alternatives indicate that, other than a class I substance, there are no suitable alternatives; and

(viii) Wasp and hornet sprays for use near high-tension power lines that contain a class II substance for solvent purposes only, but which contain no other class II substances.

(b) Any aerosol or pressurized dispenser cleaning fluid for electronic and photographic equipment which contains a class II substance, except for those sold or distributed to a commercial purchaser.

(c) Any plastic foam product which contains, or is manufactured with, a class II substance,

(1) Including but not limited to household, industrial, automotive and pesticide uses,

(2) Except—

(i) Any foam insulation product, as defined in § 82.62(h); and

(ii) Integral skin foam utilized to provide for motor vehicle safety in accordance with Federal Motor Vehicle Safety Standards until January 1, 1996, after which date such products are identified as nonessential and may only be sold or distributed or offered for sale or distribution in interstate commerce in accordance with § 82.65(d).

Title 3—

The President

Executive Order 12889 of December 27, 1993

Implementation of the North American Free Trade Agreement

By the authority vested in me as President by the Constitution and the laws of the United States of America, including the North American Free Trade Agreement Implementation Act (Public Law 103–182, 107 Stat. 2057) (the NAFTA Implementation Act) and section 302 of title 3, United States Code, and in order to implement the North American Free Trade Agreement (NAFTA), it is hereby ordered:

Section 1. *Establishment of United States Section of the NAFTA Secretariat.* Pursuant to section 105(a) of the NAFTA Implementation Act, a United States section of the NAFTA Secretariat shall be established within the Department of Commerce and shall carry out the functions set out in that section.

Sec. 2. *Acceptance by the President of Panel and Committee Decisions.* Pursuant to subparagraph 516A(g)(7)(B) of the Tariff Act of 1930, as amended, 19 U.S.C. 1516a(g)(7)(B), in the event that the provisions of that subparagraph take effect, I accept, as a whole, all decisions of binational panels and extraordinary challenge committees.

Sec. 3. *Implementation of Safeguard Provisions for Textile and Apparel Goods.* Pursuant to section 201 of the NAFTA Implementation Act, the Committee for the Implementation of Textile Agreements (the Committee) shall take such action as necessary to implement the bilateral safeguard provisions (tariff actions) set out in section 4 of Annex 300–B of the NAFTA. The United States Customs Service shall take such actions to carry out those safeguard provisions as directed by the Secretary of the Treasury, upon the advice and recommendation of the Chairman of the Committee.

Sec. 4. *Publication of Proposed Rules regarding Technical Regulations and Sanitary and Phytosanitary Measures.* (a) In accordance with Articles 718 and 909 of the NAFTA, each agency subject to the provisions of the Administrative Procedure Act, as amended (5 U.S.C. 551 *et seq.*), shall, in applying section 553 of title 5, United States Code, with respect to any proposed Federal technical regulation or any Federal sanitary or phytosanitary measure of general application, other than a regulation issued pursuant to section 104(a) of the NAFTA Implementation Act, publish or serve notice of such regulation or measure not less than 75 days before the comment due date, except:

(1) in the case of a technical regulation relating to perishable goods, in which case the agency shall, to the greatest extent practicable, publish or serve notice at least 30 days prior to adoption of such regulation;
(2) in the case of a technical regulation, where the United States considers it necessary to address an urgent problem relating to safety or to protection of human, animal or plant life or health, the environment or consumers; or
(3) in the case of a sanitary or phytosanitary measure, where the United States considers it necessary to address an urgent problem relating to sanitary or phytosanitary protection.

(b) For purposes of this section, the term "sanitary or phytosanitary measure" shall be defined in accordance with section 463 of the Trade Agreements

Act of 1979, and "technical regulation" shall be defined in accordance with section 473 of the Trade Agreements Act of 1979.

(c) This section supersedes section 1 of Executive Order No. 12662 of December 31, 1988.

Sec. 5. *Government Procurement Procedures.* (a) Waiver.

(1) With respect to eligible products (as defined in section 381(c) of the NAFTA Implementation Act) of Canada and Mexico, and suppliers of such products, the application of any law, regulation, procedure, or practice regarding Federal Government procurement that would, if applied to such products or suppliers, result in treatment less favorable than the most favorable treatment accorded:

(A) to United States products and services and suppliers of such products and services; or
(B) to eligible products of either Mexico or Canada, shall be waived.

(2) This waiver shall be applied by all executive agencies listed in Annexes 1 and 2 of this Executive order in consultation with, and when deemed necessary at the direction of, the United States Trade Representative (Trade Representative).

(b) The Secretary of Defense, or his designee, in consultation with the Trade Representative, shall be responsible for determinations under Article 1018(1), pursuant to Annex 1001.1b-1(A)(4), of the NAFTA. The Secretary of Defense, or his designee, and the Trade Representative shall establish procedures for this purpose.

(c) The executive agencies listed in Annex 2 are directed to procure eligible products in compliance with the procedural provisions of Chapter 10 of the NAFTA.

(d) The Trade Representative shall be responsible for calculating and adjusting the threshold as required by Article 1001(1)(c) of the NAFTA.

(e) This order shall apply only to solicitations issued on or after the date of entry into force of the NAFTA for the United States.

(f) Although regulatory implementation of this order must await revisions to the Federal Acquisitions Regulation (FAR), it is expected that agencies listed in Annexes 1 and 2 of this order will take all appropriate actions in the interim to implement those aspects of the order that are not dependent upon regulatory revision.

(g) Pursuant to section 25 of the Office of Federal Procurement Policy Act, as amended (41 U.S.C. 421(a)), the Federal Acquisition Regulatory Council shall ensure that the policies established herein are incorporated in the FAR within 30 days from the date this order is issued.

Sec. 6. *Government Use of Patented Technology.* (a) Each agency shall, within 30 days from the date this order is issued, modify or adopt procedures to ensure compliance with Article 1709(10) of the NAFTA regarding notice when patented technology is used by or for the Federal Government without a license from the owner, except that the requirement of Article 1709(10)(b) regarding reasonable efforts to obtain advance authorization from the patent owner:

(1) is hereby waived for an invention used or manufactured by or for the Federal Government, except that the patent owner must be notified whenever the agency or its contractor, without making a patent search, knows or has demonstrable reasonable grounds to know that an invention described in and covered by a valid United States patent is or will be used or manufactured without a license; and
(2) is waived whenever a national emergency or other circumstances of extreme urgency exists, except that the patent owner must be notified as soon as it is reasonably practicable to do so.

(b) Agencies shall treat the term "remuneration" as used in Articles 1709(10)(h) and (j) and 1715 of the NAFTA as equivalent to "reasonable and entire compensation" as used in section 1498 of title 28, United States Code.

(c) In addition to the general provisions of section 7 of this order regarding enforceable rights, nothing in this order is intended to suggest that the giving of notice to a patent owner under Article 1709(10) of the NAFTA constitutes an admission that the Federal Government has infringed a valid privately-owned patent.

Sec. 7. *Judicial Review.* This order does not create any right or benefit, substantive or procedural, enforceable at law by a party against the United States, its agencies, its officers, or any person.

Sec. 8. *Effective Date.* This order shall take effect upon the date of entry into force of the NAFTA for the United States.

LIST OF PUBLIC LAWS

Note: The list of Public Laws for the first session of the 103d Congress has been completed and will resume when bills are enacted into law during the second session of the 103d Congress, which convenes on January 25, 1994.

A cumulative list of Public Laws for the first session of the 103d Congress will be published in Part IV of the Federal Register on January 3, 1994.

Last List December 23, 1993

LSA—LIST OF CFR SECTIONS AFFECTED

The LSA (List of CFR Sections Affected) is a monthly publication designed to lead users of the Code of Federal Regulations (CFR) to amendatory actions published in the Federal Register (FR). It should be shelved with current CFR volumes. Entries are by CFR title, chapter, part, and section. Proposed rules are listed at the end of appropriate titles.

HOW TO USE THIS FINDING AID

The CFR is revised annually according to the following schedule:

Titles 1–16—as of Jan. 1
17–27—as of April 1
28–41—as of July 1
42–50—as of Oct. 1

To bring these regulations up to date, consult the most recent LSA for any changes, additions, or removals published after the revision date of the volume you are using. Then check the CUMULATIVE LIST OF PARTS AFFECTED appearing in the Reader Aids of the latest Federal Register for less detailed but timely changes published after the final date included in this publication.

Boldface page numbers under a particular title indicate that the page numbers span 2 years. **Boldface** is used to distinguish the previous year from the current year.

Cite a page reference from this publication using the volume number (i.e. 58 FR for 1993) and the page number. Example: 24727 cite as 57 FR 24727. For your convenience, the volume number has been included in the Table of Federal Register Issue Pages and Dates.

ISSUES TO BE SAVED

There is no single annual issue of the LSA. Four ANNUAL ISSUES must be saved; the DECEMBER issue is the ANNUAL for Titles 1–16; the MARCH issue is the ANNUAL for Titles 17–27; the JUNE issue is the ANNUAL for Titles 28–41; the SEPTEMBER issue is the ANNUAL for Titles 42–50. ANNUAL ISSUES to be saved are clearly designated on the cover.

PARALLEL TABLE OF AUTHORITIES AND RULES

Following Title 50 is an update to Table I—Parallel Table of Authorities and Rules found in the CFR Index and Finding Aids. This table contains authority citations added to or removed from Table I as a result of documents published in the Federal Register since January 1, 1993.

TABLE OF FEDERAL REGISTER ISSUE PAGES AND DATES

A table is included at the end of this publication which identifies the volume number, the inclusive page numbers, and the corresponding Federal Register issue dates for the period covered.

INDEXES

An INDEX to the daily Federal Register is published monthly and is cumulated for 12 months. A separate volume, the CFR Index and Finding Aids to the entire Code of Federal Regulations, is revised as of January 1 each year.

INQUIRIES AND SUGGESTIONS

Brian Swidal was Chief Editor of the LSA. The LSA was prepared under the direction of Richard L. Claypoole, assisted by Laurice Clark and Ken Payne. INQUIRIES, telephone 202–523–5227.

SUGGESTIONS concerning this and other publications of the Office are welcomed. Please send your suggestions to Martha L. Girard, Director, Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408.

CHECKLIST OF CFR VOLUMES FOR THIS MONTH—Continued

(Comprising a Complete CFR Set)

Title	Stock Number	Price	Revision Date
Individual copies		2.00	1992

[1]Because title 3 is an annual compilation, this volume and all previous volumes should be retained as a permanent reference source.

[2]The July 1, 1985 edition of 32 CFR parts 1—189 contains a note only for parts 1—39 inclusive. For the full text of the Defense Acquisition Regulations in parts 1—39, consult the three CFR volumes issued as of July 1, 1984, containing those parts.

[3]The July 1, 1985 edition of 41 CFR chapters 1—100 contains a note only for chapters 1 to 49 inclusive. For the full text of procurement regulations in chapters 1 to 49, consult the three CFR volumes issued as of July 1, 1984 containing those chapters.

[4]No amendments to this volume were promulgated during the period January 1, 1987 through December 31, 1992. The CFR volume issued as of January 1, 1987 should be retained.

[5]No amendments to this volume were promulgated during the period April 1, 1990 through March 30, 1993. The CFR volume issued as of April 1, 1990 should be retained.

[6]No amendments to this volume were promulgated during the period July 1, 1989 through June 30, 1992. The CFR volume issue as of July 1, 1989 should be retained.

Order from Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954. Charge orders (VISA, MasterCard, or GPO Deposit Account) may be telephoned to the GPO order desk at (202) 783-3238 from 8:00 a.m. to 4:00 p.m. eastern time, Monday-Friday (except holidays).

1421.20 (a) introductory text, (b) and (c)(1)(ii) revised; interim.....14503
(b) revised.....38665
1421.22 (d) added; interim.....14503
1421.25 (a)(1) introductory text and (ii)(A) revised; (d) removed; (e) and (f) redesignated as (d) and (e); interim.....14504
(d) redesignated as (f); (e) removed; new (d) and (e) added.....38665
1421.27 (a)(2)(ii) revised; (a)(2)(iii) added.....33886
1421.29 (b)(3) redesignated as (b)(4); new (b)(3), (h) and (i) added; (f) revised; interim.....14504
1421.203 Revised; interim.....14504, 45040
1421.210 (b)(5)(iv) revised; interim.....14504
1421.214 Revised; interim.....14505
1421.217 (c) revised.....38510
1421.740 Correctly designated.....28446
1427.3 Regulation at 57 FR 40594 confirmed.....15262
1427.4 Regulation at 57 FR 40595 confirmed.....15262
1427.5 Regulation at 57 FR 40595 confirmed.....15262
1427.6 Regulation at 57 FR 40595 confirmed.....15262
1427.7 Regulation at 57 FR 40595 confirmed.....15262
1427.8 (a)(2)(ii) revised; (a)(2)(iii) added.....12333
(a)(1)(ii) revised; (a)(1)(iii) added.....15756
1427.9 Regulation at 57 FR 40595 confirmed.....15262
1427.11 Regulation at 57 FR 40595 confirmed.....15262
1427.12 Regulation at 57 FR 40596 confirmed.....15262
1427.15 Regulation at 57 FR 40596 confirmed.....15262
1427.17 Regulation at 57 FR 40596 confirmed.....15262
1427.18 Regulation at 57 FR 40596 confirmed.....15262
1427.19 Regulation at 57 FR 40596 confirmed.....15262
1427.23 Regulation at 57 FR 40596 confirmed.....15262
1427.25 (f)(1) revised; interim.....41994
1427.107 (d)(3) revised; (e) and (f) redesignated as (f) and (g); new (e) added; interim.....42843
1427.109 (c)(3) and (e) revised; interim.....42843
1427.167 Regulation at 57 FR 40597 confirmed.....15262
1427.168 Regulation at 57 FR 40597 confirmed.....15262
1427.175 Regulation at 57 FR 40597 confirmed.....15262
1434.3 (a), (f) and (g) revised; interim.....14505
1434.4 (a), (b)(1) introductory text, (2) introductory text, (2)(i) and (f) revised; interim.....14505
1434.5 Removed; interim.....14505
1434.6 Heading and (a) revised; interim.....14505
1434.7 (b) and (c) revised; interim.....14505
1434.9 (a)(1) and (2)(i) revised; interim.....14506
1434.10 (a) and (e) revised; interim.....14506
1434.15 (c) revised; interim.....14506
1434.16 (a)(1) revised; interim.....14506
1434.19 Removed; interim.....14506
1434.22 (a), (b) introductory text, (e) and (f) revised; (g) removed; interim.....14506
1434.23 Revised; interim.....14507
1434.24 Heading, (a)(3), (d) and (e)(2) revised; interim.....14508
1434.25 (a)(2)(i) revised; (f) removed; (g) and (h) redesignated as (f) and (g); interim.....14508
1434.26 (b)(3) redesignated as (b)(4); new (b)(3) added; (e) removed; (f) redesignated as (e) and revised; interim.....14508
1434.27 (c) revised; interim.....14508
1434.32 (b) amended; interim.....14508
1435.500—1435.529 (Subpart) Added; interim.....36124
1435.530 Added; interim.....41995
1446.303 (g)(5) amended; interim.....41626
1464 Authority citation revised.....11962
1464.12 Redesignated as 1464.24; new 1464.12 added.....11962

TITLE 7 Chapter XIV—Con. Page

1464.13 Added....36863
1464.14 Added....36863
1464.15 Added....36863
1464.16 Added....36863
1464.17 Added....36863
1464.18 Added....36863
1464.19 Added....36859
1464.24 Redesignated from 1464.12....11962
1477 Authority citation revised....9108
1477.3 Amended....9108
1477.4 Revised....9109
1477.5 (a)(3) and (4)(ii) amended; (a)(5) added....9109
1477.7 (b) and (d) revised; (e) and (f) added....9109
1477.8 Revised....9109
1477.9 (a)(1) revised....9109
1477.10 (d)(2) and (e) revised....9110
1477.12 (c) revised....9110
1477.20 Redesignated as 1477.21; new 1477.20 added....19768
1477.21 Redesignated from 1.477.20....19768
1478 Authority citation revised....9110
1478.1 (a) revised....9110
1478.3 (b) amended....9110
1478.4 Revised....9111
1478.5 Revised....9111
1478.6 Revised....9111
1478.8 (d) and (e) revised....9111
1478.9 Revised....9112
1493 Authority citation revised....11789
1493.200—1493.340 (Subpart C) Added; interim....11789
1493.210 Corrected....13684
1493.220 Correctly designated....15901, 21218

Chapter XV—Foreign Agricultural Service, Department of Agriculture (Parts 1500—1599)

1540.40—1540.45 (Subpart C) Added; interim....16104

1941.30 Revised; interim....44747
Amended; interim....48286
1941.33 (a) amended; interim....48282
1941.1—1941.50 (Subpart A) Exhibit A amended; interim....44752, 44753
1941.51 Amended; interim....48282
1941.54 (b)(2) revised; (b)(3) amended; interim....48286
1941.84 (a) and (b) amended; (c) through (g) redesignated as (d) through (h); new (c) added; new (d) and (g) revised....26680
1941.88 (c) amended....26680
1941.92 Amended....26681
1942.1 (a) amended....226

TITLE 7 Chapter XVIII—Con. Page

1942.17 (q)(4)(i)(B)(*1*), (ii) introductory text and (B) heading and introductory text amended; (q)(4)(i)(A)(*2*)(*iii*) and (ii)(A) heading revised....30102
1942.101 Amended....226
1942.301 Amended....226
1942.351 (a) amended....226
1942.402 (a) amended....226
1942.451 Amended....227
1942.501 (a) amended....227
1943 Authority citation revised....48287
1943.1—1943.50 (Subpart A) Heading amended; interim....48282
1943.1 Amended....227
Amended; interim....48282
1943.4 Amended....26681
Amended; interim....48287
1943.14 Added; interim....48287
1943.16 (a)(4) added; interim....48288
1943.17 (a)(1) amended; interim....48282
(a)(4) and (5) added; interim....48288
1943.24 (d)(1) and (2) revised....26681
1943.25 (c)(1) introductory text revised....26681
(c)(2) amended; interim....44752
1943.28 (a) amended; interim....48288
1943.29 (d) amended; interim....44747
Heading, (b)(1) and (2) amended; interim....48282
(a) and (b) introductory text amended; interim....48288
1943.30 Revised; interim....44747
Amended; interim....48288
1943.32 (a) amended; interim....44752
1943.38 (g)(3)(ii) revised; (g)(3)(iii) amended; interim....48288
1943.51—1943.100 (Subpart B) Heading amended; interim....48282
1943.51 Amended....227
Amended; interim....48282
1943.54 Amended....15072, 26681
Amended; interim....48288
1943.57 Added....15072
1943.62 (a)(3) through (7) redesignated as (a)(4) through (8) and (b)(4) through (9) redesignated as (b)(5) through (10); (a)(1), new (a)(8), (b)(3) and new (b)(9) amended; new (a)(3), new (b)(4), (11) and (12) added; new (a)(7) and new (b)(8) revised....15072
1943.66 Revised....15073
1943.67 (a), (b) and (c) redesignated as (c), (d) and (e); new (e) amended; new (a) and new (b) added....15074
1943.68 (c) revised....15074
1943.73 (d), (f)(1) and (2) amended; (f)(2)(iii) and (4) removed....15074
1943.74 (d)(1) and (2) revised....26681
1943.75 (c)(1) introductory text revised....26681
(c)(2) amended; interim....44752
(c)(4)(iii) amended; interim....48289
1943.79 (c)(1) revised....15074
Heading, (a), (c) introductory text, (1) and (d) amended; interim....44748
(d) amended; interim....48289
1943.80 Revised; interim....44748, 48289
1943.82 (a) amended; interim....44748, 44752
1943.88 (g)(3)(ii) revised; (g)(3)(iii) amended; interim....48289
1944 Authority citation revised....227
1944.1 Amended....227
1944.3 (b)(9) and (14) revised....48301
1944.17 (a) introductory text revised....48301
1944.24 (c)(2) amended; interim....44752
1944.30 (a) amended; interim....44752
1944.37 (f) and (g) amended....227
1944.39 Revised....227
1944.151 Amended....227
1944.153 Amended....40951
1944.157 (a)(7)(iii) amended; interim....44753
1944.158 (n) added....38923
1944.164 (n) heading and (o) amended; (p) revised....38923
1944.169 (i) heading and (2) revised....40951
(a)(1)(i) amended; interim....44752
1944.170 Introductory text added....40951
1944.171 (d) table amended....38923
1944.176 (d)(3) removed; (d)(4), (5) and (6) redesignated as (d)(3), (4) and (5); (d)(2) revised....38923
1944.151—1944.200 (Subpart D) Exhibit B amended....40951
1944.201 Amended....227
1944.205 Amended...38924, 40951, 44263
1944.211 (a)(10)(ii) introductory text and (B) revised; (a)(11), (12) and (13) redesignated as (a)(12), (13) and (14); new (a)(11) added....38924
(a)(6)(iv) revised....40952
(a)(4) amended....44263
1944.212 Heading revised; (q) added....38924
1944.213 (b)(1) amended; (b)(3) and (4) redesignated as (b)(4) and (5); new (b)(3) added....38924
(c)(5) through (11) redesignated as (c)(6) through (12); (b) and new (c)(11) revised; new (c)(5) and (f) added....44263
1944.215 (b)(2), (c)(5)(ii), (h)(1) and (r)(3) amended; (d), (j), (n) introductory text and (r)(2) revised; (n)(3) added....38924
(b)(5), (6), (7) and (c)(5)(ii) amended....40953
(n) introductory text, (r)(2), (4) and (7) revised....44265
1944.222 (k) heading and (2) revised....40953
(a) and (h) amended....44265
1944.224 (a)(2)(i) amended....38925
(a) introductory text, (1), (2) introductory text, (i), (iii), (vi), (4), (5) introductory text, (iii), (iv), (7), (8), (b) introductory text, (1)(iv), (2), (7), (c)(2) and (5) amended....40953
1944.231 Revised....44265
1944.232 Revised....44272
1944.235 (a)(1) amended....38925
(h) heading, introductory text, (1), (2) and (3) amended....40954
(c)(1)(iv) amended....44272
1944.236 (b)(5) removed; (b)(6) redesignated as (b)(5) and revised; new (b)(6) and (7) added....38925
1944.237 (a) and (e) revised; (f) and (g) added....38925
(c)(1), (2) and (d)(2) revised....44273
1944.238 Amended....38925
1944.239 (c) introductory text revised; (d) added....40954
1944.201—1944.250 (Subpart E) Exhibit A-11 added....38925
Exhibits A, A-6 and E amended....40954
Exhibit A-10 revised....44273
1944.250 Amended....44273
1944.251—1944.300 (Subpart F) Technical correction....14509
1944.258 OMB number....14510
1944.266 OMB number....14510
1944.284 OMB number....14510
1944.286 OMB number....14510
1944.401 Amended....227
1944.451 Amended....228

102.27 Redesignated as 102.28; new 102.27 added....14146
102.28 Redesignated as 102.29; new 102.28 redesignated from 102.27....14146
102.29 Redesignated as 102.30; new 102.29 redesignated from 102.28....14146
102.30 Redesignated as 102.31; new 102.30 redesignated from 102.29....14146
(a) revised....14148
102.31 Redesignated as 102.32; new 102.31 redesignated from 102.30....14146
102.32 Redesignated as 102.33; new 102.32 redesignated from 102.31....14146
102.33 Redesignated as 102.34; new 102.33 redesignated from 102.32....14146
(a) amended....14148
102.34 Redesignated as 102.35; new 102.34 redesignated from 102.33....14146
(c) amended....14148

Page

102.35 Redesignated as 102.36; new 102.35 redesignated from 102.34....14146
102.36 Redesignated as 102.37; new 102.36 redesignated from 102.35....14146
(a) revised....14148
102.37 Redesignated from 102.36....14146
107 Authority citation revised....47032
107.1002 (e) revised....47032
107 Appendix I amended....47032, 47033
108.4 (c), (d) and (e) redesignated as (d), (e) and (f); new (c) added....15757
108.503-2 (d) and (e) added....45246
108.503-3 (c) revised....45246
108.503-5 (d)(2) amended....15757
108.507—108.507-5 Undesignated center heading and sections added....45246
120.102 Revised....45248
120.102-12 Added....45248
120.104-2 (b) revised....49423
120.403-2 Revised....49424
120.403-5 Revised....49424
121 Waiver....7479, 9112, 9113, 11372, 29346
Authority citation revised....25929
121.601 Table amended; Footnote 21 added; interim....4077
Table amended....25929
121.802 (a)(1) amended; (a)(2) revised....12335
121.910 (a) revised....25930
121.911 (a) revised....47371
121.2101—121.2106 Undesignated center heading and sections added....48956
122.7-3 (b) and (c) revised....49424
122.8-4 (d) revised....49424
122.61-10 (a) amended; (b) revised....49424
122.62 Added....45078
122.62-1 Added....45078
122.62-2 Added....45079
122.62-3 Added....45079
122.62-4 Added....45079
123 Authority citation revised....32055
123.9 (c) revised....32055
123.24 Heading revised; (g)(1) and (2) amended....32055
123.41 (h) revised....32055

Chapter 9—Department of Energy (Parts 900—999)

904.601 (c) amended 34364
904.601-70 (b) introductory text, (2) and (3)(ii) amended 36364
905.403 Amended 32307
905.403-70 Introductory text amended 32307
906.303-1(a) amended 36365
909.104-1 Regulation at 57 FR 32675 confirmed 48471
913.505-1 Heading and (a)(2) revised 36365
913.507 Added; interim 57639
Corrected 39679
915.504 (b)(6)(i) amended 32307
915.971-4 (f) amended 36365
915.971-5 (b) introductory text amended 36365
916.206 Removed 36365
916.206-3 Removed 36365
917.708 (b) removed 36365
922.103-5 Added 36151
922.473 (b) amended 36365
922.803 (d) amended 36365
922.804-2 (b)(3) amended 36365
922.7001 (c)(3), (e), (f)(1) and (h) amended 36365
922.7100—922.7101 (Subpart 922.71) Added; interim 57639
922.7101 Corrected 39679
923.570—923.570-3 (Subpart 923.5) Regulation at 57 FR 32676 confirmed 48471
925 Authority citation revised 8910
925.7000—925.7004 (Subpart 925.70) Added; interim 8910
Regulation at 58 FR 8910 confirmed 42688
933.170 (a) amended 32307
935.016-4 (d) removed; (e), (f) and (g) redesignated as (d), (e) and (f); new (f) revised 37870
935.016-5 Introductory text, (a), (b) introductory text and (c) introductory text amended; (a)(3), (b)(5) and (c)(1) revised; (b)(6) added 37870
935.016-6 (a) amended; (c) revised 37870
935.016-7 (a)(1), (2) and (4) revised; (d) concluding text, (f), (i)(2) and (j) amended; (i)(3) removed 37870
935.016-8 (c)(4) revised, (c) concluding text removed 37870
937.7010—937.7040 (Subpart 937.70) Added 36151
942.1004 Amended 32307
952 Authority citation revised 8910
952.219 Removed 36365
952.219-9 Removed 36365
952.222-70 Added; interim 57639
Corrected 39679
952.225-70 Added; interim 8911
Regulation at 58 FR 8911 confirmed 42688
952.237-70 Added 36152
Corrected 43287
952.250-70 Introductory text amended 32307
970.31 Heading amended 32308
970.72 Added 34926
970.1509-7 (a) and (c) amended 32308
970.1901 (a) amended 36365
970.2201 (b)(5)(ii) revised 36152
970.2270 (b)(2) introductory text amended 36365
970.2271 (b)(1), (2)(iv) and (3) amended 36365

Additions to Table I, September 1993

This table lists the sections of the U.S. Code, U.S. Statutes at Large, Public Laws, and Presidential documents which are being added to Table I as a result of authority citations carried in the **Federal Register** during January through September 1993. Recent legislation is carried by public law number.

Table I is in the CFR Index and Finding Aids revised as of January 1, 1993. Additions during 1992 are in the December 1992 LSA (List of CFR Sections Affected).

In order to determine the **Federal Register** page number of a parallel CFR citation, consult this LSA and the appropriate Annual Issue of the LSA for that CFR title.

Removals from Table I, September 1993

This table lists the sections of the U.S. Code, U.S. Statutes at Large, Public Laws, and Presidential documents which are being removed from Table I as a result of documents published in the **Federal Register** during January through September 1993.

Table I is in the CFR Index and Finding Aids revised as of January 1, 1993. Removals during 1992 are in the December 1992 LSA (List of CFR Sections Affected).

In order to determine the **Federal Register** page number of a parallel CFR citation, consult this LSA and the appropriate Annual Issue of the LSA for that CFR title.

LSA—LIST OF CFR SECTIONS AFFECTED

The LSA (List of CFR Sections Affected) is a monthly publication designed to lead users of the Code of Federal Regulations (CFR) to amendatory actions published in the Federal Register (FR). It should be shelved with current CFR volumes. Entries are by CFR title, chapter, part, and section. Proposed rules are listed at the end of appropriate titles.

HOW TO USE THIS FINDING AID

The CFR is revised annually according to the following schedule:

Titles 1-16—as of Jan. 1
17-27—as of April 1
28-41—as of July 1
42-50—as of Oct. 1

To bring these regulations up to date, consult the most recent LSA for any changes, additions, or removals published after the revision date of the volume you are using. Then check the CUMULATIVE LIST OF PARTS AFFECTED appearing in the Reader Aids of the latest Federal Register for less detailed but timely changes published after the final date included in this publication.

Boldface page numbers under a particular title indicate that the page numbers span 2 years. **Boldface** is used to distinguish the previous year from the current year.

Cite a page reference from this publication using the volume number (i.e. 58 FR for 1993) and the page number. Example: 24727 cite as 57 FR 24727. For your convenience, the volume number has been included in the Table of Federal Register Issue Pages and Dates.

ISSUES TO BE SAVED

There is no single annual issue of the LSA. Four ANNUAL ISSUES must be saved; the DECEMBER issue is the ANNUAL for Titles 1-16; the MARCH issue is the ANNUAL for Titles 17-27; the JUNE issue is the ANNUAL for Titles 28-41; the SEPTEMBER issue is the ANNUAL for Titles 42-50. ANNUAL ISSUES to be saved are clearly designated on the cover.

PARALLEL TABLE OF AUTHORITIES AND RULES

Following Title 50 is an update to Table I—Parallel Table of Authorities and Rules found in the CFR Index and Finding Aids. This table contains authority citations added to or removed from Table I as a result of documents published in the Federal Register since January 1, 1993.

TABLE OF FEDERAL REGISTER ISSUE PAGES AND DATES

A table is included at the end of this publication which identifies the volume number, the inclusive page numbers, and the corresponding Federal Register issue dates for the period covered.

INDEXES

An INDEX to the daily Federal Register is published monthly and is cumulated for 12 months. A separate volume, the CFR Index and Finding Aids to the entire Code of Federal Regulations, is revised as of January 1 each year.

INQUIRIES AND SUGGESTIONS

Brian Swidal was Chief Editor of the LSA. The LSA was prepared under the direction of Richard L. Claypoole, assisted by Laurice Clark, Ken Payne and Rob Sheehan. INQUIRIES, telephone 202-523-5227.

SUGGESTIONS concerning this and other publications of the Office are welcomed. Please send your suggestions to Martha L. Girard, Director, Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408.

CHECKLIST OF CFR VOLUMES FOR THIS MONTH—Continued

(Comprising a Complete CFR Set)

Title	Stock Number	Price	Revision Date
Individual copies		2.00	1992

[1]Because title 3 is an annual compilation, this volume and all previous volumes should be retained as a permanent reference source.

[2]The July 1, 1985 edition of 32 CFR parts 1—189 contains a note only for parts 1—39 inclusive. For the full text of the Defense Acquisition Regulations in parts 1—39, consult the three CFR volumes issued as of July 1, 1984, containing those parts.

[3]The July 1, 1985 edition of 41 CFR chapters 1—100 contains a note only for chapters 1 to 49 inclusive. For the full text of procurement regulations in chapters 1 to 49, consult the three CFR volumes issued as of July 1, 1984 containing those chapters.

[4]No amendments to this volume were promulgated during the period January 1, 1987 through December 31, 1992. The CFR volume issued as of January 1, 1987 should be retained.

[5]No amendments to this volume were promulgated during the period April 1, 1990 through March 30, 1993. The CFR volume issued as of April 1, 1990 should be retained.

[6]No amendments to this volume were promulgated during the period July 1, 1989 through June 30, 1992. The CFR volume issue as of July 1, 1989 should be retained.

Order from Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954. Charge orders (VISA, MasterCard, or GPO Deposit Account) may be telephoned to the GPO order desk at (202) 783-3238 from 8:00 a.m. to 4:00 p.m. eastern time, Monday-Friday (except holidays).

Chapter VII—Bureau of Export Administration, Department of Commerce (Parts 700—799)

770.2 Amended.....3222
770.4 Revised.....3222
770.10 (a) revised; interim.....57551
770.11 (a)(2)(i)(A) amended.....36354
770 Supplement No. 1 amended.....47053
Supplement No. 2 removed; interim.....57551
771 Authority citation revised.....488
771.3 Revised.....47052
771.4 (b) introductory text amended; (b)(2) added.....47050
771.7 Added.....488
771.14 (d)(3) amended.....47050
771.16 (b) revised.....47050
771.23 (b) amended.....486
771.28 Added.....47054
772.4 (b)(2)(iv)(A), (i)(1) introductory text and (6) amended; (i)(1)(i) revised.....36354
773.3 (a)(1)(ii), (d)(3)(iii)(D) and (e)(1)(ix)(I) amended.....486
773.7 (c)(2) heading, text, (d)(1) introductory text, (2)(i), (ii) heading, introductory text, (A), (C), (3) introductory text, (h)(1)(i) Footnote 2, (ii), (i) heading, introductory text, (1), (2), (4), (6), (k) introductory text and concluding text amended.....486
773.8 (a)(2) introductory text and (c)(1) amended.....487
773 Supplement No. 1 amended.....52169
774.2 (a)(1) amended.....47054
774.5 (a) amended.....486
775 Authority citation revised.....25554
775.1 (b) table amended.....25554, 47054
775.2 (e)(6) amended.....36355
(b)(1) amended.....47054
775.3 (b) revised.....25554
(h)(3) revised.....36355
775.6 (d) added.....36355
(c)(2) removed; (c)(3) and (4) redesignated as (c)(2) and (3) and revised; (d) added.....47052
775.7 (d) redesignated as (e); new (d) added.....36355
775.8 (d) redesignated as (e); new (d) added.....36355
Heading, (a) and (b)(2) revised; (d) amended.....47054
775.10 (b) through (g) redesignated as (c) through (h); new (b) added.....36355
Introductory text, (a), (b)(2) heading, introductory text, (c), (e), (f)(1) introductory text, (f)(2)(i) introductory text, (ii)(A), and (g)(1) introductory text amended.....47054
775 Supplement No. 1 amended.....25554, 47054

CHANGES JANUARY 4, 1993 THROUGH OCTOBER 29, 1993

5.100 Revised....17091
5.115 Amended....17093
10 Authority citation revised....49190
10.50 (c)(1) revised; (c)(20) and (21) added....49190
12.50 (a) and (c) amended....17096
14 Authority citation revised....41635
14.100 (c)(1)(ii) amended....17096

TITLE 21 Chapter I—Con. Page

(d)(4) added 41635
20 Technical correction 17096, 17097
20.108 (d) added 48794
(c) revised 48796
73 Technical correction 36134
73.3106 Revised 17507
Regulation at 58 FR 17507 effective date confirmed 41182
73.3121 Regulation at 58 FR 9541 effective date confirmed 41024
73.3127 (a), (b)(1) and (2) revised 17510
Regulation at 58 FR 3227 confirmed 33909
Regulation at 58 FR 17510 effective date confirmed 41183
74.101 (b) revised 17511
Regulation at 58 FR 17511 effective date confirmed 41183
74.1109 (b) amended 17098
74.2101 (a) revised 17511
Regulation at 58 FR 17511 effective date confirmed 41183
74.3206 (c)(1)(iv) and (v) amended; (c)(1)(vi) added 21542
Regulation at 58 FR 21542 effective date confirmed 45841
100 Technical correction 17096
100.2 (d), (f), (g) and (h) introductory text corrected 17097
100.100 (Subpart F) Added 27933
101 Technical correction 17085, 17096, 17099, 17100, 17101, 17102, 17343, 19876
Clarification 44033
101.2 (b) and (f) revised; eff. 5-8-94 44030
101.6 Removal at 58 FR 2850 effective date corrected to 5-8-93 17103
101.9 (b)(5)(iv) and (b)(7) amended; eff. 5-8-94 17086
Regulation at 58 FR 2478 effective date corrected to 5-8-94 17097
(c)(8)(iv) amended 17104
Regulation at 58 FR 2175 effective date corrected to 5-8-94 17328
(c)(1)(i)(A), (6)(iii), (7)(ii), (8)(i), (ii) introductory text, (B), (d)(8), (9)(i), (ii) and (iii) corrected 17328
(d)(12) sample label correctly revised 17329
(e) introductory text corrected; (e)(5) sample label correctly revised 17330
(f)(2)(ii), (iv), (g)(8), (9), (h)(3)(iv), (j)(4) and (13)(ii)(A) corrected; (j)(13)(ii)(A) sample label correctly revised 17331
(b) revised; eff. 5-8-94 44048
(a) introductory text and (d) amended; (c)(1)(i), (2), (8)(vi), (d)(1)(ii)(D), (iii), (7), (11), (e)(5) sample label, (f)(4), (5), (j)(1)(i), (2)(i), (ii), (iii), (j)(3)(v), (4), (5)(ii), (10), (13)(i), (ii)(A), (B), (C), (14) and (15)(iii) revised; (j)(2)(iv) redesignated as (j)(2)(v); (d)(13), (14) and new (j)(2)(iv) added; eff. 5-8-94 44076
101.10 Regulation at 58 FR 2410 effective date corrected in part to 5-8-94 and 5-8-95 17341
101.12 (a)(4) and (b) Table 1 corrected 17086
(b) Table 2 correctly added 17087
(h)(11)(i) corrected 17091
Revised; eff. 5-8-94 44051
101.13 Regulation at 58 FR 2410 effective date corrected in part to 5-8-94 and 5-8-95 17341
(i)(1), (2), (3), (j)(2)(i), (m)(1)(ii), (p)(1) and (q)(5)(i) corrected; effective in part 5-8-94 and 5-8-95 17342
(b)(4) added; (d)(2), (f), (g) introductory text, (1), (i)(2), (j)(1)(ii)(B), (l)(1)(ii) introductory text, (m)(1)(ii) introductory text and (q)(2) revised; (h)(1) amended; eff. 5-8-94 44030
101.14 (d)(2)(vii)(A) and (B) corrected 17097
(e)(6) revised 44038
101.25 Regulation at 58 FR 2413 effective date corrected to 5-8-94 17341
101.30 (e)(2) and (l) revised; (h)(1) table amended 44063
(m) added 49192

Additions to Table I, October 1993

This table lists the sections of the U.S. Code, U.S. Statutes at Large, Public Laws, and Presidential documents which are being added to Table I as a result of authority citations carried in the **Federal Register** during January through October 1993. Recent legislation is carried by public law number.

Table I is in the CFR Index and Finding Aids revised as of January 1, 1993. Additions during 1992 are in the December 1992 LSA (List of CFR Sections Affected).

In order to determine the **Federal Register** page number of a parallel CFR citation, consult this LSA and the appropriate Annual Issue of the LSA for that CFR title.

Removals from Table I, October 1993

This table lists the sections of the U.S. Code, U.S. Statutes at Large, Public Laws, and Presidential documents which are being removed from Table I as a result of documents published in the **Federal Register** during January through October 1993.

Table I is in the CFR Index and Finding Aids revised as of January 1, 1993. Removals during 1992 are in the December 1992 LSA (List of CFR Sections Affected).

In order to determine the **Federal Register** page number of a parallel CFR citation, consult this LSA and the appropriate Annual Issue of the LSA for that CFR title.

LSA—LIST OF CFR SECTIONS AFFECTED

The LSA (List of CFR Sections Affected) is a monthly publication designed to lead users of the Code of Federal Regulations (CFR) to amendatory actions published in the Federal Register (FR). It should be shelved with current CFR volumes. Entries are by CFR title, chapter, part, and section. Proposed rules are listed at the end of appropriate titles.

HOW TO USE THIS FINDING AID

The CFR is revised annually according to the following schedule:

Titles 1-16—as of Jan. 1
17-27—as of April 1
28-41--as of July 1
42-50—as of Oct. 1

To bring these regulations up to date, consult the most recent LSA for any changes, additions, or removals published after the revision date of the volume you are using. Then check the CUMULATIVE LIST OF PARTS AFFECTED appearing in the Reader Aids of the latest Federal Register for less detailed but timely changes published after the final date included in this publication.

Boldface page numbers under a particular title indicate that the page numbers span 2 years. **Boldface** is used to distinguish the previous year from the current year.

Cite a page reference from this publication using the volume number (i.e. 58 FR for 1993) and the page number. Example: 24727 cite as 57 FR 24727. For your convenience, the volume number has been included in the Table of Federal Register Issue Pages and Dates.

ISSUES TO BE SAVED

There is no single annual issue of the LSA. Four ANNUAL ISSUES must be saved; the DECEMBER issue is the ANNUAL for Titles 1-16; the MARCH issue is the ANNUAL for Titles 17-27; the JUNE issue is the ANNUAL for Titles 28-41; the SEPTEMBER issue is the ANNUAL for Titles 42-50. ANNUAL ISSUES to be saved are clearly designated on the cover.

PARALLEL TABLE OF AUTHORITIES AND RULES

Following Title 50 is an update to Table I—Parallel Table of Authorities and Rules found in the CFR Index and Finding Aids. This table contains authority citations added to or removed from Table I as a result of documents published in the Federal Register since January 1, 1993.

TABLE OF FEDERAL REGISTER ISSUE PAGES AND DATES

A table is included at the end of this publication which identifies the volume number, the inclusive page numbers, and the corresponding Federal Register issue dates for the period covered.

INDEXES

An INDEX to the daily Federal Register is published monthly and is cumulated for 12 months. A separate volume, the CFR Index and Finding Aids to the entire Code of Federal Regulations, is revised as of January 1 each year.

INQUIRIES AND SUGGESTIONS

Brian Swidal was Chief Editor of the LSA. The LSA was prepared under the direction of Richard L. Claypoole, assisted by Laurice Clark, Ken Payne and Rob Sheehan. INQUIRIES, telephone 202-523-5227.

SUGGESTIONS concerning this and other publications of the Office are welcomed. Please send your suggestions to Martha L. Girard, Director, Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408.

Individual copies		2.00	1992

[1]Because title 3 is an annual compilation, this volume and all previous volumes should be retained as a permanent reference source.

[2]The July 1, 1985 edition of 32 CFR parts 1—189 contains a note only for parts 1—39 inclusive. For the full text of the Defense Acquisition Regulations in parts 1—39, consult the three CFR volumes issued as of July 1, 1984, containing those parts.

[3]The July 1, 1985 edition of 41 CFR chapters 1—100 contains a note only for chapters 1 to 49 inclusive. For the full text of procurement regulations in chapters 1 to 49, consult the three CFR volumes issued as of July 1, 1984 containing those chapters.

[4]No amendments to this volume were promulgated during the period January 1, 1987 through December 31, 1992. The CFR volume issued as of January 1, 1987 should be retained.

[5]No amendments to this volume were promulgated during the period April 1, 1990 through March 30, 1993. The CFR volume issued as of April 1, 1990 should be retained.

Order from Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954. Charge orders (VISA, MasterCard, or GPO Deposit Account) may be telephoned to the GPO order desk at (202) 783-3238 from 8:00 a.m. to 4:00 p.m. eastern time, Monday-Friday (except holidays).

51.351 (a)(7)(iv), (v) and (vi) revised....59367
51.353 (a) amended....59367
51.359 (e)(1) amended....59367
51.360 (a)(8) revised....59367
51.373 (a) amended....59367
51.350—51.373 (Subpart S) Appendixes A, D and E amended....59367
51.390—51.464 (Subpart T) Added....62216
51.850—51860 (Subpart W) Added (OMB number pending)....63247
51 Appendix W added....38822
52 Authority citation revised....38883
State implementation plan determinations...41430, 42671, 50516, 52237
Authority delegation notice....43798
Technical correction....61143
52.21 (l)(1) revised; (l)(2) amended....38883
52.50 (c)(61) added....45440
(c)(56) and (57) added....50266
52.70 (c)(17) added....43085
52.219 Added....62533
52.220 (c)(182)(i)(B)(*5*), (183)(i)(A)(*9*), (F), and (185)(i)(B)(*4*) added....37423
(c)(183)(i)(A)(*11*), (C)(*4*) and (*6*) added....45442
(c)(179)(i)(C), (182)(i)(B)(*3*), (i)(C) and (183)(i)(E)(*2*) added....45443
(c)(182)(i)(A)(*2*) added....45445
(c)(182)(i)(A)(*3*) and (185)(i)(B)(*5*) added....45447
(c)(183)(i)(A)(*6*) added....47832
(c)(184)(i)(B)(*3*) added....50851
52.320 (c)(59) added....50270
52.329 (a)(3) removed....50271
52.346 Added....49435
52.420 (c)(45) added....40066
52.422 Existing text redesignated as (a); (b) added....50848
52.520 (c)(76) added....37660
52.670 (c)(26) and (27) added....39447
52.679 Revised....39448
52.681 Revised....39450
52.683 Revised....39450
52.720 (c)(96) added....45450
(c)(7) added....47382
(c)(98) added....48314
(c)(95) added....54294
52.744 Added....45451

52.770 (c)(88) added....43083
52.786 (h) added....62535
52.798 Added....46544
52.820 (c)(58) added....50268
52.920 (c)(68) added....54521
52.934 Added....54522
52.970 (c)(59) added....38060
52.1070 (c)(93) through (96) added....40062
(c)(98) added....63086
52.1073 (f) added....50848
52.1120 (c)(98) added....48317
52.1167 Table amended....48318
52.1174 Regulation at 58 FR 34227 withdrawn....44456
52.1320 (c)(84) added....45452
(c)(82) added....57566
52.1420 (c)(40) added....45454
52.1620 (c)(50) added....47385
(c)(52) added....62539
52.1670 (c)(84) added....40058
(c)(85) added....40064
(c)(86) added....50852
52.1679 Table amended....40065
52.1770 (c)(66) added....47396
52.1820 (c)(24) added....54043
52.1870 (c)(83) added....47214
(c)(94) added....54516
52.1879 (e) removed....47214
52.1881 (b)(23) revised....46869
52.1882 (l) added....46871
52.1920 (c)(43) added....38062
52.1970 (c)(96) added....47387
(c)(100) added....50850
52.1977 Revised....47387
52.1987 Revised....47391
52.1988 (b) revised....47391
52.2020 (c)(84) added....50518
(c)(87) added....53885
(c)(85) added....57563
52.2170 (c)(14) added....37425
52.2183 Added....37426
52.2220 (c)(111) added....50273
52.2270 (c)(76) added....45456
52.2420 (c)(98) added....45459
52.2423 (j) added....50848
52.2470 (c)(39) added....37427
(c)(41) added....40057
(c)(40) added....40060
52.2479 Revised....37427
52.2560 Added....48312
52.2570 (c)(69) added....43082
55 Petition for reconsideration....61027
55.14 (e)(3)(ii)(E), (F) and (H) revised....44617

CHANGES JULY 1, 1993 THROUGH NOVEMBER 30, 1993

TITLE 40 Chapter I—Con. Page

(e)(6)(i)(A) revised....59173
55.15 Regulation at 58 FR 14159 effective date corrected to 9-4-92....47398
55 Appendix A amended....44617, 59173
60 Authority citation revised....40591
60.17 (a)(6) and (38) amended....45962
60.700—60.708 (Subpart RRR) Added (OMB number pending)....45962
60.735 (b) and (c)(2) amended....40591
(c)(3) amended....40592
61 Clarification....51784
63.74 (d)(2) revised; (d)(4) and (i) removed; Table 1 amended....62543
63.75 (f) added....62543
63.77 Revised....62543
63.90—63.96 (Subpart E) Added....62283
63.300—63.313 (Subpart L) Added....57911
63.320—63.325 (Subpart M) Added....49376
63 Appendix A amended....57924
69 Authority citation revised....43043
69.11 (a) and (b) added....43043
72.2 Corrected....40746, 40747
72.8 (c)(2)(ii) corrected....40747
72.41 (e)(3)(iii) and (iv) corrected....40747
72.74 (b)(1)(iii) corrected....40747
72.91 (a) introductory text and (3)(iii) corrected....40747
72.92 (c)(2)(v)(C) corrected....40747
73 Notice of procedure....48318
73.10 (a) Table 1 corrected....40747
73.30 (a) corrected....40747
73.31 (c)(1) introductory text corrected....40747
73.32 (a)(1) corrected....40747
73.72 Technical correction....40747
73.80 (b) corrected....40747
73.81 (b)(4) corrected....40747
73.82 Heading corrected....40747
75.1 (b) existing text designated as (b)(1) and (2); new (b)(2) corrected....40747
75.5 (b) corrected....40747
75.6 (a)(4) corrected....40747
75.7 Corrected....40747
75.11 (c) introductory text corrected....40747
75.15 (a) introductory text, (2) and (b)(1) corrected....40747

Page

75.16 (e) corrected....40747
75.17 (a)(2)(iii)(a) correctly designated as (a)(2)(iii)(A)....40747
(a)(2)(iii)(B) and (b)(2) corrected....40748
75.20 (b)(3), (c) introductory text, (9)(i) introductory text, (B) and (d) corrected; (c)(5)(iv) correctly added....40748
75.31 (b)(2), (c)(2) and (3) corrected....40748
75.32 (b) corrected....40748
75.34 (b)(1) corrected....40748
75.41 (a)(9)(i), (ii), (b)(1)(i), (2)(i), (iv)(A), (C), (v)(A), (B), (c)(1)(i), (ii) and (2)(i) corrected....40748
75.48 (a)(3) corrected....40748
75.50 (b) introductory text, (6), (c)(1)(iii), (iv), (vi), (2)(iii), (iv), (v), (vii), (3)(ii), (iii), (iv) Table 3, (d) introductory text, (3) through (9), (e)(1)(iii), (iv), (v), (vii), (viii), (2)(ii), (iv) and (v) corrected....40749

Added....58405
85.2216 Redesignated as 85.2229; new 85.2216 redesignated from 85.2214....58403
(a), (b) and (c) redesignated as (b), (c) and (d); heading, new (c)(6) and (7) revised; new (a) added....58407
85.2217 Redesignated as 85.2232....58403

Page

Added....58407
85.2218 Redesignated as 85.2237....58403
Added....58408
85.2219 Added....58409
85.2220 Added....58411
85.2224 Redesignated from 85.2215....58403
Heading revised; (a) and (b) redesignated as (b) and (c); new (a) added....58412
85.2225 Added....58413
85.2229 Redesignated from 85.2216....58403
Heading revised; (a) and (b) redesignated as (b) and (c); new (a) added....58414
85.2230 Added....58414
85.2232 Redesignated from 85.2217....58403
(a) through (e) redesignated as (b) through (f); heading and new (f)(1) revised; new (a) added....58415
85.2233 Added....58415
85.2237 Redesignated from 85.2218....58403
Heading revised; (a), (b) and (c) redesignated as (b), (c) and (d); new (a) added....58416
85.2238 Added....58416
86.1 (b)(1) table amended....58417
86.096-2 Amended....58417
86.096-3 Added....58417
86.096-8 (a)(1)(iii) and (3) added....58417
86.096-9 (a)(1)(v) and (3) added....58417
86.096-21 (j) and (k) added....58417
86.096-24 Added....58417
86.096-35 (a)(1)(iii)(N) and (2)(iii)(P) added....58421
86.097-9 (a)(1)(iv) and (3) added....58421
86.099-8 (a)(1)(iii) and (3) added....58421
86.099-9 (a)(1)(iv) and (3) added....58422
86.116-90 (c)(5) added; (d)(1) removed....58422
86.123-78 (a) introductory text revised....58422
86.142-90 (d) through (i), (k), (l), (m), (o) and (p) revised; (q) and (r) removed....58422

CHANGES JULY 1, 1993 THROUGH NOVEMBER 30, 1993

TITLE 40 Chapter I—Con. Page

86.210-96 Added....58424
86.301-79—86.348-79 (Subpart D) Heading revised....58422
86.319-79 (b) revised....58422
86.332-79 (a) revised; (d) and (e) removed....58423
86.516-90 (c)(3) added; (d)(1) removed....58423
86.523-78 (a) introductory text revised....58423
86.608-96 Added....58423
86.609-96 Added....58423
86.610-96 Added....58424
86.708-94 (a)(1)(iii) and (3) added....58424
86.708-98 (a)(1)(iii) and (3) added....58424
86.709-94 (a)(1)(v) and (3) added....58424
86.709-99 (a)(1)(iv) and (3) added....58425
86.1008-96 Added....58425
86.1009-96 Added....58425
86.1010-96 Added....58426
86.1316-90 (b)(3) added and (c)(1) removed....58426
86.1323-84 (a) introductory text revised....58426
86.1401—86.1442 (Subpart O) Added....58426
93 Added....62235
93.150—93.160 (Subpart B) Added (OMB number pending)....63253
110 Technical correction....48424
110.1 Amended....45036
112 Technical correction....48424
112.2 (k) amended....45037
116 Technical correction....48424
116.3 Amended....45037
117 Technical correction....48424
117.1 Amended....45037
122 Technical correction....48424
122.2 Amended....45037
131.36 (d)(14)(ii) amended....36142
141.30 (e)(3) and (4) added; (e) amended....41345
165 Policy statement....43994
180.138 Removed....46088
180.206 Revised....62038
180.227 (c) added....62041
180.234 Removed....60559
180.271 Removed....44283
180.281 Removed....47216
180.319 Table amended....39154, 46088
180.335 Removed....39154
180.356 (a) designation and (b) removed; table amended....36361
180.362 Heading revised; (b) table amended....48321

Additions to Table I, November 1993

This table lists the sections of the U.S. Code, U.S. Statutes at Large, Public Laws, and Presidential documents which are being added to Table I as a result of authority citations carried in the **Federal Register** during January through November 1993. Recent legislation is carried by public law number.

Table I is in the CFR Index and Finding Aids revised as of January 1, 1993. Additions during 1992 are in the December 1992 LSA (List of CFR Sections Affected).

In order to determine the **Federal Register** page number of a parallel CFR citation, consult this LSA and the appropriate Annual Issue of the LSA for that CFR title.

Removals from Table I, November 1993

This table lists the sections of the U.S. Code, U.S. Statutes at Large, Public Laws, and Presidential documents which are being removed from Table I as a result of documents published in the **Federal Register** during January through November 1993.

Table I is in the CFR Index and Finding Aids revised as of January 1, 1993. Removals during 1992 are in the December 1992 LSA (List of CFR Sections Affected).

In order to determine the **Federal Register** page number of a parallel CFR citation, consult this LSA and the appropriate Annual Issue of the LSA for that CFR title.

LSA—LIST OF CFR SECTIONS AFFECTED

The LSA (List of CFR Sections Affected) is a monthly publication designed to lead users of the Code of Federal Regulations (CFR) to amendatory actions published in the Federal Register (FR). It should be shelved with current CFR volumes. Entries are by CFR title, chapter, part, and section. Proposed rules are listed at the end of appropriate titles.

HOW TO USE THIS FINDING AID

The CFR is revised annually according to the following schedule:

Titles 1-16—as of Jan. 1
17-27—as of April 1
28-41—as of July 1
42-50—as of Oct. 1

To bring these regulations up to date, consult the most recent LSA for any changes, additions, or removals published after the revision date of the volume you are using. Then check the CUMULATIVE LIST OF PARTS AFFECTED appearing in the Reader Aids of the latest Federal Register for less detailed but timely changes published after the final date included in this publication.

Boldface page numbers under a particular title indicate that the page numbers span 2 years. **Boldface** is used to distinguish the previous year from the current year.

Cite a page reference from this publication using the volume number (i.e. 58 FR for 1993) and the page number. Example: 24727 cite as 57 FR 24727. For your convenience, the volume number has been included in the Table of Federal Register Issue Pages and Dates.

ISSUES TO BE SAVED

There is no single annual issue of the LSA. Four ANNUAL ISSUES must be saved; the DECEMBER issue is the ANNUAL for Titles 1-16; the MARCH issue is the ANNUAL for Titles 17-27; the JUNE issue is the ANNUAL for Titles 28-41; the SEPTEMBER issue is the ANNUAL for Titles 42-50. ANNUAL ISSUES to be saved are clearly designated on the cover.

PARALLEL TABLE OF AUTHORITIES AND RULES

Following Title 50 is an update to Table I—Parallel Table of Authorities and Rules found in the CFR Index and Finding Aids. This table contains authority citations added to or removed from Table I as a result of documents published in the Federal Register since January 1, 1993.

TABLE OF FEDERAL REGISTER ISSUE PAGES AND DATES

A table is included at the end of this publication which identifies the volume number, the inclusive page numbers, and the corresponding Federal Register issue dates for the period covered.

INDEXES

An INDEX to the daily Federal Register is published monthly and is cumulated for 12 months. A separate volume, the CFR Index and Finding Aids to the entire Code of Federal Regulations, is revised as of January 1 each year.

INQUIRIES AND SUGGESTIONS

Brian Swidal was Chief Editor of the LSA. The LSA was prepared under the direction of Richard L. Claypoole, assisted by Laurice Clark, Ken Payne and Rob Sheehan. INQUIRIES, telephone 202-523-5227.

SUGGESTIONS concerning this and other publications of the Office are welcomed. Please send your suggestions to Martha L. Girard, Director, Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408.

[1]Because title 3 is an annual compilation, this volume and all previous volumes should be retained as a permanent reference source.

[2]The July 1, 1985 edition of 32 CFR parts 1—189 contains a note only for parts 1—39 inclusive. For the full text of the Defense Acquisition Regulations in parts 1—39, consult the three CFR volumes issued as of July 1, 1984, containing those parts.

[3]The July 1, 1985 edition of 41 CFR chapters 1—100 contains a note only for chapters 1 to 49 inclusive. For the full text of procurement regulations in chapters 1 to 49, consult the three CFR volumes issued as of July 1, 1984 containing those chapters.

[4]No amendments to this volume were promulgated during the period January 1, 1987 through December 31, 1992. The CFR volume issued as of January 1, 1987 should be retained.

[5]No amendments to this volume were promulgated during the period April 1, 1990 through March 30, 1993. The CFR volume issued as of April 1, 1990 should be retained.

Order from Superintendent of Documents, Attn: New Orders, PO Box 371954, Pittsburgh, PA 15250-7954. Charge orders (VISA, MasterCard, or GPO Deposit Account) may be telephoned to the GPO order desk at (202) 783-3238 from 8:00 a.m. to 4:00 p.m. eastern time, Monday-Friday (except holidays).

1126.53 Revised..... 63292
1126.60 (d) and (f) revised; (g) and (h) amended; (i), (j) and (k) added..... 27890
1126.76 (a)(3) and (5) revised; (c) added..... 27890
1126.85 (c) revised..... 27891
1131.15 Revised..... 27891
1131.16 Revised..... 27891
1131.19 Added..... 27891
1131.40 Revised..... 27891
(c)(1)(iii) revised; (d) added..... 63292
1131.42 (a)(1) amended; (d)(2)(vi) and (vii) revised..... 27892
1131.43 (d) added..... 27892
(e) added..... 63292
1131.44 (a)(2), (6), (7)(i) and (9) revised; (a)(5), (7)(v), (8)(i), (ii) introductory text and (11) introductory text amended..... 27892
1131.45 (b) revised..... 27892
1131.50 (d) added..... 63292
1131.53 Revised..... 63292
1131.60 (d) and (f) revised; (g), (h) and (i) added..... 27893
1131.76 (a)(3) and (5) revised; (c) added..... 27893
1131.85 (a)(2) revised..... 27893
1134.15 Revised..... 27893
1134.16 Revised..... 27894
1134.20 Added..... 27894
1134.40 Revised..... 27894
1134.42 (a)(1) amended; (d)(2)(vi) and (vii) revised..... 27895
1134.43 (d) added..... 27895
1134.44 (a)(2), (6), (7)(i) and (9) revised; (a)(5), (7)(v), (8)(i), (ii) introductory text and (11) introductory text amended..... 27895
1134.45 (b) revised..... 27895
1134.60 (d), (f) and (g) revised; (h) and (i) added..... 27895
1134.76 (a)(3) and (5) revised; (c) added..... 27896
1134.85 (b) revised..... 27896
1135.15 Revised..... 27896
1135.16 Revised..... 27896
1135.20 Added..... 27896
1135.40 Revised..... 27897
(c)(1)(iii) revised; (d) added..... 63292
1135.42 (a)(1) amended; (d)(2)(vi) and (vii) revised..... 27897
1135.43 (d) added..... 27897

TITLE 7 Chapter X—Con. Page
(e) added....63292
1135.44 (a)(2), (6), (7)(i) and (9) revised; (a)(5), (7)(v), (8)(i), (ii) introductory text and (11) introductory text amended....27898
1135.45 (b) revised....27898
1135.50 (d) added....63292
1135.53 Revised....63292
1135.60 (d) and (f) revised; (g), (h) and (i) added....27898
1135.76 (a)(3) and (5) revised; (c) added....27898
1135.85 (b) revised....27899
1137.7 (b) suspended in part through 2-94....40730
1137.12 (a)(1) suspended in part through 8-94....40730
1137.15 Revised....27899
1137.16 Revised....27899
1137.20 Added....27899
1137.40 Revised....27899
1137.42 (a)(1) amended; (d)(2)(vi) and (vii) revised....27900
1137.43 (d) added....27900
1137.44 (a)(2), (6), (7)(i) and (9) revised; (a)(5), (7)(v), (8)(i), (ii) introductory text and (11) introductory text amended....27900
1137.45 (b) revised....27901
1137.60 (d), (f) and (g) revised; (h) and (i) added....27901
1137.76 (a)(3) and (5) revised; (c) added....27901

1138.7 (a)(1) and (c) suspended in part; eff. through 9-30-95....57962
1138.13 (d)(1), (2) and (5) suspended; eff. through 9-30-95....57962
1138.15 Revised....27902
1138.16 Revised....27902
1138.21 Added....27902
1138.40 Revised....27902
(c)(1)(iii) revised; (d) added....63292
1138.42 (a)(1) amended; (d)(2)(vi) and (vii) revised....27903
1138.43 (d) added....27903
(e) added....63292
1138.44 (a)(2), (6), (7)(i) and (9) revised; (a)(5), (7)(v), (8)(i), (ii) introductory text and (11) introductory text amended....27903
1138.45 (b) revised....27903
1138.50 (d) added....63292
1138.54 Revised....63292
1138.60 (d) and (f) revised; (g) amended; (h), (i) and (j) added....27904
1138.76 (a)(3) and (5) revised; (c) added....27904
1138.85 (c) revised....27904
1139.10 (b)(1)(ii) revised....43235
1139.13 (d)(1) and (2) revised....32435
1139.15 Revised....27904
1139.16 Revised....27905
1139.21 Added....27905
1139.40 Revised....27905
1139.42 (a)(1) amended; (d)(2)(vi) and (vii) revised....27905
1139.43 (d) added....27906
1139.44 (a)(2), (6), (7)(i) and (9) revised; (a)(5), (7)(v), (8)(i), (ii) introductory text and (11) introductory text amended....27906
1139.45 (b) revised....27906
1139.50 (d), (e) and (f) revised....32436
1139.53 Revised....32436
1139.60 (e) and (g) revised; (j), (k) and (l) added....27906
1139.61 (a) amended....27907
1139.71 (a) introductory text revised; (c) added....32436
1139.72 Revised....32436
1139.74 (c) introductory text and (e) revised....32436
1139.75 (a) revised....32436
1139.76 (a)(1)(iii) and (v) revised; (c) added....27907
1139.85 (b) revised....27907
1160 Added....46763, 62503

Chapter XI—Agricultural Marketing Service (Marketing Agreements and Orders; Miscellaneous Commodities), Department of Agriculture (Parts 1200—1299)

1205 Technical correction....58231
1205.510 (b)(2) and (3) revised....52216
1207.510 (b)(1), (2), (3) and (c) revised....3359
1209.1—1209.77 (Subpart A) Added....3449

Page
1209.200—1209.280 (Subpart B) Added; interim....8197
1210.401 (f) amended....3355
1210.403 (h) revised....3355
1210.404 Removed....3356
1210.517 (a)(3) through (11) redesignated as (a)(4) through (12); new (a)(3) added; new (a)(9) and new (10) revised....3356
1210.540 Revised (OMB number)....3356
1211 Authority citation revised....41024
1211.51 (g) suspended through 10-31-93; interim....41024
1211.251 (h) introductory text revised....3362
1211.300—1211.310 (Subpart D) Added; interim....38280
Regulation at 58 FR 38280 confirmed....51570
1212.251 (i) introductory text revised....3366
1220 Authority citation revised....32437
1220.312 (d) revised; interim....40732
Regulation at 58 FR 40732 confirmed; eff. 1-10-94....64672
1220.315 Removed; interim....40732
Regulation at 57 FR 40732 confirmed; eff. 1-10-94....64672
1220.400—1220.402 (Subpart C) Added; interim....32438
Regulation at 58 FR 32438 confirmed....47984
1220.501—1220.537 (Subpart E) Added....60546
1230.110 Revised....17205
1250.519 Added....34697
1260.141 (a) revised....12999

Chapter XIV—Commodity Credit Corporation, Department of Agriculture (Parts 1400—1499)

1410.13 (a) removed; (b), (c) and (d) redesignated as (a), (b) and (c)....4064

Chapter I—Animal and Plant Health Inspection Service, Department of Agriculture (Parts 1—199)

Chapter 1 Policy statement....47206
1 Authority citation revised....39129
1.1 Amended....39129
2 Authority citation revised....39129
2.35 (e) amended....39129
2.38 (k)(4) added....39129
2.75 (a)(4) amended....39129
(a)(4) corrected....45041
2.133 Added....39129
50.1 Amended....34698
50.14 (c) revised....34699
51.3 Amended; CFR correction....47984
77.1 Amended; interim....34700
78.1 Amended....48445
78.41 (a) and (b) amended; interim....4361
Regulation at 58 FR 4361 confirmed....36593
78.43 Amended; interim....11365, 28343, 68506
Regulation at 58 FR 11365 confirmed....34700
Regulation at 58 FR 28343 confirmed....43069
85.1 Amended; eff. 1-27-94....68507
91.14 (a)(10)(i) and (13) removed; (a)(10)(ii) and (14) through (17) redesignated as (a)(10)(i) and (13) through (16); new (a)(10)(i)(A) amended; new (a)(16)(ii)(A) removed; new (a)(16)(ii)(B) redesignated as (a)(16)(ii)(A) and revised; new (a)(16)(iv) and (A) added....37640
(a)(5)(i) introductory text revised; (a)(10) through (16) redesignated as (a)(11) through (17); new (a)(10) added....58099
92 Authority citation revised....38957, 45237
92.102 (a) amended....37642
92.106 (d)(2) revised....38957
92.203 (d) amended....37642
92.303 (c) amended....45237
92.308 (a) introductory text and (1) amended....45238
92.323 Heading revised; (a) and (b) amended....45238
92.324 Heading revised; text amended....45238
92.326 Amended....45238
92.400 Amended; eff. 1-27-94....68509
92.403 (e) amended....38283
92.406 (a) amended; eff. 1-27-94....68509
92.418 Heading and (a) amended; (a) heading revised; (b)(2)(ii)(C) redesignated as (b)(2)(ii)(D); new (b)(2)(ii)(C) added....37641
92.427 (c)(1), (d) introductory text, (2) and (e)(2) amended; eff. 1-27-94....68509
92.503 (e) amended....38283
94 Authority citation revised....58753
94.1 (a)(2) amended....11367, 58753
(a)(2) and (d)(1) amended....28344
(a)(2) revised; (d)(1) amended....36596
94.5 (h)(10) and (i) added; eff. 1-19-94....66248
94.9 (a) amended....11367
94.10 (a) amended....11367
94.11 (a) amended....11367, 28344, 36596
94.12 (a) amended....11367
Regulation at 58 FR 11367 withdrawn....13698
(a) amended....36596

150-258 O - 94 - 3 (3)

TITLE 9 Chapter I—Con. Page
94.13 Introductory text amended....11367
Regulation at 58 FR 11367 withdrawn....13698
Regulation at 57 FR 62177 confirmed....36594
Introductory text amended....36596
94.18 (a) revised; interim....4308, 65104
Regulation at 58 FR 4308 confirmed....36594
94.19 Added....50251
96 Authority citation revised....47030
96.2 Redesignated as 96.3; new 96.2 added; interim....47031
96.3 Redesignated as 96.4; new 96.3 redesignated from 96.2; interim....47031
96.4 Redesignated as 96.5; new 96.4 redesignated from 96.3 and amended; interim....47031
96.5 Redesignated as 96.6; new 96.5 redesignated from 96.4; interim....47031
96.6 Redesignated as 96.7; new 96.6 redesignated from 96.5; interim....47031
96.7 Redesignated as 96.8; new 96.7 redesignated from 96.6; interim....47031
96.8 Redesignated as 96.9; new 96.8 redesignated from 96.7; interim....47031
96.9 Redesignated as 96.10; new 96.9 redesignated from 96.8; interim....47031
96.10 Redesignated as 96.11; new 96.10 redesignated from 96.9; (c)(1) amended; interim....47031
96.11 Redesignated as 96.12; new 96.11 redesignated from 96.10; interim....47031
96.12 Redesignated as 96.13; new 96.12 redesignated from 96.11 and amended; interim....47031
96.13 Redesignated as 96.14; new 96.13 redesignated from 96.12; interim....47031
96.14 Redesignated as 96.15; new 96.14 redesignated from 96.13; interim....47031
96.15 Redesignated as 96.16; new 96.15 redesignated from 96.14; interim....47031
96.16 Redesignated from 96.15; interim....47031
97.1 (a) introductory text and (3) amended....32434
97.2 Table amended....28345
98.31 Amended....37643
98.33 (a) and (b) redesignated as (d) and (e); heading and new (d) revised; new (a), (b) and (c) added....37643
98.34 (a)(1) amended....37644
98.35 Heading revised; (a) amended; (c) and (d) added....37644
98.36 Revised....37644
98.37 Removed....37644
98.38 Removed....37644
98.39 Removed....37644
113.46 (b)(2) revised....50252
124 Added....11369
124.23 (b) corrected....29028
130 Authority citation revised....38957, 67654
130.1 Amended....38957
Amended; eff. 1-21-94....67654
130.2 (a) amended....38958
(a) table amended; eff. 1-21-94....67654
130.3 (a) amended....38958
Heading and (a) revised; (c) redesignated as (c)(1); (c)(2) and (3) added; OMB number; eff. 1-21-94....67654
130.4 Revised....38958
130.5 (a) revised....38958
(b) revised; eff. 1-21-94....67655
130.6 (a) and (b)(1) amended....38958
Redesignated as 130.20; new 130.6 added; OMB number; eff. 1-21-94....67655
130.7 (a) introductory text revised....38958
Redesignated as 130.21; new 130.7 added; OMB number; eff. 1-21-94....67655
130.8 Redesignated as 130.22; new 130.8 added; OMB number; eff. 1-21-94....67655
130.9 Redesignated as 130.23; eff. 1-21-94....67655
Added (OMB number); eff. 1-21-94....67656
130.14 Added....38958
130.15 Added....38958
130.16 Added....38959

Page
130.17 Added....38959
130.18 Added....38960
130.20 Redesignated from 130.6; eff. 1-21-94....67655
(d) added; OMB number; eff. 1-21-94....67656
130.21 Redesignated from 130.7; eff. 1-21-94....67655
Heading and (b) revised; (a)(1), (2) and (3) amended; (a)(4), (5) and (c) added; OMB number; eff. 1-21-94....67656
130.22 Redesignated from 130.8; eff. 1-21-94....67655
130.23 Redesignated from 130.9; eff. 1-21-94....67655
130.50 (a)(1) and (2) revised; (a)(3) and (4) amended; (a)(5) and (6) added....38960
(a)(3) revised; (a)(5) and (6) amended; (a)(7), (8) and (9) added; eff. 1-21-94....67656
130.51 (a) and (c) revised; (b)(1) and (2) amended; (b)(3) and (4) added....38960
156 Authority citation revised....67656
156.7 Amended; heading revised; eff. 1-21-94....67656
161.3 (f) corrected....8820

Chapter II—Packers and Stockyards Administration, Department of Agriculture (Parts 200—299)

201.56 (b), (c) and (d) revised; (e) removed....52886
201.64 Removed....52886
201.66 Removed....52886
201.72-1 Removed....52886
201.78-1 Removed....52886
201.106-1 Removed....52886
201.106-2 Removed....52886
203.14 Revised....52886
Corrected....58902

Chapter III—Food Safety and Inspection Service, Meat and Poultry Inspection, Department of Agriculture (Parts 300—399)

317.1—317.24 Designated as Subpart A; eff. 7-6-94....664
317.2 (f)(1)(vi) added....38048
(f)(1)(vi)(B) corrected....40468
(j)(3) amended....42189
(l) added; interim....43489
(l) revised....52872
(l) removed....58919
317.5 (b)(12) and (13) amended; (b)(14) added....43489
(b)(12) and (13) amended; (b)(14) removed....58919
317.300—317.400 (Subpart B) Added; eff. 7-6-94....664
317.309 (b), (f)(1), (g)(1) and (h)(5) corrected....43788
(g)(1) amended; interim....47627
317.312 (b) Table 2 corrected....43788
(b) Tables 1 and 2 amended; interim....47627
317.313 (i) and (p) corrected....43788
(a) and (q)(3) revised; interim....47627
317.345 (a)(1) amended; interim....47627
317.354 Corrected....43788
317.356 (a) corrected....43788
317.360 Corrected....43788
317.361 Corrected....43788
317.362 (a) corrected....43788
(c)(1) amended; interim....47627
317.380 (c) corrected....43788
(e) and (f) added; interim....47627
Corrected....66075
317.400 (a)(1)(iii) and (d) added; interim....47627
318 Authority citation revised....65260
318.7 (c)(4) table amended....4070, 42189, 45239, 45242, 45243, 59935
(c)(4) table amended; eff. 1-3-94....63522
318.21 (a) amended; tables 1 and 2 revised....65260
(b)(1), (2)(ii) introductory text, (3)(i), (vi), (vii), (ix) introductory text, (x)(C) and (xi) revised; (b)(2)(iv) and (3)(xii) added....65262
(b)(2)(ii)(C), (3)(viii), (ix)(C) introductory text, (c)(2)(ii), (3)(ix) introductory text, (A)(*1*) introductory text, (*2*) introductory text, (B) introductory text, (C) introductory text, (xiii)(A)(*1*) introductory text and (*2*) introductory text amended; (c)(1) and (2)(ii) introductory text revised; (c)(2)(iv) added....65263

TITLE 34 Subtitle A—Con. Page

81.27 Redesignated as 81.37..... 43473
81.28 Redesignated as 81.38..... 43473
81.29 Redesignated as 81.39..... 43473
81.30 Redesignated as 81.40; new 81.30 redesignated from 81.20; (a) amended..... 43473
81.31 Redesignated as 81.41; new 81.31 redesignated from 81.21; (a) and (c) amended..... 43473
81.32 Regulation at 57 FR 56795 eff. 1-29-93..... 36870
Redesignated as 81.42; new 81.32 redesignated from 81.22..... 43473
81.33 Redesignated as 81.43; new 81.33 redesignated from 81.23..... 43473
81.34 Redesignated as 81.44; new 81.34 redesignated from 81.24; (a) amended..... 43473
81.35 Redesignated as 81.45; new 81.35 redesignated from 81.25; (a) and (c) amended..... 43473
81.36 Redesignated from 81.26..... 43473
81.37 Redesignated from 81.27; (b) amended..... 43473
(a) and (b) revised; (c) and (d) redesignated as (d) and (e); new (c) added..... 43474
Corrected..... 51013
81.38 Redesignated from 81.28; (b) and (c) amended..... 43473
81.39 Redesignated from 81.29; (a) amended..... 43473
81.40 Redesignated from 81.30 and amended..... 43473
81.41 Redesignated from 81.31..... 43473
(c) revised..... 43474
81.42 Redesignated from 81.32..... 43473
Revised..... 43474
81.43 Redesignated from 81.33..... 43473
Revised..... 43474
81.44 Redesignated from 81.34..... 43473
(b) revised..... 43474
81.45 Redesignated from 81.35; (b)(1), (2) and (d) amended..... 43473
86.405 Regulation at 57 FR 56795 eff. 1-29-93..... 36870
99.5 Regulation at 58 FR 3188 eff. 2-25-93..... 36871

Additions to Table I, December 1993

This table lists the sections of the U.S. Code, U.S. Statutes at Large, Public Laws, and Presidential documents which are being added to Table I as a result of authority citations carried in the **Federal Register** during January through December 1993. Recent legislation is carried by public law number.

Table I is in the CFR Index and Finding Aids revised as of January 1, 1993. Additions during 1992 are in the December 1992 LSA (List of CFR Sections Affected).

In order to determine the **Federal Register** page number of a parallel CFR citation, consult this LSA and the appropriate Annual Issue of the LSA for that CFR title.

Removals from Table I, December 1993

This table lists the sections of the U.S. Code, U.S. Statutes at Large, Public Laws, and Presidential documents which are being removed from Table I as a result of documents published in the **Federal Register** during January through December 1993.

Table I is in the CFR Index and Finding Aids revised as of January 1, 1993. Removals during 1992 are in the December 1992 LSA (List of CFR Sections Affected).

In order to determine the **Federal Register** page number of a parallel CFR citation, consult this LSA and the appropriate Annual Issue of the LSA for that CFR title.
